All that saves is the FCC having to print out and send a modified license.
They'd still have to receive your letter, input the data, and update the
database. With modern dataprocessing, having to do all that but not send a
license saves less than a dollar.
>
>> They can find your transmitter by DF ing, but to send you a letter they

>> address. Or at least a PO box.
>
> Uh huh. And what I proposed changed...what...???

Having the license match the database.

If FCC really wanted to save a few admin pennies, they'd renew every nonvanity
license upon modification. Doing so would eliminate renewal-only transactions.

I guess that's what happens when you have bureaucrats sitting around with
nothing to do except validate their existence as "public servants". Especially
when jobs are scarce and you have mouths to feed.

>In article <5c01b95b.0411260102.38438b4b@posting.google.com>, k4yz@aol.com
>(Steve Robeson, K4CAP) writes:

>> There's nothing "chicken and egg" about it. We were discussing
>>off shore US Amateur Radio exams. Jim chimed in about "CBer's with
>>Extra licenses" on Guam, but not a word about them being FOREIGNERS,
>>which is what >>I<< was addressing.
>
>Ask *him* if they were. I've never been to Guam.

Me neither.

>> Neither you, the other Jim nor Hans have provided a single bit of
>>evidence that the tests administered OFF SHORE (in my definition
>>meaning not conducted under the US flag, regardless if on US soil, an
>>embassy or US military installation) has been done so inappropriately.
>
>What evidence would you accept?

How about some sort of organized survey of the exams? A written complaint
from one of the licensees. A written complaint from someone who's been there
who can attest, first hand, to the alleged improprieties.

Considering the change in recent years over Amateur enforcement, it's time
to revisit the issue with the FCC.

And perhaps a letter to Tom Ridge as previously suggested.

>> No US tickee no US testee. OK G.I.?
>
>Which would put them back where they were before the scam started. If they
>were
>noncitizens and held foreign licenses too, they'd still be hams. All they
>risk
>is their alleged income stream and US call.

But they'd not be breaking US law anymore. Just like the AMERICANS who
ahve been caught doing it in the past, Jim.

>> The whole thread was initiated by Hans' lamentation over >>US<<
>>exams being conducted overseas. US licenses being used by
>>foreigners...Not foreign licenses being used by Americans.

>
>You're missing it, Steve.

Well...I went back and checked Hans' first post. Seems I STILL "have" it,
Jim.

>> No US tickee, no US testee. OK, G.I.?
>
>And that's it. No NAL, no other penalty. If the foreign ham holds a foreign
>license, he/she can still operate.

OK...big deal.

And if he was determined to have broken US law, he loses his US license.
And under the present state of affairs vis-a-vis security, chances are would
face a hard time getting a visa INTO the United States, if DoS was involved.

Also, his loss of revenue from not being able to "conduct" the scam.

>> I'm perfectly cool, Jim.
>
>But you're missing the main point.

No, I'm not.

You think there should be a lot more potent penalty system in place to
hold these persons accountable.

I agree. But under present laws it doesn't exist. And under current case
law, you'd have a hard time getting anyone to do anything OTHER than to revoke
the "examiners" license since that's the precendent the FCC has established.

>> I'm wondering how YOU are going from Hans' lamentations over US
>>tests being conducted overseas to this being a discussion about
>>Americans being able to use foreign licenses here.
>
>It's the difference in consequences.

Again, you'd have a hard time getting a "penalty" any more severe than what
has already been established by FCC practice.

>> A non-resident alien DOES face the same consequences as US
>>Amateurs...Revocation of licensure....Just like the others who HAVE
>>lost their tickets, Jim.
>
>And that's the difference you're missing. A US ham who loses his US license

>based on US licensing, those countries are lost, too. That's why
>he-whose-name-must-not-be-mentioned who lost his license for character issues
>has tried so hard to get it back.

You mean Herb Schoenblohm (sp?) Or Mittnick? Neither of those persons
lost their respective licenses for violating Part 97, Jim.

Neither of them conducted scam VE tests. And Herb HAS gotten his license back, although someone else took his KV4 call last I remember.

>A foreigner who holds dual licenses is not in the same situation.

Granted. But he CAN be made to suffer the same penalty that US citizens have been

>Specifically, there were complaints *in the restructuring comments*. FCC took
>heed of them and acted.
>
>So Hans and Jim and others complain.

Hans' comments, so far, have been limite to this forum. As for Jim's...haven't seen them to establish an informed opinion from...But if they didn't get the desired results the first time, they

>> To act against them where no evidence of misconduct exists is
>>discrimination.
>
>Not at all.
>
>Discrimination is *defined* as unequal treatment without a relevant reason.

Very good.

Are you going to continue to unravel your own arguements, Jim? If so I will just let you and you be alone.....

>> Amateurs getting licnesed today do not face the same conditions
>>you and I faced 20-30 years ago, Jim.
>
>37 years ago in my case. The new conditions are much easier.

And nothing prevents us from making the process more challenging in order to meet the needs of Part 97.

>> New licensees would not face any revocation of service they
>>previously enjoyed. Old licensees would keep their old calls.
>>
>> Big deal.
>
>It's a big deal if you're on the other side of that fence.

>> Enough that the FCC has, on several occassions, demanded to know
>>why a particular licensee made several license changes within specific
>>time frames.
>
>How often has that happened?

It's been in QST, Jim...I am sorry I don't recall teh specific circumstances, but a fellow made several changes under the SEQUENTIAL system and was called on the carpet for it.

>Are you sure FCC didn't have anither reason, such as someone trying to evade
>detection? Example: Someone gets booted off the local repeaters for acting
>inappropriately, then goes and gets a new callsign to hide his identity.

Obviously not. He used the same name and addresses the FCC was obviously
able to get ahold of him at.

>> Then how do you account for guys with "longer" calls that manage
>>to do pretty well in the contests, Jim?
>
>They'd do better with shorter calls.
>
>Look at the leaders and see how many have 2x3s compared to those with 1x2s.

True...but almost every one of those "1 x 2" calls that hit the big time in
every contest are megastations. I bet they'd do just as well signing "K4CAP".

>> Oh well...How many "desireable" 3 calls are in FL, Jim?
>
>Quite a few! Snowbirds from here.

If they are "snowbirds", then they still reside in taht area...just move
for the weather.

>> "Free" to you. It still costs the FCC per-item processed.
>
>The cost is in the handling, data input, materials and postage. Which occur

>license saves less than a dollar.

"Times" how many transactions a year...??? That's a LOT of "dollars",
Jim! Let's say it takes 2 minutes for a quick clerk to do the inputing. I'll
assume that on present GS scale they are making $10/hr. That's about .17/min,
or .34. Postage, bulk rate, already costs them .30 each, so we are up to
$0.60. I bet it's a safe bet that the actual document itself is worth another
.25 to .30/piece. So that's up to $.90 per document. And we haven't even
added in overhead...the computer itself...office costs, etc.

>If FCC really wanted to save a few admin pennies, they'd renew every
>nonvanity
>license upon modification. Doing so would eliminate renewal-only

>transactions.

No arguement from me. It can't be more than a keystroke to do.

>> No, it's not. But under your system, it no longer matters where
>>the licensee is. So let's stop issuing a "6" call to Californians and
>>"0" to Minnesotans, 4 to Tennesseeans, etc...Just start at KC1AAA (or

It would be impossible to levy fines against foreign hams resdiding overseas in most cases. You would only be able to go after their assets in the US, if any. If they have no assets in the US you can't do more than is being done now, unless they voluntarily come to the US. Demands to do the impossible may help some to let off steam, but that's about it.

I would be surprised if Phil were to make an error on this kind of thing.

So, if I now have it right, a GMRS licencee can use all the FRS channels
(aka GMRS interstitial channels) plus the additional GMRS channels between
each pair of FRS channels, can use mobiles with more power than the GMRS
handhelds, and can use GMRS repeaters if they belong to them as paid up
members. IOW, they can do much more than a GMRS handheld provides.

The stores, however, market GMRS handelds as FRS handhelds with more range,
with the minor detail about needing a licence in the smallest possible

print.

If hams were required to change callsigns when moving across district lines,
It's highly probable that there would usually be *no* 1x2s or 2x1s available in
most districts, because they'd all be tied up by current holders or in the 2
year period.

>Even the 1x3s, of which there are 52,728 possible combinations per district,
>are no longer available for sequential issue.

The "no longer available for sequential issue" thing is, I think, due solely to
an FCC decision. IIRC, their computers are not set up to do it. Yet.

Besides, it generates vanity revenue.

>Actually the number of callsigns is slightly smaller since there are certain
>suffixes that for various reasons are not made available for the general ham

My point was simply that even thr Ancient Ones in the BPC times had ways of
finding the rare states.

>Besides that, what's wrong with
>just asking the guy (or gal)?

Ya gotta work him first.

>In addition, if one is hunting states for WAS
>or whatever, monitor the contests that include section as part of the report
>and jump in when you find one. Or call CQ specifically for the states of
>interest.

I've found that in CW SS, section-hunting is usually (not always) a waste of
time. Except for the very rare/difficult ones (NT, NL, AK, PAC [from EPA]),
I've found that simply working everything you can hear will get you 70+
sections. Getting the really rare ones is a different game, of course, but

relatively few are "really rare".
And the rare ones are often easily found by the size of the pileup on them.

In SS 2004, the Type 7 and I worked all states except Hawaii. 100 homebrew watts, inverted V at 37 feet, paper logs and a bug.

Ah yes, "a boy and his radio", not a net-connected, cluster-spoon-fed, computer-dependent robo-station tended by a jumpsuited sycopant "if they're not a W6 they can't be in California" techno-control-geek with thick glasses.

There's hope for radiosport after all!

I quote from a GMRS license (KAE8605) issued (renewed) in June 2002:

Waivers/Conditions:

Effective 2/16/99 the GMRS rules have been amended and you may
operate on any of the primary or interstitial channels shown in
section 95.29. Exception: Licensees who operate north of Line
A and east of Line C may not operate on channels 462.650 MHz,
467.650 MHz, 462.700 MHz and 467 MHz unless your previous license
authorized such operations.

We at the FCC don't care who the Pirate is because afterall, we want to eventually auction off the Ham Radio frequencies to the highest bidder in order to raise money for the U.S. Treasury.

>
> So WHAT do we do to fix it?

We could act like the lobbyists (real lobbyists, not the ones the ARRL
hires.)

Lobbyists rewrite the rules and present a *finished product* to the
Senate so the elected officials don't have to think too much. They
slap their names on the bill as "author."

Look, if the inmates are in charge of the left wing of the asylum
(VEC/Question Pools/Morse-Farnsworth Exams/etc), why can't we simply
rewrite Part 97 and present it to the FCC for publication?

Certainly we have more qualified "rules writers" than that last
restructuring fiasco.

> precedent.

Why must it be in Title 47? US Code doesn't specify what a
"residence" is, or how long it takes for "residency" to occur? It
must.

Hell, even colleges know who is in-state and who is out-of-state.

I was thinking that. But I don't want Tom to go overboard and start
restricting the activities of citizen amateurs in the process, if you
know what I mean.

> > I wonder if any of the 9/11 terrorists or terrorist insurgents in

>
> More socialism, Brian.

Not at all. It is clearly elitism. Notice that Jim did not see a need for the other two (or three if you count the "with Morse Code") license classes to have distinctive callsigns, as is supposed to occur under the present system. He purposely singled out the Extras as being Extra special, and ignored the Generals and "with Morse Code" Technicians high achievements as not special at all.

So if you're going to change the system, make it better, not worse.

Everyone exactly the same no matter what
> they accomplish or how they contribute...?!?! No reward or privilege?
>
> 73
>
> Steve, K4YZ

I think that taking pride in your personal accomplishments should be enough. Government sponsored merit badges are a bad use of limited resources. Of course, there are always people wanting the government to give them special dispensations because they "feel" they are owed it or they think they are better.

Of course I know that, if it is all true. As for retaining a DC Communications firm, I have no knowledge of this. If MAN did indeed do this, which is likely considering his antics of late, then you are likely accurate....unfortunately.

> really need to get an $80 5-year license from the FCC?

If you don't use them on the 8 GMRS-only freqs, then no, you DON'T
NEED A LICENSE! Use them on the 14 FRS freqs, when Tx power is
limited to 500mW.

> What does the
> license protect against?

Look - it was a GIMMICK instituted by the radio manufacturers to allow
them to advertise their FRS radios as having more range (a few more
milliwatts of Tx power), and more channels (8). There is NO VALUE
ADDED in the gimmick, you get virtually no better range, and the extra
8 channels aren't worth the $80.

> No, I'm not.
>
>You think there should be a lot more potent penalty system in place to
>hold these persons accountable.

No, I think the rules need to be changed. Specifically, someone who is neither a US citizen nor a resident of US territory should not be allowed to hold a permanent US ham license, nor to function as a VE. IMHO.

>I agree. But under present laws it doesn't exist. And under current
>case
>law, you'd have a hard time getting anyone to do anything OTHER than to

> Hans' comments, so far, have been limite to this forum. As for
>Jim's...haven't seen them to establish an informed opinion from...But if they
>didn't get the desired results the first time, they

Point is, there was enough complaining to FCC about multiple choice code tests
that they were eliminated. If there's enough complaining about nonresident
aliens being VEs and holding permanent US licenses, those rules can change too.

Consider what most countries outside the US do when an American wants to
operate. They issue a license good for a specific short time, based on the
valid US license. There's usually a fee in good old US dollars. American gets
to operate from Lower Podunkia and everyone has a good time.

Why can't we do the same thing?

>>> To act against them where no evidence of misconduct exists is
>>>discrimination.
>>
>>Not at all.
>>
>>Discrimination is *defined* as unequal treatment without a relevant reason.
>
> Very good.
>
> Are you going to continue to unravel your own arguements, Jim? If so I
>will just let you and you be alone.....

How am I unrvavelling anything? Being neither a resident nor a citizen is a
valid reason to deny a license. IMHO. YMMV. LSMFT

>>> Amateurs getting licnesed today do not face the same conditions
>>>you and I faced 20-30 years ago, Jim.

??

I meant detection by other hams. Most hams just use their first name on the air
- but I know a few who use their middle name. There's no rule that sez you have
to use either.

Suppose KC3@#$, "Bill" gets booted off the repeaters. Couple weeks go by, then
KD3!$^, "Tom", shows up. Who is to know they are the same person without
looking them up in the database, and discovering that they're both William
Thomas Bfztsplk?

>>> Then how do you account for guys with "longer" calls that manage
>>>to do pretty well in the contests, Jim?
>>
>>They'd do better with shorter calls.

>>Look at the leaders and see how many have 2x3s compared to those with 1x2s.
>
>True...but almost every one of those "1 x 2" calls that hit the big time
>in every contest are megastations. I bet they'd do just as well signing

"K4CAP".

Part of being a megastation is going for every advantage. Including length of callsign.

>>> Oh well...How many "desireable" 3 calls are in FL, Jim?
>>
>>Quite a few! Snowbirds from here.
>
> If they are "snowbirds", then they still reside in taht area...just move
>for the weather.

Some have residences both places. Others visit with friends or relatives up here in summer, then go south during the cold. Under your plan, they'd be forced to lose their call, or lie to the FCC.

>>> "Free" to you. It still costs the FCC per-item processed.
>>
>>The cost is in the handling, data input, materials and postage. Which occur
>>in all transactions.
>
>Which would be direcetly paid by the applicant if they wanted a call
>otehr than the 2 x 3 they were issued.

Where's the extra cost?

The computer system is set up to grab the next call in the sequential line automatically when a new license is issued, or when an upgrade occurs and the applicant requests it. One check box on the application.

>>> I said attach a copy to your original station documents. You'd
>>>still send it in, and the FCC could update their records. They just
>>>wouldn't necessarily sned out a new document with each and every
>>>modification.
>>
>>All that saves is the FCC having to print out and send a modified license.
>>They'd still have to receive your letter, input the data, and update the
>>database. With modern dataprocessing, having to do all that but not send a
>>license saves less than a dollar.
>
>"Times" how many transactions a year...??? That's a LOT of "dollars",
>Jim!

Not really. Look up how many modifications are done a year. Remember that a good number of them are upgrades.

>Let's say it takes 2 minutes for a quick clerk to do the inputing.

A lot of it is online that doesn't require a clerk at all.

>I'll
>assume that on present GS scale they are making $10/hr. That's about
>.17/min,
>or .34. Postage, bulk rate, already costs them .30 each, so we are up to

>$0.60. I bet it's a safe bet that the actual document itself is worth
>another
>.25 to .30/piece. So that's up to $.90 per document. And we haven't even
>added in overhead...the computer itself...office costs, etc.

Most of that cost is still incurred whether a modified license is mailed or
not.

>>If FCC really wanted to save a few admin pennies, they'd renew every
>>nonvanity
>>license upon modification. Doing so would eliminate renewal-only
>>transactions.
>
> No arguement from me. It can't be more than a keystroke to do.

I think they don't do it because of the vanity system.
>
>>> No, it's not. But under your system, it no longer matters where
>>>the licensee is. So let's stop issuing a "6" call to Californians and

That's how the MURS - non-licensed VHF low-power radios - came
about. They were originally license-required Business Radio
channels but E.F. Johnson and Motorola wholesaled their overrun
but under-selling "el cheapo" handhelds out to Costco and Wal-Mart
(remember the "color dot" and "jobcomm" radios ?) and the rest is
history.

No, it was not due to an FCC decision. They used them up.

Figuratively speaking, I was there, as they say, at the point in time when they ran out. Sequentially available 1x3s ran out in most districts in '92, '93, or '94 (some districts were slower than others and some may have gone on slightly longer). My call is my original one issued in 1992 and as you can see from the fact that it is N8UZE that they were already close to the end of the 1x3s in district 8 by then. My daughter's call sign, issued in 1993, is N8ZNW. The pattern of issue was first to use W calls, then K calls, and finally N calls. Slightly off topic, 2x3 calls being issued at this time are still in the K sequence.

For a while, I followed the call sign usage just out of curiosity to see when they would run out.

The biggest reason that I did not change my call sign upon getting my Extra was that district 8 was out of 1x2 call signs by the time I passed my Extra test in late 1992 (upgraded license was issued in early 1993). I had no interest in Extra class call signs in the 2x1 or 2x2 format.

Heck, no one wants hf (at least around here - and the FCC has no authority in Africa). It is VHF and above where the money is. Who wants a cell phone when someone can come on yelling "audiooooooo ..." from 5 states away? Nope, hf bands are probably *reasonably* safe. My bet is that 220 and 440 are the next to get hit, but I hope I'm wrong.

3965 kHz is inside a broadcast band in the rest of the world - it's only the USA that have 3500 to 4000 kHz as an amateur band. In the rest of the world, the amateur band ends at 3800.

There are many Euro-pirates that broadcast around 3900 - some with quite high power, and many of which have been heard worldwide.

An excellent reason to never issue a U.S. call sign to a Japanese ham.
There is no circumstance where they'd NEED a U.S. license, because
they can operate in the U.S. or in any U.S. territory with their
Japanese license. Throw stroke whatever on the end of their JA call
and they're good to go. No paperwork required, no resources wasted.

>So maybe you'd like to ban VE tests held outside the US? That would be hard
>on your military. How do you get licenced if you are posted somewhere that
>you don't speak the language?

No, I wouldn't. You go to the U.S. Embassy or a U.S. military base and
take the test. Think about this - How do you pass a test in Japan
that's in English if you don't speak English? Remember that song from
the 70's? With a little help from your friends?

>Another suggestion I saw in this thread was to stop aliens from being VEs.
>I don't think that would fly constitutionally speaking either.

You're missing the whole point, Alun. The U.S. Constitution does NOT
apply to Japanese nationals who live in Japan. You live in the U.S.
You're a VE, and help other VE's in the U.S. give tests. That's
wonderful, and the fact that you're not a U.S. citizen doesn't bother
me a bit. I'm not a lawyer, so I'm not sure you have any
constitutional rights in the U.S. or that you were allowed to vote in
the presidential election, but that's not the point here.

If three Filipino's give a VE test for licenses in the Philippines,
that bothers me. If three Japanese hams give a VE test for U.S.
licenses in Tokyo, that bothers me. And I'm sure it would bother a lot
of other hams in the U.S.

>So, what do you seriously suggest?

Cut out the world wide bogus VE testing. If you are U.S. military or
U.S. civilian overseas, you go to the U.S. Embassy or a U.S. military
base and take the test. And you prove to the people administering the
test that the address you put on the 610 form is REALLY where you
live, and not a P.O. Box at Mailboxes Plus that you and your buddies
chipped in to pay for, or the P.O. Box number of the Guam QSL bureau.

>I don't really think anyone cares if someone in Japan can get a call that
>belongs to the mainland US.

I think if you did a poll of U.S. hams, you'd find that thinking is
way out in left field.

Maybe it'll help you see the big picture if we sum it up one more
time:

If you are a ham from ANY country and you LIVE in the U.S., and you
can't operate in the U.S. under CEPT agreements, then by all means you
should be allowed to take the test (in the U.S.) and get a U.S.
license.

BUT - If you're a ham that lives in the Philippines, and you think it
would be neato keen kool as a moose to have a U.S. license just for
the hell of it, you should NOT be allowed to get one - and most
certainly not when the test is given by three other Filipino hams who
have never been to the U.S. but somehow managed to get U.S. licenses
and sign up with W5YI.

Wouldn't it have been nice if all the final exams we took in school
were administered by our classmates at the bowling alley on Saturday
night with no teachers around to watch? I bet if we used that system,
it wouldn't have taken me eight years to finish high school.....

AND - If you are a Japanese ham that lives in Japan, and you think
that it would be kewl to have a U.S. license so that when you go to
VP9 for vacation you can pretend you're from the U.S. so you're
allowed to operate in VP9, or because a U.S. call would look kewl on
your QSL card, you should NOT be allowed to get one.

Nobody has a problem with hams that are REALLY in the U.S. getting a
license, no matter where they were born and raised. It's not a
citizenship thing. Nobody has a problem with you getting a license in
the U.S. even though you don't really need one, because you ARE in the
U.S.

The problem is with hams who have NEVER been in the U.S., or never
intend to BE in the U.S. getting licenses they don't really need or
ever intend to use in the U.S. OR that they intend to use as an
International Radio Passport.

Example: All the KH0/KH2/KH7/Wxxx calls issued to JA's. Some of them
operate in Guam or Saipan, once, or once in a while. Many don't ever
operate there. Now that the CEPT agreement covers Japan, they don't
NEED a U.S. license so it's a waste of resources and call signs to
issue them one and it allows them to falsely present themselves as
U.S. hams in other countries to obtain reciprocal operating privledges
that they couldn't get with a Japanese license. Before CEPT if they
wanted to operate in Guam, they had to get a U.S. license or a
reciprocal license. Those days are over.

Why shouldn't 3 JA's be allowed to test me for a U.S. ham license in Japan? The same reason I can't take a test for a Florida drivers license in Japan at the Tokyo Motor Vehicle Department. Because it makes no damn sense.

You need to rethink your list, Hans. WH0V and NH0F have been living in
Saipan for years, as have a few others on that list. The ones that
start with Yoshi and Toshi at QRZ.com probably don't live there :-)

Saipan is not a U.S. territory and they make some of their own rules
about immigration and working there, so there are a lot of guys from
the P.I. that live and work in Saipan. Probably 90% of the ham
population in Saipan are Filipino. But then again, you are correct in
assuming that probably 90% of the hams with KH0 calls couldn't find
Saipan on a map.

What I was trying to describe is that while FCC may have issued all of the
1x3s, they're not all in use. Once upon a time, when, say, W8ZZZ was reached,
FCC would go back to W8AAA and "fill in the gaps". This was done sequentially -
you didn't get a choice.

Of course that sort of thing takes resources and also reduces the demand for
vanity calls.

That specific change would probably get through the lawyers. I can see a
couple of downsides to it, FWIW. Firstly, VE teams serving Americans
overseas could no longer make use of any locals as VEs. Maybe they don't
anyway? Secondly, foreign-based DXpeditions to rare US islands would have
to recite a portable call.

>>I agree. But under present laws it doesn't exist. And under current

AFAIK, the NCVEC eliminated those tests, not the FCC

>

There are almost as many ways of doing this as there are countries.

The UK has no reciprocal licences per se, only permanent or temporary licences. If you give a UK address you can get a permanent licence, which is the same licence you get for passing a test. If not, you get a temporary licence with a portable call. Either way there is a fee, and for the temporary licence you pay the regular annual fee for only six months.

For a while I held a second UK call (G0VUK) based on my US licence. However, since the code test was abolished my original call (G8VUK) has full operating privileges.

Some countries issue visitor's licences with a distinctive call. For example, my Irish call is EI4VXI. The V is for visitor. It is free for upto a month, and costs progressively more for longer periods, and I can get the same call back on subsequent visits.

I beleive that the latest ITU conference authorised calls with four call letters. That would make possible a visitor's call like, say, KH2VXYZ! I doubt that the FCC would be interested in administering this or collecting the money, so if it were done it would have to be done through the VE system. I can even envision that the FCC wouldn't have any record of these calls atall. They probably wouldn't fit in their database. Perhaps the NCVEC could keep track of them? Just a thought.

I don't think much of that either. There's a possibility of me moving to
Michigan. I wouldn't want to give up N3KIP for some KI8@& call. I prefer a
1x3 to a 2x2, and I don't want to pay for a vanity call.

In my case I didn't know whether I would get, say, WZ3Z or AA3AA. I particularly didn't want a 2x1, as they seem to me to be 'back-to-front'. A 2x2 would have been OK, but they are no shorter than a 1x3. A friend of mine, who upgraded at the same time, in fact got AA3BS. That could have been me. Everyone phoneticises his last two letters as 'Bovine Scatology'!

>>So, what do you seriously suggest?

I call this the Ferner radio act of 2005:

The first thing that must be done is to determine what is a desirable callsign.

Although we can't tell in all cases, most would agree that:

1X2
2X1
1X3
2X2

are the most desirable

2X3 licenses are the least desirable of the lot.

But! some may find them desirable.

So in the interest of finding the least desriable callsigns for ferners to use, I would suggest that we make a new class of 5X5 callsigns.

This would keep the callsigns away from the prefixes already assigned to the different countries, and would eliminate any question of ferners gobbling up those desirable ones.

It will be important to have an oversight committee set up to make sure that the callsign is not accidentally desireable. Efforts must be made so that no feren ham has his or her initials in their callsign.

All testing must take place at an embassy, and be approved by the respective countries legislative branches, as well as the respectice countries radio commissions.

The ferner must pay for a specially trained and reputable VE to be flown to the place of testing.

How's that?

I am not a lawyer either, but FWIW resident aliens do have constitutional
rights under the due process clause of the 5th amendment and under the
equal protection clause of the 14th amendment, although the latter only
applies to the states and not the feds.

You're right about aliens overseas not having constitutuonal rights,
though.

As for voting, there's nothing in the constiution to say that aliens can't vote. As we all know from the last two elections, voting is administered at the state and local level, not by the feds. Here in Maryland, aliens can vote in city elections in Takoma Park, but that isn't where I live. I understand that as recently as the 19th century many states did allow aliens to vote, which may have made sense when everyone was an immigrant.

Come to think of it, as equal protection under state law does apply to aliens, how long will it be before someone tries to file suit to get voting rights for aliens, maybe even illegal aliens?

There are some great Dutch and German ones on that band, as well as UK stations like "Radio Skeleton" which is usually just some guy waffling on. A bit Wogan-esque without the in-jokey hyperbolic conjecture, excepting the joke in the nomenclature, being that it's the "bare bones of a radio station". Well, it was funny the first time.

By the way, I heard that in the UK, they are going to throw the licensing of hams over to the RSGB, which is a sort of self-appointed amateur radio regulating body. I don't know how true it is, but these days more than ever in the UK, you can't believe anything you see or hear!

Anyway, who cares about licensing as long as nobody gets hurt? Sounds like the RA only bother about it when it suits them. Or possibly more accurately, when it suits the treasury.

That would be intelliegent, using a frequency out of either the ham bands
or CB, and then signing an FCC call for easy ID!

LATEST K1MAN NEWS

ON THE WEB:
QRZ.COM WEBSERVER DE-LISTS K1MAN

QRZ has removed the listing of International Amateur Radio
Network net manager Glenn Baxter,
K1MAN, from its database.
Fred Lloyd, AA7BQ, says that he
took the action because the staff
at QRZ reached the collective
opinion that K1MAN does not
represent a view of amateur
radio activities that is
conducive to the furtherance
of the hobby. In other words,
Lloyd said, "We dont think that
he represents the true nature of
the hobby and in many ways may
be detrimental to it."

BAXTERS RESPONSE TO QRZ DELISTING

Baxter called QRZ posters who
commented on the delisting
"American Amateur Nazi Party
Members." Those members are,
according to Baxter: WA8MEA,
K1XS, K4FSC, K7JBQ, K8SOR,
WB2WIK, K9RIF, W5DHM, K3UD,
W6EM, KG6JEV, KI7DG, K3ESE,
N0NWO, N3IVK, KC0SUZ, KJ0L, KD5OLK,W4AMP, K9REH, K7JAZ,
KE4UMD, K7OV, K1KW, W0MT, AD6JZ,
KC4WMS, K3VR, WS5X, N7SPY,
KD5PSH, N8CPA, KB2KAB, KC6VJD,
K7UNZ, K7JAZ, W4NTU, N0KLT,
WD4HXG, KC0KBH, KD5FOY, K2WH,
N2ACX, NF0A, K3WQ, KV9U, KC2KVZ,
K0ZL, W7TUX, AC7DX, AE4FA, K9JRN, KB5CQF, KA1KJZ, KA9RFE, KC2IFR,
WD8KDG, KU4GW, WS5X, K1LWI,
W0PEE, W8CEI, KT0DD, W5MMX,
K7ABV, N3JJA, WD4AWO, ND8V,
N9CJT, K1EEA, K4KIO, KC2EGL,
K8SWL, N9VO, W5JON, KB1GYQ,

KC9GGV, WX7B, KG4ZYY, WD8OQX,
WG5B, K3EKO, NJ5R, N0ZU, KC9AAE,
N0ZU, WB5HZE, NJ5R, KF6WTC, K3PD, KB0UZR, ON6ZK, WB4TJH, WD8BIL,
KE1LP, N0NOP, W1NK, KD4LEI,
MW0HRD, WB4THJ, KE4PJW, W9GRN,
WS4Y, W4IKO, N0ZU, KB9LQC, W0LC,
and AC7DX. Some time after
dozens of complaints were
sent to AOL and MAINEHOST,
Baxters ISP and server, the
word Nazis was changed to Nerds
on Baxters webpage. GOOGLE
continues to cache the original defamation.

ACCORDING TO THE IRS: THE IARN
COULD LOSE ITS STATUS AS A CHARITY

The Internal Revenue Service
has reportedly notified Glenn
Baxter that he must obey Federal
Laws regarding reporting of
tax information to those who ask
for it. According to the IRS,
If Baxter does not obey Federal
Law, IARN could be in danger
of losing its charitable status.
The IRS tells noncompliant
charities: "You may be liable
for fines of twenty dollars
for every day you fall behind
in providing the information,
up to a maximum of $10,000
per return. In addition, a
$5,000 penalty for "willful
failure" may also be applied."

AT THE FCC: K1MAN RECEIVED
WARNING LETTER

On September 15th, the FCC
informed K1MAN that they had
received approximately a dozen complaints that Glenn Baxters
Amateur radio stations
transmissions started while
the communications of
individual operators and groups
such as the Salvation Army Team Emergency Radio Net were
ongoing. K1MAN was warned that publishing a "transmission
schedule" does not give him
the right to begin transmitting
on a certain frequency at a

certain time if there are
ongoing communications on
that frequency. The letter went
on to ask K1MAN for the name,
address, and callsign of the
control operator(s) at K1MAN
and told him "that a willfully
false or misleading reply
constitutes a separate violation
made punishable under United
States Code Title 18, Section
1001. Failure to reply also
constitutes a separation violation
of Commission rules."

ON THE AIR: OBSERVERS SAY
K1MAN APPEARS TO BE BROADCASTING

Complaints have been sent to
the FCC regarding observations
that K1MAN appears to be
broadcasting, in violation of
97.113b. A partial list of
topics on this weeks K1MAN
talk show appear to indicate
that K1MAN is broadcasting vs.
airing an amateur bulletin:

American aircraft carriers
similarities between Canadians
and Americans Americas defense
of western Europe the Canadian
medical system vs. the American
medical system the war in Iraq Canadas refusal to engage
in the war in Iraq Canada
and Americas difference on
opinion on the Iraq war
French foibles German stupidity Imperial Hubris Hillary
Clintons effort to reform
American medicine oil reserves
running out heating our homes
and driving to work the white
man disappearing when the oil
runs out Karols investigative journalism piece called The Life
of Riley conspiracy theories
regarding Freedom of Information
Act requests a callers opinion
that Glenns mother should have
aborted him noted racist Daniel Carvers phone number:
770-967-3479, the indecent
expression "Why dont you

piss Hollingsworth off some
more," etc. Bulletins are defined
as "a message directed only to amateur operators consisting solely of
subject matter of direct interest
to the amateur service."
(CFR 47, Part 97.3, Definitions)

K1MAN BROADCASTS OBSCENITIES AND TELEPHONE CALLS WITHOUT CONSENT

Telephone calls from K3VR, WD4AWO,
and ND8V were aired on the K1MAN bulletin without the consent of
those callers. This practice is
a felony in the states of
Michigan and Pennsylvania.

Two phone calls broadcast last
week on the K1MAN talk-show were apparently indecent and obscene.
K1MAN broadcast the words,
"Glenn, you think you know who
the radio nazis are, you dont
have a fucking..." and
"Youre about as welcome on 3890
as a fart in church."

IN MAINE: COMPLAINTS TO THE BOARD
OF PROFESSIONAL ENGINEERS

Complaints have been sent to
the board of registration for professional engineers in Maine regarding Glenn Baxters
latest
bout of defamation. Baxter
apparently violated section
14 III c. of the professional
code of ethics which prohibits
injuring, maliciously or falsely, directly or indirectly, the
professional reputation of other registrants. W. Lee McVey, P.E.,
was one of the hams called a Nazi by Baxter who objected to that characterization.

INTERFERENCE FROM K1MAN CONTINUES

Numerous complaints have been sent
to the FCC about Glenn Baxters interference to ongoing
communications. Several
stations operating on 3890,
3975, and 3977 KHz have
recently sent complaints
to the FCCs Chief Enforcement
Officer, Riley Hollingsworth. Mr. Hollingsworth acknowledges that
this is an ongoing investigation
that also involves the Maine
Department of Justice.

>1x3 to a 2x2, and I don't want to pay for a vanity call.

Well, there you have it. I consider myself lucky to have gotten a 1x2; 2x1s sound backwards to me. As in "where's the rest of it?"

All this concern about callsigns isn't limited to hams. The BC folks have been at it for years, since certain callsigns are considered much more desirable than others in that service. Calls like KISS, WARM, WOW, WHY, WHAT, WHEN, etc.

I recall reading that the original allocations of all-letters-begins-with-W-or-K callsigns were to ships. When a ship sank, its "unlucky" callsign would often not be reassigned to a new ship, and often wound up assigned to a shore or BC station. Anybody confirm this story?

Personally, if radio saved a ship's crew, I'd consider that ship's callsign lucky!

Oddly enough, I don't think any real BC station has ever held WKRP.

The FCC never specified the format of the code tests as administered by the VECs only the code speed. Initially some required solid copy, others had mutiple choice questions, and others had fill in the blanks. Eventually the council of VECs agreed upon using fill in the blank questions only with candidates also able to pass with solid copy if they did not get 7 out of 10 questions right.

Sounds good, but I'd be putting in jeopardy my commercial license as well as my amateur license. I can't do that. I obtained my 1st class radiotelephone license in 1966 (now a GROL), my commercial telegraph license in 1966, and my amateur extra. Although I let the telegraph ticket drop, I cannot jeopardize my other licenses.

Best regards from Rochester, NY
Jim AA2QA

BAXTER WILL LOSE HIS LICENSE SOON.

Now Woger, do you want Chief Stenger
to lock you up again? You know
how you had an awful fit last time
and shit your pants when they put the cuffs on according to Pancho!

Youve been anaughty boy impostering Lloyd and getting Jon upset.

You must be miserable without Pam to kick around and without your
adoptive Mommy to beat up.

Do I have to call Riley and tell
him youve been qrming again
two-test?

Now fuck off you stupid corn hole
and get back behind those curtains!

Baxter is a fool and a menace. Get it
dickhead? Now if you cant
leave an intelligent comment, you
should go back to Belmont Tech and
take a creative writing course.

-Gino Paris

PS Dont make me come over again
this Christmas.

> I couldn't agree more

I couldn't agree less ......any call that starts with a N is bogus in my book ....those LETTERS belong on the tail of
a 1905 Wright Flyer not flying through the sacred ether. I got my call after a few months of having my extra and it was granted in sequence ....
I was going to keep my WA3PPS but it just got too cumbersome.

In all seriousness I could care less about who has what or whatever ...I just like the variety out there and am actually entertained by some of the really cumbersome CW calls out there. I rarely get on phone but I do get K13R from time to time from an old-timer .....good for a chuckle. I tell them the 13th call district is SW Pa. Now if I could only get up a decent antenna .....another story for another time.

Take care guys .... God Bless ..... Tom Popovic KI3R Belle Vernon Pa.

Three things: First of all, I am working, and didn't have time
to comment at length on the entire post.

Secondly, I only copied the text to which I was specifically
replying. Why re-quote the entire post just to make a couple
sentences worth of reply?

Lastly, when I ahve a chance to sit down to the rest, I will
answer the rest. Were the comments I supplied above not direct, to
the point and understood?

And your comments are NOT "poof...gone", Brian...They're still
right there on Google for anyone who wants to review them...as always.

Perhaps someone can explain this to me.

Why do people who obviously have a interest in radio (other than breaker ten four skipland sort of crap) and who have the ability to operate a mode, other than voice, operate on a illegal segment of the spectrum?

Why not just get a ham ticket? I am serious here, I simply do not comprehend the reason or intent.

The Radio Brotherhood Packet Net is completely legal and has
been given special permission to operate on 27545 for the
purpose of promoting harmonious relations between the radio
services. Check it out. Whats the harm? Go to net freq.,
27545 and start copying the packet there. You will see ham radio
call signs freely mixing with CB calls. You do know how to work
packet now, don't you?

Please cite the government document that grants such permission and list the website where it is shown so that anyone interested can verify that and not risk their license.

There's no bluff to call, Master Grief.

I have already deleted the letter I got from the League, but I believe it
was a 92 or 98 issue. Call it whatever you care to, but being "called" by you
is the LEAST of my concerns.

Have fun.

Do you also have a failure of comprehension for why people speed on the highway, ride motorcycles in the upright position on the highway, drink and drive, steal, cheat on each other, murder, do drugs, etc.? I'm not a betting person, but I'd be willing to put my chips on the marker that says, "they are all of the same mentality."

By the way, did you single out even those who have an interest in CB radio as being some kind of delinquent or moral neophyte? Or, did you single them out because you figure all persons interested in CB radio must break the law? I am serious, too, I have a failure to recognize your intent to differentiate.

That wouldn't really be required (being provided the information). All one
need do is check on Page 21 of the current version of the FCC Online Table
of Frequency Allocations. ;) However, this would be only for United States
radio operation.

Convenient, Steve, but fortunately Google didn't also delete the letter.

QUOTE

Steve,

I have a couple of possibilities for you:

Jul 1992 QST p 40--Wally and Mike: The Podunk Repeater Club--Kearman,
Jim, KR1S

May 2000, "Correspondence," "No Lids, No Kids, No Space Cadets" by Dave
Mitchell, K8DM

If that particular installment of "Wally and Mike" isn't the one you
remember,
it may have been another in the series. Search the on-line index for
author
KR1S and you'll find the others.

Hope this is helpful.

Kim,

You're the one (not Dan) who "singled out" anyone. Dan's question never mentioned (or even alluded to) muderers, spouse-cheaters, speeders, druggies, drinkers, or other lowlifes. >>You<< interjected them into the conversation.

Dan's question >>IS<< fascinating. Why do folks, who have an obvious radio interest and the technical curiousity to explore and master communications modes beyond mashing the PTT button, choose to operate on an illegal segment of the spectrum rather than get a ham ticket?

Perhaps the answer lies here
Why do people run stop signs
Why do people speed
Why do people cheat
Why do people drive without a license
Why do people short change you intentionally
Why do some people hate authority and the laws of the land
Why do people ______. Fill it in

Guess some people are no damned good, stupid, or nuts
Some people are risk takers in breaking the law
Some folks are just too lazy and unmotivated, want something for nothing
Some folks get away with whenever they can
Some folks rationalize ways not to obey the law (read that one again)
Some people love the POWER of hitting the PTT and taking control -- they can talk and no one can interrupt
And all this has nothing to do with being a CBer or ex CBer, technical or non technical
But most folks are pretty good people

It is just that Folks sure are different

We have 400+ folks in our ham club, some of the best operators and contributors are ex - CBers.
Many get their lips wet by joining ARES and RACES.
Many have gone on to get an HF upgrade and are good operators
Many help with PR work
And some of the old time Extras (90 wpm code speed - sic) in our club --- do nothing.
But many of our old timers are excellent elmers, instructors and are the backbone of the club.

When you put people in a box -- you do a great disservice to those who studied hard (perhaps with no technical background), they passed the current licensing requirements and should be congratulated and not put in to a box or a gross generalization.

The Keyboard having typed -- moves on and ignores the onslaught of flames
--
The Anon Keyboard
I doubt, therefore I might be

I think I can handle it. Since I was one of the first stations on packet in this area back in the 80s. Even built up the TNC kit from heathkit. And guess what I used my TRS-80 computer with Autoterm for the program. Now I have a KAM TNC and the TRS still works. But I don't use it with it now of course.

The major problem I have is this. You sir, are full of crap. There is NO special authorization, if you believe that, then you are a fool, a ignorant one at that.

No sir, I spent too much time getting my Extra class, and have been a Amateur Radio Operator since the age of 14. So I have no desire to lose my license to satisfy some idiotic fault in YOUR personality.

You continue to march. But thanks for the tip. I will certainly 'pass it along'.

Now could you answer my question please?

Have a good day.

Dan/W4NTI

In my over 40 years of listening to the radio spectrum. And transmitting on
some of it as a licensed operater, I have never heard a legal conversation
on CB radio. With but ONE exception.

That was in 1960, when CB was all new and unspoiled by the clowns. That
was when I was at a Civil Defense Headquarters and was a operator on it.

Yes that's right, when they operated with call signs, such as 19Q5343. And didn't have noise toys, echo boxes, cussing a blue streak, everyone talking with a psuedo southern accent.

And yes I put all CBers in the same box. IF they were serious about legal communications, they would NOT BE ON CB. Especially now a days. With FRS, GMRS and oh yes the no code Tech give away license.

Any other questions ???

That question has always intrigued me, too. Here are some possibilities:

- No test at all. No learning stuff you think is irrelevant - code, theory, rules, whatever.

- No having to tell "the government" your real name, address, SSN/TIN, etc.

- No limitations to bands, modes, power, content, etc.

- A lot of those folks came from cb, where the prevailing culture has long been to pretty much ignore regulations you don't like. Going "legit" would mean giving all that up, because as AA2QA notes, *any* illegal operation puts your FCC license at risk.

A ham or GROL holder caught "freebanding" is arguably in a worse spot than an unlicensed person from an enforcement point of view. The unlicensed person can argue that they didn't know it was illegal, and may get off relatively lightly on a first offense. But an FCC licensed op is expected to know more!

Because...for those who can't think more creatively: it is either the thrill of doing something you're not supposed to be doing, or the thrill of doing things illegal. THAT is the correlation that was being made. That you didn't get it, Hans, is not my problem.

Oh, for god's sake. You and Hans really need to lighten up, Dan. Since I have referred to an official document of the FCC, don't ya connect the dots to the idea that I know it is not authorized, Dan? Now, as for trusting you...not likely.

I'll make a snide comment here to Hans to help him realize the degradation you intended by singling out CB operators. As for your not ever hearing one legal conversation on CB radio, then you live in an area of thugs and thieves and I'd run just as fast as I can if I were you, Dan. Because around here, back a few years ago, Channel 32 LSB was nothing but conversation between family and children every evening. What we did that day, recipes, sports, shopping--it was a roundtable of conversation just like we'd all have had if we were all getting together as a guest in one of our homes. In fact, that was kind of what it was like, every evening. Visiting with all the great friends and families. Then, nearly all of us became amateur radio operators.

So, I ask you, Dan. WHY would anyone with the above itinerary NOT use CB radio? And, what, Dan, exactly is illegal about any of the conversation I mentioned above?

Questions? Yeah, answer the above question--WITHOUT any of your slurs and crap. Can't do it, can you. Don't bother to answer if you can't. I cannot believe that after all this time anyone is still bellyaching over the No Code Tech License. You remain a hilarity.

The funny thing is that calls with digits after the prefix are not allowed on planes by ITU rules. In fact the amateur service is pretty much the only service where FCC calls actually comply with ITU rules, almost all the rest are in violation.

The correct ITU format for a plane would be like N-ABC for example, where the dash _is_ a dash, not a placeholder for something else. That's the sort of call you'll see on planes of all other nations, if you should chance to hang around an international airport.

Kim,

I'm not sure why you're personalizing this with snide comments about "my
problem" and "can't think more creatively", so I'll ask my serious question
again in simple, non-demeaning language ---

"Why do folks, who have an obvious radio interest and the technical curiousity
to explore and master communications modes beyond mashing the PTT button, choose
to operate on an illegal segment of the spectrum rather than get a ham ticket?"

These folks have (whether you agree with them or not) built up a somewhat
extensive 'amateur-radio-like' environment, including use of digital modes,
organized DXpeditions, QSL bureaus, and call-sign structures among other things.

Why did they choose a small (and illegal) portion of the spectrum (with
not-particularly good propagation reliability) for their operations, rather than
simply getting an amateur license and enjoying dramatically expanded (and legal)
room for their obvious love of radio?

73, de Hans, K0HB

Could you post the FCC document that gives you this special permission?

Seeing ham radio call signs does not mean:
1) They are legitimate call signs
2) If legitimate call signs, that the particular holder of that callsign is the individual sending out that callsign.

I've heard bootlegged calls - one back in 1964, so it is not something new. That idiot happened to be "borrowing" the call of a good friend of mine who lived about 2 miles away. A signal of around S-2 was not originating 2 miles away. These are folks that want to operate ham radio but don't want to expend any energy at all to get a license.

Best regards from Rochester, NY
Jim

Can anybody hear this "net"? QTH here is south Texas, and I am
copying some packet on 27545. I am listening ONLY, and am
NOT transmitting! There are several stations, using call signs.
Sigs here vary from QSA1 to QSA5 with a load of QSB. If
anybody is interested, I will post some of the traffic extracts I am
copying?

Dave

[UPDATE] HOUSTON, TX: The FCC sent an Official Notice of Violation April 2 to Technician licensee Leonard Martin, KC5WHN, for unlicensed operation February 27, on 27.535 MHz (Industrial Radio Service) and 27.545 MHz (US Government) and March 15 on 27.370 MHz (CB guard channel), and for refusing a request by FCC Field Office personnel to inspect his station. The FCC's Riley Hollingsworth, K4ZDH, reports that he has spoken with Martin on numerous occasions. Field Office personnel in Houston monitored Martin and located him using direction-finding equipment on two occasions. He was interviewed by Commission personnel and local police officers, but the FCC says he refused to allow an inspection. The FCC had warned Martin in writing last November 3 about operation on amateur frequencies (20 meters) other than those authorized under his Amateur Radio license. The FCC has requested that Martin reply in writing within 10 days to the FCC's Houston Field Office explaining specific actions taken to correct each violation and to preclude recurrence.

WALLER, TX: The FCC sent an Official Notice of Violation April 2 to General licensee Greg F. Nolan, W5UDX, for unlicensed operation after FCC Field Office personnel monitored his station February 27, on 27.535 MHz (Industrial Radio Service) and 27.555 MHz (US Government/Forest Products Radio Service). The FCC has requested that Nolan reply in writing within 10 days to the FCC's Houston Field Office explaining specific actions taken to correct each violation and to preclude recurrence.

HOUSTON, TX: The FCC sent an Official Notice of Violation April 2 to Technician licensee Daniel R. Furman, KD5BCI, for unlicensed operation after FCC Field Office personnel monitored his station February 27, on 27.535 MHz (Industrial Radio Service) and 27.545 MHz (US Government). The FCC has requested that Furman reply in writing within 10 days to the FCC's Houston Field Office explaining specific actions taken to correct each violation and to preclude recurrence.

What kind of signal does he have? Is the audio broadcast quality?

What is the year of issue of these letters? FCC correspondence always includes a FULL date in the text? Did you edit out the years for some reason? Also, it does not appear these letters were issued for packet operations? It would be helpful if you post the years these letters were issued, because that would indicate if the commission is still interested in enforcement in this frequency range. I don't want to got through the effort of copying these guys if the FCC is no longer interested in enforcement in this freq. range.

Dave

Wish you had not edited the FULL date out of these letters.
A local ham whose been reading this thread just called me on two
meters and advised me these letters were from enforcement
actions in the 1990s. Is that correct Dave? In fact, he tells me
KC5WHN no longer even holds an amateur license. (verifiable
in qrz.com) What this confirms is what many of us have heard
at trade shows. The commission no longer has the pool of
technical experts it once had a decade ago and would be hard
pressed to copy and analyze a packet net well enough, if at all,
to assemble a case which would stand up to scrutiny for a
possible enforcement action. I am still copying packet on
27545 and will post later on some of the stuff I see. Again,
calm down you guys, I am NOT transmitting and have no
intention to. I realize these guys, if they are in U.S. jurisdiction,
are probably operating illegally.

Dave

For the same reason some people choose to confine their sexual attentions to 10 year olds or experiment with recreational drugs...Someone said, "No", therefore they're going to do it anyway.

Freebanding is illegal for a reason...that reason is that if we don't agree by convention to divvy the bands up and share them in a mutually resepctful way, what we will have is chaos and anarchy.

Freebanding is an expession of selfishness and disregard for the rights and needs of others. Freebanders are the idiots doing 50 in a school zone or passing on the blind side of the hill. They don't care who get's hurt or if they are deprived of their own ability to use a radio, as long as they (freebanders) can hook that skip.

And, I'll say it again, only in a manner maybe you'll be able to understand:

A trained and certified parachutist jumps off a skyscraper for the thrill of
it.
A trained and professional race car driver drives on a highway at high
speed.
A amateur radio operator operates within illegal spectrum.
A trained and certified SCUBA diver dives in illegal waters.

Why? For the THRILL of it.

Interesting copy. Been copying these guys until just after sunset,
when they faded out. They mentioned a qsy to a freq in the
6 mHz band for night operation. Now THAT is a real big
no no, as that, I believe, is in an aero band. Heard several ham
call signs. Not going to repeat them here, as they may very well
be bootleg call signs, being used without the knowledge of the legit
owner of the call. Wonder why the FCC is not on top of this?
Most likely because they no longer have the technical expertise to
process something like this. Just now hearing some stations fade
in on 6680 mHz I think, lots of qrn. Some calls heard: us7az
us7az1, usa4fla, us3md, and several legit ham calls. These guys
are making several references to the FCC in their conversation.
Weird stuff.

Dave

OK, I'd buy that (really!), but it just doesn't seem to hold much water. Isn't there more "thrill" in having literally dozens of bands to operate, from "almost DC" to "almost Daylight", rather than just a tiny sliver of poor spectrum around the vicinity 27-28Mhz?

Where's the "THRILL" in that? Quite honestly, I'd find it pretty boring. There's GOT to be more to the story, especially considering how easy these folks could get a ham license.

It's PROVEN on ARN's own web site: All donations are put to use for news
gathering expenses. Have you even read the text of their web site?

> >All he has to do is comply with the law and indicate in his organization's
> >solicitation that they also sponsor the scholarship with the donations. He

> Pasternak.
>
> >I'm not trying to make him stop offering the scholarship. Where did you
> >mistakenly pick up that idea? I never said that.
>
> Sure you are.

What exactly makes you think that?

What I have said is that his solicitation for donations is not in compliance with the law, and if he fails to change it, I will complain to have his charity shut down - and that means the news gathering activity too. I am in no way biased toward the scholarship activity.

> You harass him, you try to humiliate him, and even taunt him to "debate"

Not quite: The question should be, "Is Steve really that stupid?"

By challenging me, all he is asking me to do is to actually attempt to get ARN shut down - a result that appears completely contrary to his stated position. Push hard enough and I may just do exactly that. What would simple-Steve have to say WHEN I succeed?

> ADDED in the gimmick, you get virtually no better range, and the extra
> 8 channels aren't worth the $80.

Not true...as usual.

Well...Let me ammend that to say they maybe of no use to YOU,
Stewart.

The "no better range" assertion is ludicrous. FRS radios are
limited to 1/2 watt and a fixed internal antenna. A GMRS radio can
use 50 times the power and external antennas that can provide even
greater ERP. Furthermore, GMRS licensees have access to repeaters,
albeit mostly on a pay-for-use basis.

FRS and MURS are the gimmicks...Smoke-and-mirror advertising gets
people to buy those radios, and when the disappointing performance
sends them looking for something else, wa-la..we can sell them yet
another radio!

So...How's that nationwide MURS packet net coming?

The REAL question is "When is Stussy going to realize what a fool
he's made out of himself, and when will he stop doing it?"

> By challenging me, all he is asking me to do is to actually attempt to get ARN
> shut down - a result that appears completely contrary to his stated position.

> to say WHEN I succeed?

Oh, it's NOT a "challenge", Dieter.

A "challenge" would assume that >>I<< assume you'd take it on and
do something about it.

I have no reason to believe you will. You've been barking at
these shadows for 2 years now, and you're no closer to doing anything
about it than you were then.

"Push hard enough and I may just do exactly that."

Yeah. Right.

And "What would simple-Steve have to say WHEN I succeed?"...?!?!
I already answered that question months ago when you asked that same
question before you started in on Lenniesque diminutives.

You're a whiner and a braggart, Mr Stussy, and I have every expectation that you will not "file your charges". And even if you do, I have every reason to believe that you will fail. And when you do, I will laugh like a hyiena for weeks!

Nope. For those kinds of folks, no. I told the story of the CB Family-talk we used to have every night. And, I mentioned that many of us had got our "ticket." You never asked why we didn't continue this tradition once we got our ham license. The reason? Because ham radio wasn't the venue for such a thing--believe it or not. We had more interruptions, more "jammers," more nitwits on ham radio than we'd ever had to deal with on CB. And, I am not being flippant, dishonest, or intentionally disrespectful to ham radio. Ham radio has its definite advantages, successes, etc. But, it isn't the paradise you believe it to be FOR YOU, to everyone. That's the difference, Hans. Whether you get it or not.

>
> Where's the "THRILL" in that? Quite honestly, I'd find it pretty boring.

OK, so you'd find it boring. I'd find it more bother than it's worth--and I'd certainly not risk my license over it. But, I know hams here locally whom I met on illegal frequencies in the 27 Mhz arena who were still there the last time I checked (now more than a few years ago...but I'd hazard a guess that they are still there). For that particular thing, I am sure it is because it began as a "illegal sneak" to them, but now it's more that it's "downhome" to them.

For you, the thrill is those things you mention. But, for some, those very things you mention are ho-hum and who cares. It used to be a lot more fun doing a lot of things I wasn't supposed to be doing as a teen-ager, than any of those same activities I've repeated as an adult. I think it's the same basics at work here.

Nope...and I could care less.

Ya know why?

Because ARN's sponsorship of their scholarships is such widely
published knowledge that anyone claiming "I didn't know my money was
being used for scholarships" will look like an even bigger idiot than
you seem to be, Dieter.

There's not a SINGLE published Amateur Radio journal or forum
that doesn't identify the source and intent of those scholarships.

> > >All he has to do is comply with the law and indicate in his organization's

>
> The LAW says that he must. He isn't.

Now that's NOT what I asked, is it, Dieter. Later in this same
post you call me an imbecile, yet you can't even answer a direct
question with a direct answer.

WHO is complaining otherwise?

> > The one and ONLY person who has a personal axe to grind with Bill

>
> What exactly makes you think that?

See, you PROVE you're the imbecile, Dieter...You rant and rave
about the funding of these scholarships, the ONLY possible outcome
being that either ARN withdraws them or a court order stops them.

In either case, KIDS LOSE!

That's why I am going to go back on one of my standing "policies"
about profanity, and call you a SELFISH PRICK.

In THIS day and age when education is at one hand such a premium,
yet so many other people pay it lip service when it comes to funding
it, it takes a really NARROW MINDED jerk to persue a course of action
whose ONLY ultimate outcome could be the loss of some of that funding.

You, Dieter Stussy, ARE that narrow minded jerk.

> What I have said is that his solicitation for donations is not in compliance
> with the law, and if he fails to change it, I will complain to have his charity

Sorry, Stussy...You cannot be "against" the left hand when it's directly connected to the right

> > You harass him, you try to humiliate him, and even taunt him to "debate"

> Coward? I'm not afraid of an imbecile such as you.

Where did anyone say you were scared of me?

What you NEED to be "afraid" of is the backlash that will land on your front door when your selfish, egotistical, single-minded crusade deprives deserving kids from yet another avenue of funding their education.

The Amateur Radio Newsline scholarships are well-known and sought after by many kids. The only "bad" thing about them is that there's not enough money for EVERY kid who applies.

You screw this up for them and I PROMISE bumper stickers of Dieter Stussy's face and callsign, superimposed on the south end of a north bound jackass, will become a favorite "gag" item at hamfests all over America, along with the slogan "I Traded Your Scholarship For My Ego".

Is that clear enough?

Actually that's merely a vulgarity not a profanity. Even though the
definitions are closely related, one can be vulgar without being profane.

Don't worry Kim, I would never put you in a position of having to chose the correct path or to make an assumption of trust. You are incapable of either.

And since you are a military brat, I am sure you are familiar with this term, as applied to you.

Dipshit !

Have a nice day.

I stand by my statements Kim. I have never heard a legal CB conversation,
with the exception I indicated.

What you said, changes nothing.

Hans,

Perhaps Kim's commentary indicates the attitude of a large percentage of 'recent' ham licensees. This could explain the 'problems' us older licensees are having with them.

And for Kim, since she obviously finds illegal operation thrilling, and by that fact seems to be supportive of it, that explains why she, me and you are not on the same page.

(Sung to the tune of
Santa Claus is Coming...)

Glennda better watch out,
he better not pout,
he better not cry -
Im tellin you why!

Fedral Marshalls cum
in his mouth!

They know that hes a fat-ass,
Theyve heard he jams boy scouts,
Theyve seen that hes a tax cheat,
and they know he has no clout!

So, he better sign off,
he better shut down,
(or just fire up and
admit hes a clown)

Glennda dresses in his
moms clothes!

We think he is a homo.
Were sure he is a fag.
We know that Chrissy No-cock
holds down sheep so he can shag -
them!

So, he better not jam,
better not in-ter-fere.
(Even Riley knows hes a queer)

Fedral Marshalls cum in his mouth!

NAL Time Glennda

Merrrrrrrry Christmas!

I don't believe you'll do anything, even if pushed. All of your blather
is confined to this newsgroup. Succeed and then you may ask what Steve
thinks or what I think of your effort. Fact is, you've got a long
history of whines, gripes and accusations toward Bill Pasternak all
neatly archived on Google. There is no evidence that you've done
anything about Pasternak.

oh really? and where is this mythical STA that the FCC issued. I have found NOTHING in any of their databases to even point to the use of that frequency by anyone other than "government numbers stations".

At best, your assertion is an extreme misrepresentation of the facts. at worst, its an outright lie. Either way, the STA you speak of does not "officially" exist.

BTW, do you realize that by posting here the above mentioned data, you have admitted to violating federal regulations (and a few laws as well). Since it is now a matter of public record, how do you choose to defend yourself?

Spent all my childhood life with my dad in the Navy, Dan. Never lived on
base, that I know of, lived mostly in Newfoundland and Norfolk.

Oh, and I never claimed to be dignified. But, then again, I guess you never
have, either. And, if all you got is my callsign to argue
about...well...never mind.

He seems to be off the air today!

14.275 has not seen his crappy RF all morning long.

Does this mean he's finally been "relieved of
his duties" by the FCC ? (..or via the local nuthouse too?)

We can hope so!

Anyone up in ME or the Northeast got any news on this?

If he was finally shut down it's great news!

Just think of it, right now as you r read this, ole RG 'Brother' Stair
the loony SW religious broadcaster is having his court trial
in SC for numerous charges of underage buggery, fraud, theft
and unlawful burying of a dead man on his church property....

Now if K1MAN is gone, and RGS is found guilty later
this week, or the next, it will be TRUE REASONS to
celebrate and bust the hymen on a magnum-sized
bottle of Champagne!

(note: The boy-broadcaster has been known in the past
to shut down his operations for a day or two then come
back on the air all over again, so he may have gone back
into his manhole and snapped down the round cover for
awhile to ostensibly play silly games with the listeners....)

Don't get your hopes up...he has a terrible record of reliable operation and something probably just crapped out again....maybe the Shady O'Rack timers bit the dust, or the el cheapo cassette deck crapped out, or the rig fell through the floor of that decrepid condemned structure he calls a shack....he probably doesn't know it's off the air yet....seeing as how there is never a control op up there...

Just a few thoughts....any other guesses?

There's a pirate sporadically operating on 3965 kHz.
Claims to be located in NY state. Could be. I am in Boston
area, and he has a qsa5 sig here, whereas people to the s.e.
and west report much lower sig strengths. Format is lots of
anti fcc stuff and satire, some rap music too.

>There's GOT to be more to the story, especially considering how easy these
>folks could get a ham license.

That question has always intrigued me, too. Here are some possibilities:

- No test at all. No learning stuff you think is irrelevant - code, theory, rules, whatever.

- No having to tell "the government" your real name, address, SSN/TIN, etc.

- No limitations to bands, modes, power, content, etc. Even though the activity is concetrated around 27 MHz, there's no hard band edges or other limitations.

- A lot of those folks came from cb, where the prevailing culture has long been to pretty much ignore regulations you don't like. Going "legit" would mean giving all that up, because as AA2QA notes, *any* illegal operation puts your FCC license at risk.

A ham or GROL holder caught "freebanding" is arguably in a worse spot than an unlicensed person from an enforcement point of view. The unlicensed person can argue that they didn't know it was illegal, and may get off relatively lightly on a first offense. But an FCC licensed op is expected to know more!

Are you confusing a poor operating ham as a pirate shortwave
broadcaster? I've been listening to 3965 kHz for a couple hours, now,
and have only heard some dimwits back east (NA) jabbering about
trivial matters. It's not too hard to find lunatics on the ham bands
transmitting all kinds of illegal stuff. Try to tune into 3840 kHz
sometimes late in your evenings/night and listen for the wacko named
Steve Wingate, KG6TXH. He does everything you've mentioned almost on a
nightly basis running 1500 watts into a fairly good size antenna. He's
the latest edition of idiot-ham to appear on that frequency. I've
received many emails regarding FCC actions that are supposedly in the
works against him by R.Hollingsworth.

I SAW THIS WHINNING POST ON ONE OF THE HAMMIE BOARDS.

THEY'RE FINALLY FINDING OUT WHAT EVERYBODY KNEW. HAMS ARE USELESS!!AND NOBODY THINKS THEY'RE IMPORTANT OTHER THAN THE OTHER DEAD LOADS ON THEY'RE LOCAL REPEATERS!!

"Yes, yes, I know. You've heard this before. It's been pronounced when FM was introduced, screamed from the mountaintops when no-code came to be, and continues even today with BPL. However, I have seen some disturbing trends lately, and I think that they point towards the slow and painful death of the hobby we hold dear. Please, indulge me for a moment as I explain.

Whenever there is any threat to Amateur Radio, be it potential band reallocation, Part 15 intrusion, or any other issue that threatens to upset the status quo, we hams immediately raise the one sacred, (usually) FCC-scaring, blood boiling rallying cry that we have - WE PROVIDE EMERGENCY COMMUNICATIONS. We never justify ourselves anymore as advancers of the radio art (we'd be hard pressed to do so these days), so the only value we can provide to justify our continued occupancy of billions of dollars of spectrum is merely emergency communications. I believe that very soon, certainly in my lifetime, we will be all but out of that game. Allow me to explain.

I have been a resident of Tampa, FL for the past few years. 2004 will certainly be remembered around here for a long time - and should have been a shining example of emergency communications saving the day time and time again. You didn't hear that this time. Wonder why? I spent time in some of the hardest hit areas here in Florida, and what I saw from an emergency communications perspective scared me silly. Before we tackle that, however, let's go back in time a little:

1991: A newly licensed ham living in Long Island, NY; I am called up to help provide communications in support of Hurricane Bob, which would up dealing a glancing blow to the eastern end of the Island. We were activated by the local emergency management office, and assigned to various government and first responding agencies to allow for intercommunication if needed. Fortunately, we were not tasked in my immediate area.

1996: TWA Flight 800 crashes off the coast of Long Island. Hams assist the Red Cross in providing communications for mass care operations (primarily). This, I will later realize, is the first operation I have been involved with in which hams were merely augmenting a cellular system that was overloaded for an agency that has radio communication

equipment of its own but rarely uses due to training and equipment issues.

2001: 9/11. I am forced by my employer to sit this one out in Florida (where I have arrived earlier in the year), but manage to scrape together a web-based database to manage the load of volunteers. I quickly realize that this, again, is a Red Cross/Salvation Army support operation. I never heard of any assistance to FDNY, NYPD, Port Authority Police, the EMO, or anything else.

2004: Four hurricanes in almost as many weeks. Hardly anywhere in Florida has not been affected by these storms. People are without food, shelter, electricity, water, telephones, cell phones (in many cases). Essentially, much of Florida has dialed the clock back 100 years or so. Tensions are high. The EMOs consider how to prevent civil disturbances and looting of incoming food and supplies. Fire Departments are going door to door looking for survivors. Driving through the main street of a town at night is hazardous at more than 5mph due to the amount of overhead and downed debris and electrical wiring (which probably is dead, but who knows?).

So, you might ask, how did Amateur Radio respond?

I'm not sure we did.

I responded to 3 seriously hit areas: Wauchula (in Central Florida), Punta Gorda (in South Florida) and Pensacola (in the Florida Panhandle).

In Wauchula, we delivered a portable repeater system so that the responding agencies could communicate. That sounds like a fine use of ham radio - except it was a Forestry repeater, on their frequencies. Sure, we hams brought it and deployed it, but anyone familiar with the setup could have. The Sheriff's Department lost a huge tower (and thus their repeater) in the storm, leaving them with no communications save simplex, which didn't even come close to covering their operating area. Therefore, deputies in the furthest reaching areas had no communications. We were able to move their repeater to another location that had a working antenna and saved the day. But once again, we did not operate OUR radios, save for local simplex communications to get this all accomplished.

As the EMO had no tasking for us (by now the cellular providers had their mobile cell sites around), we left.

Punta Gorda. Ground Zero for Hurricane Charley. I arrive there a week after Charley hits to help relieve the operators from the local area. I get there to find no tasking other than Red Cross communications, and a Section Manager so starved for something to do - ANYTHING to do - that he cooks up a plan to have hams drive around the community soliciting health and welfare traffic. Remember, folks, this is a full WEEK after the Hurricane. If you haven't gotten a message out to your loved ones in a week, you probably don't want to. Again, there's little to do - the Red Cross is using Nextels - which are working.

Pensacola. In the wake of Hurricane Ivan, the call goes out - hams are needed - BADLY. I kiss the YL goodbye, load my Jeep, and start out on the 8 hour drive. Upon arrival, I am sent to the local Red Cross (here we go again) headquarters to relieve operators. There, I meet two hams who inform me that they have passed 3 messages in the past 24 hours. Three. One ham has extensive damage to his home and, quite frankly, this is a better place for him to sleep at the moment. The other ham wonders what we are doing there. He departs the next morning.

In the morning, I am informed that Red Cross operations are moving from the Chapter Headquarters to a larger facility in the donated basement of a commercial company. I am asked to establish communications from there to the EOC. Getting there, I am staggered to find that I am expected to provide communications to a building that has working telephones, internet access, email, a slew of Nextels that are being handed out, and, to add insult to injury, 2 Red Cross comm vans with every type of radio known to man (including ham), satellite links into the National Red Cross Network, and WiFi.

I tell the hams running the show at the EOC what the story is - I'm providing communications for a building that has more communications than I think I have ever seen in one location before. They respond by sending a total of 4 more hams to assist. I speak to the local EC and tell him that if he doesn't want a boatload of really perturbed hams, he'd better find some taskings for us to justify putting out the ARES equivalent of an All Points Bulleting screaming for ham help. He promises that we will have something to do in the morning.

I spend a part of the night helping the Red Cross folks set up WiFi so that they don't have to run cabling to each workstation for network access. I begin to wonder if I could have left my license at home.

The next morning, we do indeed have a tasking. The Red Cross is making a push into the hardest hit local area on the beach near the Gulf of Mexico - as close to the landfall point as we're gonna get. (It literally is described almost like an offensive against rebels in Iraq). Given the amount of sand that was blown over roadways, I am chosen along with another of my overnight compatriots for the task since we both have 4-wheel drive. We depart, with instructions to meet and team up with two other hams at the parking lot of a local supermarket just outside the devastated area. There, we are to await the Red Cross team that will push Mass Care into this area.

Upon our arrival, we meet the two hams immediately, and they are NOT happy. They've been waiting there for this Red Cross team for HOURS, and each time they ask where the Red Cross is, they are told "any time now". Seeing us, they quickly decide that we are their relief. They've had it, and head home. Net Control doesn't sound too surprised to hear that they have abandoned ship.

My new partner and I wait for three hours. Yes, that's right, THREE HOURS. No sign of the Red Cross. During our wait, we take some time to take a look at the shopping center in this hard-hit, hurricane ravaged

area. The supermarket is open. OPEN? We look inside. They have milk. MILK? I can't buy milk in TAMPA, and we never came close to being hit by Ivan! Further inspection here reveals that they have ice, bread, bottled water, and everything that people in a hurricane-ravaged area should be waiting in long lines and mugging their fellow citizens for. All the while, my cell phone has a great signal, and I am able to make and get calls at will. Now, really starting to question our mission here, we begin asking Net Control the tough questions: WHERE IS THIS TEAM, AND WHAT IS OUR MISSION? A great deal of scurrying is heard over in the EOC, and eventually we are told that they don't know where the Red Cross team is, but we should await them.

Sorry. We've been here for three and a half hours, and the team before us was waiting almost as long. I snap. I drive back, collect my belonging, and without so much as a word, I begin the drive home, arriving at 4am, the stomach acid churning in my stomach having proved quite adequate to keep me awake for the drive. The other ham (and a few others) leave the area as well, ranging from disillusioned to plain old mad.

Sitting back afterwards, I began to realize a few trends that had been slowly emerging:

1. Ham Radio (well, ARES anyway) has largely become the free communications auxiliary to the Red Cross.

Worse, they already have enough communications capability to more than cover themselves. Their problem? A lack of trained communicators. Suddenly, I grasp why we always seem to be assigned to the Red Cross. I try to remember the last time I was assigned to anyone other than the Red Cross during an emergency. I have to go back almost ten years.

2. The Red Cross doesn't need us.

Even while assigned to the Red Cross, the only task consistently put to hams is to relay shelter census counts. I almost couldn't believe my ears as I heard hams relaying shelter census counts to an EOC when both had fully working landline phones. Why are we used in this scenario? Because they don't have to use Red Cross personnel to do it. For their critical comms, they use Nextel. I can't remember the last time I saw the Red Cross even use their OWN radios, which they have in abundance.

3. Cell phones, mutual aid repeaters, Blackberries are replacing Ham Radio as the inter-agency communications glue.

None of the Emergency Management Offices I worked with had any need for communications outside of these. Cell phone providers rush in mobile cell sites (called "COWs" - Cellular On Wheels - a cell site on a trailer) when an emergency hits - and registered Emergency Management personnel get higher priority on the cell network - so overloaded cell sites are becoming a thing of the past for our served agencies. Blackberries run on the cellular networks and are low

bandwidth devices. Even in areas with no electricity, the Blackberry owners were tapping away like mad.

Now, you may say that this isn't the case in your area. You might even be right. However, I think we have seen the end of the era in which Amateur Radio saves the day as a matter of course in this country. In fact, the only example I've seen lately of Ham Radio coming through where all else fails is in the Hurricane Nets to the islands like Cuba, Grenada, and Haiti. In other words, those outside the US.

I see this as in inevitable slide down a slope towards more and more communications capability in the hands of the masses. Look at the revolution in smart cellphones - I carry a Treo 600 - a device from which I can surf the web, get and send email, and make and get phone calls - all in one little device. It wasn't all that long ago (fifteen years, perhaps?) that a cell phone was considered small if it fit in a briefcase. Where will we be in fifteen more years? Will we be able to still claim that we provide a critical, unique, robust communications capability? I think that once so many forms of communications saturate the general public that they can't all possibly go down during a disaster that we will have lost that argument. Remember when CW was the mode that got you through when all else failed? Now, make that argument to anyone but a CW buff and you'll be laughed at. I remember being able to show my HT to a teenager and see the look of amazement when I made a contact over a repeater to the next County. Now, that same teenager will ask if that big cell phone I'm carrying can play cool ringtones. I rapidly see the day approaching in which we will be relegated to the museums like the dinosaurs that we will have become - a quaint memory of what once was. A nostalgic trip down communications lane. We will, as a hobby, become the macrocosm of CW - outdated, outmoded, and universally laughed at as we try to claim that we are needed somehow.

And then the spectrum vultures will come. "

Slim Jim, you sound like you have a chip on your shoulder

1.Ham radio just is a hobby.
2.Like the majority of radio hams I'm not interested in RAYNET or and other organisation like it, to me its just a hobby.
3.I don't think I'm more important than anyone. I was into radio for 15 years before I took the test.
4.Repeater activity is not all amateur radio. Most hams I know wont use them.

If you don't like radio hams then why do you lurk in the amateur radio news groups? Maybe you were one of the one's who failed the test or were just too thick to learn it.

BTW I find better technical discussion in UK.rec.radio.cb than I do in most amateur radio ng's. I think CB is a good idea, it just fell apart in the UK.

I think you hit the nail on the head here, the little twit is probably
too dumb to pass the test for a ham license so the best he can do is
attempt to discredit something he isn't smart enough to be a part of.

Notice how he uses "they're" instead of "their".

Maybe Slim Jim was quoting the erroneous "they're" back from another post,
not writing it himself. Also, I think I detected a subtle hint that he was,
in fact, licensed, as in, "1991: A newly licensed ham living in Long Island,
NY." Furthermore, I think he does like hams but he's lamenting the secondary
role being forced on US as hams. Commercial communications are getting
really very good and maybe we're not as important as we once were.

I don't know Slim Jim. I hope he doesn't mind having me jump to his
defense. Judging by his writing, I'm sure he can defend his position if he
chooses to do so.

No, I still think he is a semi literate knob head with the Capslock virus.
Your playing right into his hand by adding the comment "maybe we're not as
important as we once were" We are not important! Its a hobby.

These are the numbers of amateur licenses held by individuals on the
stated dates:

As of May 14, 2000:

Novice - 49,329
Technician - 205,394
Technician Plus - 128,860
General - 112,677
Advanced - 99,782
Extra - 78,750

Total Tech/TechPlus - 334,254

Total all classes - 674,792

As of November 30, 2004:

Novice - 29,935 (decrease of 19,394)
Technician - 265,198 (increase of 59,804)
Technician Plus - 54,881 (decrease of 73,979)
General - 138,471 (increase of 25,794)
Advanced - 78,163 (decrease of 21,619)
Extra - 105,991 (increase of 27,253)

Total Tech/TechPlus - 320,079 (decrease of 14,175)

Total all classes - 672,639 (decrease of 2153)

Yep, you are quite correct there Twist. Here is one of my favorite
invitations from N8WWM, for me to come to Toledo. Check out what
he claims he will do to me, when in fact he's a fucking coward after
I arrive and knock on his section eight slum door.

http://tinyurl.com/5c5ck

Oh and as it turns out, I took his fugly picture. I didn't think
anything this fugly could be found without digging the ground
up.

http://img37.exs.cx/my.php?loc=img37&image=a7-dogieupclosefugly.jpg

Yes, another keyboard tough guy exposed as the coward he truly is.

That's not a ham radio policy issue at this point, it's about
reviewing and reworking the gummint's inhouse radio comms inside their
existing slices of the RF spectrum via the NTIA and DoD. When the prez
orders a a similar top-to-bottom review of the slices of the RF
spectrum regulated by the FCC we could have some hot potato ham radio
policy issues on our hands.

To spell it out for your small brain.
What I said was that he came out of the house and it looks like you were
the coward for standing in the street.
I never said it wasn't Public domain ASSWIPE.
Why do you idiots have to call everybody that doesn't agree with you a name?

Take your bait someplace else, I ain't biting it. He wouldn't come out
of the house, that's the whole point. I was lucky to get that pic, since
he ducked behind the fucking door every time I put the camera up to
my eye. Now rug along chump, I'm done with ya.

If those numbers are truly legit, then they are transmitted as a hoax .
Those numbers could not be a true sequence. No interest of any nation would
use it, it follows no protocol. So I would not fret over this thread.

Not sure what you are trying to say. The pirate on 3965 kHz is xmiting
these cryptograms, and many people have had success in breaking
them out, partially and wholly. Interesting stuff, and one cannot
help but wonder why the FCC is showing no interest?

Dr Ham

Anybody have any luck with this one? A partial break looks
like his programming sked for the next few days.

Dr Ham

K1MAN does it he's a jammer and a lid.

W1AW does it it's a service to the amateur radio community.

Hams are hypocrites, just little whiners who got their asses kick at school everyday now they think they're something.

Hams like to whine & cry.
To wit:

-A.M. guys whined & cried about how sideband was the ruin of ham radio.
-Incentive licensing ruined ham radio.
-No code licenses will ruin ham radio.
-ARRL is ruining ham radio.
-KV4FZ will ruin ham radio.
-K1MAN will ruin ham radio.
-(this space reserved for future whining & crying.)

I don't know why you culturally retarded individuals would want to whine and complain about Jamming on the air... Just yesterday I heard a really great jam session... They had Dweezil Zappa in there, with Patrick O'Hearn on drums.

If you don't like it, TURN THE EFFING DIAL !

Idiots.

Charles, N5PVL ;-)

The problem with many (not all) ham radio operators is that they think they
own the frequencies assigned to them and they have a "right" to use them.

Neither is true!

This whole thread so far seems like a troll, but if it is it's not really working, because you're right.

There is a large contingent of hams who don't want anything to change, ever. For a technology based hobby that's a seriously weird POV, as the whole basis of technology is change itself. Change is as inevitable as death and taxes.

FWIW, I have no problem with K1MAN, as I don't see much difference between his bulletins and those of W1AW. The only differences are of the same order as those between, say, ABC and CBS. The remedy is also the same, i.e. if you don't like one or the other, change the channel/frequency.

The international requirement for a code test had a beginning and an end. It began in 1927, and ended in 2003. It wasn't there at the beginning of the hobby, and it's not there now. It's a pity that the FCC will take so long to do anything about it, but they will. Hopefully then this issue will go the same way as spark and AM.

The "facts" are that only a very few idiots believe that. However an even bigger percentage of persons keep trying to perpetuate the idea.

And while no Amateur "owns" a frequency, we DO have the right to use those frequencies assigned to us.

So sayeth the FCC.

"Large contingent", Alun?

Where are they?

Where is their voice?

I've been a US Amateur since 1972 and while there's always someone who
likes things "just the way they are", that's true in EVERY aspect of life.

Why does anyone think that Radio Amateurs should be any different?

>FWIW, I have no problem with K1MAN, as I don't see much difference between

The problem between W1AM and Baxter is that W1AM actually represents
someone. And Baxter only represents Baxter. While the ARRL editorializes in
QST, it does NOT editorialize on the air. Therein lies the biggest difference.

Also, Baxter is a felonious lawbreaker. He's a criminal and a punk. No
more...No less.

While the legal "requirement" for Morse Code proficiency has gone away,
there still exists a valid reason to keep Morse Code as a basic communication
skill around. The day of the "universal translator" ala-Star Trek has yet to
arrive, and Morse Code can still help bridge that gap.

Some amateurs may not realize what Steve is talking about... With morse code, you can get through a basic QSO with amateurs who speak a digfferent language better than one might normally expect!

Quoting EI7IS's blog---: http://www.hamblog.com/blog_ei7is.php

---
One argument that was not very well plugged by the "Keep the CW Requirement" lobby and is still a good reason for learning The Code (compulsory or not) is the fact that Morse is the "Lingua Franca of Radio". Apparently in use since the Middle Ages, Lingua Franca was a trade language used by various language communities around the Mediterranean, to communicate with others whose language they did not speak. It was a simple language which allowed traders of different cultures/languages to communicate their prices and quantities to each other and served it's purpose up until the 19th century.

What many don't realise about CW is that it is fairly much "language independent" and an English speaking radio amateur can communicate with a Japanese operator without ever being aware of any language barriers! This is because CW uses prosigns and abbreviations (such as the Q-Code) which mean the same thing world wide regardless of language. Now, what other mode allows you to do that? (Ok, SSTV gives it a good stab, but apart from that CW is pretty unique).

Hallo,

I have visited InfoRelation.com and I would like to thank you for drawing
my attention to this service ;-). The idea of connecting demand
and supply for info, knowledge etc is great! Thanks to this I was able
to find an expert in the field of my interest and hobby.
As regards your advertisement I think that perhaps you offer too much
money to the members of the projetc team ;-).

Best regards,
Donald Martin

Steve,

I'm a great fan of the use of Morse code (small c), but the above statement is pure bullshit. Morse is just a way of encoding alpha-numeric characters, not a bridge between languages.

Before you trot out the old rant about Q-signals and abbreviations, I'll remind you that those Q-signals and abbreviations have the same meaning whether spoken, sent as ASCII or Baudot signals, or waved over semaphore flags.

Again with the profanities, Hans?

Are you not man nor mature enough to make your point without them?

Please prove to me where the "BS" was...???

Morse Code (I'll capitalize it if I so care to do so as long as YOU feel compelled to use profanity) >>IS<< a way to bridge languages, Hans.

No accent. No prejudice based upon "impairments". The simplest means of getting a message from point A to point B with a modicum of understanding.

And Yes, we all know those "Q-signals" have the same meaning...That's the whole point, but then again you KNEW that before you launched into yet another opportunity to be king of the hill.

In actuality, you just wound up being queen of the anthill.

A profane one at that.

In reality, the "legal" requirement for morsemanship to use all amateur privileges below 30 MHz has NOT "gone away."

Also, there is NO requirement or even suggestion that U.S. radio amateurs MUST "speak" to those whose primary language is not English.

The ONLY reason for adopting a "simple" (technologically speaking) method of using radio waves to communicate was that turning a radio transmitter on or off was about the ONLY way the primitive, early radio could be used.

[Miccolis is even now preparing a scathing rebuke talking about his old buddy, Reggie Fessenden, doing AM with a carbon mike in the antenna lead way back in 1900 (supposedly) and for sure in 1906 (many witnesses)...not exactly a wide-spread adoption of an AM method then, now or in-between]

Tsk. Most of that is intellectual-academic bullshit in actual practice, according to much more detailed history from about 500 AD an onward (give or take a millennium).

First of all, amateur radio under U.S. regulations is NOT for trade purposes, commerce, or anything involving money (that's why it is called

AMATEUR radio, done for non-pecuniary reasons, or, more simply, as
a HOBBY).

What was actually USED as a so-called "common language for money
exchange" (lingua franca or language for franking) was a highly-variable
polyglot depending on the region. There was NO one language, but many,
since there was relatively little in the way of lexicons or other aids for
study. Those in "international" commerce and trade had to learn as
much and as many different necessary languages and dialects as they
were able to do. For business purposes, the needs of language were
relatively simple since business transactions were largely without all of
the modern regulations, taxation, tariffs, etc.

>What many don't realise about CW is that it is fairly much "language
>independent" and an English speaking radio amateur can communicate with a
>Japanese operator without ever being aware of any language barriers!

As written by someone whose native language is English, that's an
extremely biased statement.

First, there's NO "need" for any U.S. amateur to communicate with
Japanese amateurs, nor any other amateurs whose languages are not
English...not any more than a Japanese amateur being required to
communicate with a Chinese, Korean, or Russian amateur. [a large
population fraction of the world, none of whom have English as the
native language...and morse code is based on the English alphabet]

"Q Codes" and other jargonspeak prosigns were developed NOT as any
"lingua franca" but because manual morse was SLOW compared to
speech. That was a convenience, not a necessity. A "QSY" can be
as easy to understand in any form of communication from morse to
TTY to speech to the printed word. It is JARGON, not some magic
phrase. If commonly used by many, then it becomes understandable
throughout the radio communications world. [amateurs didn't start that
sort of jargon, but many erroneously think they did]

>This is
>because CW uses prosigns and abbreviations (such as the Q-Code) which mean
>the same thing world wide regardless of language. Now, what other mode
>allows you to do that? (Ok, SSTV gives it a good stab, but apart from that
>CW is pretty unique).

No cigar. Invalid reasoning. All those "prosigns" and Q Codes do is
fit standard phrasing into a shorter time frame, no more and no less than
the JARGON of any common activity.

Among the members of the electrical unions at work in the film and TV
industry, "Kill the broad!" means to turn off the broad (wide-beam) lighting
on a set. "Go to black" in TV production means to shut down video-audio
as in after a "Crawl" is done (the roll-through of credits for the
production).
All those terms are perfectly understandable - within their lines of work -
and came to be standardized with wide use as in all human jargon. It

isn't "unique" or magic or any other self-congratulatory wonderfulness.

What all of the PCTA bafflegab boils down to is that the morsemen managed to learn a particular skill of early radio (a necessary skill in old, primitive
radio), are highly proud of their accomplishment, and insist that others do the same extraordinary thing they did...to prove these newcomers are "as good in radio" as they.

That's exactly how they got me to buy these damn handsets. It allows
2 mile range on FRS channels and 6 miles range on GMRS.

I guess I'm most confused about how the FCC intends on policing these
airwaves. Do they record everychannel and maintain a massive
database? Or must I be caught using it with the handset designated on
the GMRS network.

Honestly, I the gov't were to supply me with a manuel, or some form of
education on getting more (proper) use out of the handset, I would not
complain about getting the license.

Again, I really want to thank everyone for their responses. Much
appreciated.

In one sense we hams all "own the ham band frequencies", ie,
the FCC allocated them for us to use. But no one ham has
exclusive right to any one frequency. You first check that
the frequency is clear, then use it, then when you're done
give it up for others to use.

As an aside, that no pecuniary interest rule is to protect our
ham bands from being invaded by business traffic. Else the
business people would crowd us hams out (imagine getting sued
for QRM because you inadvertently QRMed a business QSO).

Our Q signals are not specifically English only acronyms,
but a code of sorts for some specific concept. "QRM" means
"man made interference" in English, but in some foreign
language in Asia it means "yik blwu puq". Which has no similarity
in sound of the spoken word from English to some Asian
language. But the idea is delivered. In Iraq, I doubt that
the bad guys call rocket propelled grenades "RPGs", but
"blah uyew boom" or whatever in Iraqian. To them "RPG"
is an acronym that doesn't match their words. Q signals
don't match any language's words, thus are language
independent.
>
>
>>This is
>>because CW uses prosigns and abbreviations (such as the Q-Code) which mean

People say them in phone. Still shorter than saying
all those words. And if the contact is not fluent in
English, he still gets the idea.

Pretty much any mode. The "Q-code" is the same in CW, spoken, ASCII, Baudot, or
even waved with semaphore flags.

See Julio Gonzalez at the Raleigh Flea Market. He has a large selection
of marine radios, family radios, ham radios, linear amps, business band
radios, aero radios, etc. and none of them require a license. He even
posts a sign saying no license required. For those who are still concerned
about a license, Julio will sell you an official Mexican radio license.

The issue can't go the same as spark and AM as these two activities went different directions. Spark is simply not allowed due to the fact that it chews up so much spectrum. On the other hand AM is still allowed and has developed into a niche subhobby of ham radio. While the code test may go away, I doubt if code will be forbidden. And due to its usefulness, it's unlikely to descend to the small niche that AM has.

No it is merely a vulgarity not a profanity. Unfortunately people confuse
the difference between the two. They are only approximately synonymous not
exactly synonymous.

Have you not been paying attention, Robert?

He's threatened bodily harm on law enforcement, FCC agents and Amateurs.

He's misrepresented himself with bogus "warrants".

He's disobeyed previous orders of the FCC.

More?

Also, please cite the author of item you are asking questions. It's considered a basic courtesy.

I dare you to say it over your Amateur Radio station knowing that the FCC
is monitoring, Dee. I consider it profane, approximately or otherwise, and so
does Uncle.

Please use your assigned callsign, and make sure you remind all listeners
that it's "merely" vulgar, and not "profane". I am sure they will be impressed
as they write out the citation.

First, this newsgroup isn't Amateur Radio and FCC doesn't give a rats ass what
we write here.

Second, even though "profane" or even "vulgar" language is in bad taste on
Amateur Radio, it is not illegal so no citation has been (nor would be) issued
for "profane" or "vulgar".

Obscenity would get you a citation, but bullshit is not on the famous "7 words"
list.

Sunuvagun!

We did encounter one looney a few years ago who said a certain repeater output was his frequency. It had been given to him by somebody he named (a name that none of us had ever heard). He stepped on our QSOs, using his own, real callsign, for a few hours and then no more. Padded cell time, maybe.

Hans has a point, there. - But like most folks, I don't skate around the edges of the law while on the air; preferring to have a bit of cushion there. A little extra civility while on the air is a very good policy in my opinion, law or no law.

I guess you're just too busy looking for an opportunity to be the bully to
ead what was wrote.

Go back and re-read what was written, Hans. The stop being an idiot...IF
you can.

>Second, even though "profane" or even "vulgar" language is in bad taste on
>Amateur Radio, it is not illegal so no citation has been (nor would be)
>issued
>for "profane" or "vulgar".

Sure it does.

>Obscenity would get you a citation, but bullshit is not on the famous "7
>words"
>list.

Doesn't matter what list it may or may not be on, Hans. Lesser
profanites have earned the FCC's ire. Mere description of the sex act, sans

graphic language has earned citations.

>Sunuvagun!

Sunuvagun yourself, Hans. Now...Get out of the bully mode, try and understand that not everyone is overly impressed with your underwhelming knowledge.

Cussing louder and more frequently does NOT make you more easily understood...It just makes you look like a foul mouthed old man who's frustrated with his waning ability to hold a person's attention just by being overbearing and abusive.

And it's >>ON<< the air that I cited...But Hans, ever the bully and "King of the Hill", was just anxious to find a reason to justify his childish and ever-depreciating tone that he skipped over that part. Guess he thought no one would notice. Sucks to be him.

Darned shame he logged all that (alleged) education, only to let it go to waste when it would do him the most good.

I hope I age more gracefully than he has. That much anxiety and frustration only adds to your medical problems as you age.

too.

But...but...but...HANS!

None of THOSE words were on the "seven words" list either!

Now, are you NOW saying that that list is NOT the definitive list of words
you can't say...?!?! Or are you once again just exerting your bullyness

>Nice! The "hypocrite" thing in the thread title sure fits you well,
>and
>you seem so prideful of it. Good job.

Oh NO, Hans, I bow to YOU! You, Lennie, and a short list of others who deem
it necessary to deviate from civility and protocol in order to exert your will.

You just seem to get very defensive and quick to claim victim status when
it get's fed back to you.

And as for alledging OTHERS to be "hypocrites, Hans...Who signs his posts
with "73" after berating and demeaning the respondent...?!?!

Sheeeeeeesh.....

Do you shave BOTH of those faces, Hans, or just the one you're using at
the moment?

Steve, K4YZ

Of course they're not. I just googled them up out your old posts to show how your pompous indignant hand-wringing about bad language rings as hollow as your empty morals.

That, and to watch you jump like a puppet when we pull your strings.

In article <PsCdnTEq5o8yai3cRVn-sQ@comcast.com>, "Dee D. Flint"
<deeflint01@comcast.net> writes:

>The issue can't go the same as spark and AM as these two activities went
>different directions. Spark is simply not allowed due to the fact that it
>chews up so much spectrum.

There's also the fact that hams simply stopped using spark in the early 1920s.
"CW" (meaning "tube") rigs were so much more effective that by the time spark
was outlawed for hams (1927), there were few if any hams still using it.

Kind of like asking if anybody is using a 286-based computer to surf the 'net
today.

Oddly enough, spark was not completely banned from all other radio services
until 1966.

If you think our society today is undergoing rapid techological change, look at
the development of radio (both amateur and nonamateur) from 1919 to 1929.

>On the other hand AM is still allowed and has
>developed into a niche subhobby of ham radio.

Yep. In fact, it seems to me that AM has undergone a revival in the past 15-20
years.

When I first got started in ham radio in the late 1960s, there were few hams
using AM on HF compared to SSB. AM rigs that had been prized a decade or so
earlier could be had for a song, and the number of hams on AM was dropping
fast. When repeaters became popular in the 1970s, amateur VHF/UHF AM followed
fast.

But somewhere in the late 1980s-early 1990s the trend turned. Old AM rigs were
fixed up and put back on the air. Newer hams, who had never been on AM before,
began to show up on 3885 and other spots. Of course it's just IMHO, but it
seems to me there is more AM activity on amateur HF today than 30-35 years ago
- and it's growing.

>While the code test may go
>away, I doubt if code will be forbidden. And due to its usefulness, it's
>unlikely to descend to the small niche that AM has.

I hope you're right, Dee.

I wonder if they seized the customer lists for evidence?????

<quote from arrl letter 3 dec 2004>

==>ALLEGED ILLEGAL "AMATEUR" TRANSCEIVER MARKETING DRAWS HUGE FINE

The FCC has proposed fining Pilot Travel Centers LLC $125,000 for allegedly marketing unauthorized RF devices--specifically, transceivers labeled as Amateur Radio Service (ARS) equipment but intended for use on both Citizens Band and amateur frequencies. CB transmitters must receive FCC certification--formerly called "type acceptance." Amateur Radio equipment does not require FCC certification. The Notice of Apparent Liability (NAL) released November 22 asserts that Pilot continued to market CB transceivers labeled as amateur gear despite multiple citations and warnings.

"Commission field offices issued a total of nine citations to Pilot's corporate headquarters and its retail outlets warning Pilot that future violations would subject Pilot to penalties including civil monetary forfeitures," the NAL said. The Commission alleges that from October 2002 until last July, Pilot, in 47 separate instances, offered for sale various models of non-certificated Galaxy CB transceivers labeled as "amateur radios" that easily could be modified for CB operation. The FCC says in some instances, Pilot employees referred to the units as "CBs."

The ARRL expressed its full support for the FCC's enforcement action against Pilot. "The marketing as 'Amateur Radio' equipment of transceivers that are intended for other uses causes widespread interference to licensed radio amateurs operating within their allocated frequency bands," ARRL CEO David Sumner, K1ZZ said on the League's behalf. "We hope that the Commission's long-awaited action will be followed by additional measures taken against marketers who persist in similar violations."

Following up on complaints received between 2001 and 2003, FCC Enforcement Bureau field agents visited 11 Pilot retail outlets in Texas, Oregon, California and Nevada. "At these locations, the stores displayed and offered for sale various models of non-certified CB transceivers marketed as ARS transmitters," the NAL said. The FCC's Office of Engineering and Technology (OET) already had determined that the units could be modified easily for CB operation and were subject to FCC certification prior to marketing.

Responding to the citations, Pilot told the FCC that all of the radios in question were "marketed as amateur radios and, as sold, operate on the 10-meter amateur band." Pilot contended the units fell under Part 97 rules and didn't require FCC certification. In January 2002, the FCC Dallas Field Office advised Pilot that the devices referred to in the Citation had built-in design features to facilitate CB operation and that the FCC

considered them CB transmitters that fall under Part 95 rules. The NAL says the Dallas Field Office received no further response from Pilot.

The FCC pointed out that it requires a grant of certification for any Amateur Radio Service transceiver designed to be easily user-modified to extend its operating frequency range into the Citizens Band.

The FCC said that on three days last December, FCC agents purchased Galaxy transceivers from different Pilot retail stores. The OET subsequently determined that all were non-certificated CB transmitters under the FCC's definition. Those sales provided the basis for the proposed fine. Ultimately, the FCC alleged that Pilot offered non-certificated CB transmitters for sale on 13 occasions in 2003 and 2004 "in apparent willful and repeated violation" of the Communications Act of 1934 and FCC rules.

Citing its concern with "the pattern of apparent violations" in the Pilot case, the FCC actually adjusted the base forfeiture amount upward from $91,000 to $125,000. "We are particularly troubled that Pilot continues to violate these rules despite receiving nine citations for marketing non-certified CB transmitters," the Commission said in the NAL. "Pilot's continuing violations of the equipment authorization requirements evince a pattern of intentional noncompliance with and apparent disregard for these rules."

Pilot was given 30 days to respond by paying or appealing the fine.

Ham radio operators own the amateur radio assigned frequencies no more than
any other person...ham or not!

The frequencies are owned by the public. The FCC has been charged with
"managing" those frequencies by congress. These frequencies can be
re-assigned to other services.

Hi,

Was wondering where I can find current FCC regulations besides the FCC site, which is difficult to schlep though.

Anyone knowing of a good site that explains current regulations can reply to this posting.

If there is a FAQ for the group, or charter, please advise also.

Thanks,
TrueAmerican

For US Amateur Radio

Try the ARRL Web site has Part 97
http://www.arrl.org/FandES/field/regulations/news/part97/

All services at the FCC site -- easy to navigate
http://wireless.fcc.gov/rules.html

The FCC should take all those attorney political appointments to the FCC Commission and use them to take care of obvious illegal intent to sell ham gear to unlicensed ops by Pilot Travel Centers and the abusive transmissions by K1MAN - and leave technical decisions, such as allowing BPL only if it doesn't destroy HF radio reception, to people with technical training and comprehension.

I have worked in this field for years. Most pirates broadcasting numbers are either reading random numbers, or are just having fun with a friend. Unless they use a very very easy key, nobody is going to actually break it. Now it is easy to use brute force to eventually get a meaningful message out of the numbers, but it is almost certainly not the intended message. It is like the monkeys with a typewriter who, statistically, will eventually type out all the works of shakespeare by accident.

>
>Of course they're not. I just googled them up out your old posts to show how
>your pompous indignant hand-wringing about bad language rings as hollow as
>your empty morals.

Let us not forget that lovable Yiddish pejorative, PUTZ, used by his
nobleness, in hundreds of sign-offs.

PUTZ is common Yiddish and is used (when not meaning "to polish")
as a euphemism for "penis head" as in those who think only with
their brains in the male genital organ.

In another thread, someone with the pseudonym "TrueAmerican" used
another common Yiddish word "schlepp" (to drag through many things
or slog a long distance). ["schlepp" is not a pejorative but its origins
are very UN-American, heh heh]

Apparently, any euphemism in a language not commonly used by
a group is "okay" or "correct."

Hypocrisy is alive and well and living, among other places, TN. :-)

>That, and to watch you jump like a puppet when we pull your strings.

...works every time! :-)

"Business people" doing "QSOs?" :-)

"Business people" don't engage in so-called radiosport of
contesting to see how many contacts can be made in a given
amount of time.

>> First, there's NO "need" for any U.S. amateur to communicate with
>> Japanese amateurs, nor any other amateurs whose languages are not
>> English...not any more than a Japanese amateur being required to
>> communicate with a Chinese, Korean, or Russian amateur.
>
>If you chase DX you "need" to.

There is NO regulation, stipulation, or implied "need" to "chase DX"
in Part 97, Title 47 C.F.R., nor described in the Radio Act of 1934
nor the Telecommunications Act of 1996.

>Our Q signals are not specifically English only acronyms,
>but a code of sorts for some specific concept. "QRM" means
>"man made interference" in English, but in some foreign
>language in Asia it means "yik blwu puq".

Letters Q, R, and M are clearly of the English alphabet.

"Morse code" is based on the English alphabet plus numerals
and common punctuation.

Most, but not all, Asian languages are syllabic or idiographic,
having NO "western" alphabet at all.

>Which has no similarity
>in sound of the spoken word from English to some Asian
>language. But the idea is delivered. In Iraq, I doubt that
>the bad guys call rocket propelled grenades "RPGs", but

>"blah uyew boom" or whatever in Iraqian. To them "RPG"
>is an acronym that doesn't match their words. Q signals
>don't match any language's words, thus are language
>independent.

Arabic, spoken or written, has NO counterpart to any western
alphabet.

"Morse code" as standardized by the ITU as "International
Morse Code" is still based on ENGLISH and the so-called
western alphabet and common punctuation, plus numerals
that had their origin in Arabic culture.

"Q codes" are merely JARGON, a sort of short-hand. The same
is true for other things such as the symbols used on international
roadways (no language at all, just graphics) or the red-yellow-green
of traffic lights for stop-caution-go (not really graphic much less a
language).

You emphasize these "Q codes" because they are YOUR jargon
used in YOUR amateur radio telegraphic activities. That has NO
bearing on any administration's need to regulate civil radio use
by way of licensing OTHERS.

>>>This is
>>>because CW uses prosigns and abbreviations (such as the Q-Code) which mean
>>>the same thing world wide regardless of language. Now, what other mode
>>>allows you to do that?
>
>People say them in phone. Still shorter than saying
>all those words. And if the contact is not fluent in
>English, he still gets the idea.

[try not to argue with yourself... :-)]

I was quite familiar with certain "Q codes" 51 1/2 years ago and
used them in very definitely NOT amateur radio communications,
the only telegraphic modes being TELEPRINTER not on-off keying
by manual or automatic means. "QSY" is simply JARGON in
certain radio activities refering to a change in operating frequency.

Yes, abbreviations are very useful to cut down on time in
explanations. In my design activities, I rarely use the full term
"bistable multivibrator" much less "Eccles-Jordan bistable
multivibrator" but I and my contemporaries use "flip-flop" to mean
the same thing. In writing or circuit descriptions, one can
abbreviate that further as simply "FF" and have it understood by
anyone else familiar with digital circuitry. Futher, a "74" used
in the same context would refer to the common dual flip-flop of
the TTL digital family ("TTL" an acronym of "transistor-transistor
logic"). More JARGON, acronyms, abbreviations which are
understood in non-western-alphabet electronics perhaps by more
than in amateur hobby radio activities.

On radio, the phrasing "descend to and maintain four thousand, be advised traffic at 9 o'clock" would pertain solely to civil airways communications. That is JARGON in civil flying. The word "traffic" has NO connotation to the amateur radio use of "traffic." The "o'clock" has nothing at all to do with time but refers to the representation of direction from the pilot's point of view. JARGON.

I'm coming up on 52 years since I first keyed on an HF transmitter for telegraphy (RTTY) communications. "Q codes" and "prosigns" originated long before that in manual telegraphy...yet the only "Q codes" that I've used then and since (in more military and commercial communications not as a military person) were just JARGON that was used for convenience. Such jargon as no real "magic" or "power" that is absolutely a requirement for licensing anyone in radio by federal authorities.

On Sat, 4 Dec 2004 08:25:51 -0500, Dee D. Flint wrote:

>I would not use it over the air as vulgarity is also not allowed.

The prohibitions in Federal criminal law are:

18 USC §1464. Broadcasting obscene language.

Whoever utters any obscene, indecent, or profane language by
means of radio communication shall be fined under this title or
imprisoned not more than two years, or both.

The prohibitions in FCC Rules are:

97.113 Prohibited transmissions.

(a) No amateur station shall transmit:

(4) ... obscene or indecent words or language; ...

[Note that the "profanity" proscribed by Section 1464 is not
present in the Part 73 rule, but I would not want to be the one
to push the issue.... <ggg>]

The "Cliff Notes (R)" on this subject, in an FCC Publication "The
Public and Broadcasting" are aimed at broadcast stations but the
prohibition has been deemed equally applicable to Amateur stations
by case law:

Obscenity and Indecency. Federal law prohibits the broadcasting
of obscene programming and regulates the broadcasting of
"indecent" language.

Obscene speech is not protected by the First Amendment and cannot
be broadcast at any time. To be obscene, material must have all
three of the following characteristics:

an average person, applying contemporary community
standards, must find that the material, as a whole, appeals
to the prurient interest;

the material must depict or describe, in a patently
offensive way, sexual conduct specifically defined by
applicable law; and

the material, taken as a whole, must lack serious literary,
artistic, political, or scientific value.

Indecent speech is protected by the First Amendment and cannot be outlawed. However, the courts have upheld Congress's prohibition of the broadcast of indecent speech during times of the day when there is a reasonable risk that children may be in the audience......[discussion of "safe harbor" broadcast periods deleted]... Indecent speech is defined as "language or material that, in context, depicts or describes, in terms patently offensive as measured by contemporary community standards for the broadcast medium, sexual or excretory organs or activities."

Profanity that does not fall under one of the above two categories is fully protected by the First Amendment and cannot be regulated.

Do you find "vulglarity" amongst the material above? I sure don't.

Use or non-use of vulgarity is much more of an issue of one's upbringing and command of the language.

And as every communications or constitutional lawyer knows, the
"Seven Dirty Words " (not the actual title of the monologue by
George Carlin) has no standing at all in law, and was attached to
the Supreme Court's _Pacifica_ decision only because it was the
thing that the original complaining listener objected to being
broadcast.

The FCC has never used a list of words for enforcement purposes.

So does "Matshushita", Japan once had a prime
minister "Mr Takeshita". ANother guy from Japan
once gave a paper at a cunsumer electronics
convention, Mr Fukuda. But I think the FCC
won't have a problem with any of these except
"bullshit".

I guess that explains how and why I once heard the word
"Motherf*cker" on terrestrial broadcast TV around 10:30PM.
Channel 17 in Philly showed "Fort Apache the Bronx" then.
Or is it that the rules are looser if your station carrier
is above 200MHz? :-)

RF,

Not true, and I have proof. I saw it on the Simpsons. To quote:

[...] For example, in the same episode, Mr. Burns has a thousand monkeys feverishly typing at random, hoping they will produce the greatest novel ever written. This reminds me of the Platonic theory that given enough time, everything you can conceive of will eventually happen. Random patterns, given enough time, will show themselves to be not so random after all.

When Mr. Burns pulls a piece of paper out of one of the typwriters, he reads "It was the best of times it was the BLURST of times."

Begin with remedial English. For example, there's no apostrophe required of the plural form of "get."

"Professional recognition?" In what, your basket weaving?

There's NO real "professional recognition" in being a purchasing agent for a few months, thinking all will "recognize" your so-called "knowledge of electronics and engineering disciplines."

>..Just like YOU did, Lennie!

Nope. Not at all what I did.

First of all, you have to learn social skills, of getting along with others who clearly see that you are doing wrong and commenting about it. You cannot continue to go through life calling all your "opponents" bad names and be recognized as anything but a yutz or a schmuck. But, you continue to act the social barbarian and trash-mouth every "opponent" at every opportunity. Tsk.

It helps one's career choices to wind up lucky and get a most interesting military task early such as I did...working HF communications (long distance) on a 24/7 basis with a variety of equipment (state of the art at the time). From there on, it's a matter of acting on it, taking action by getting into the industry and learning. Learning includes how to interact with other humans without the constant name-calling, hostility, and open aggression just because they don't agree with you.

> PUTZ!

Tsk. There you go again, constantly on the subject of penises.

Not only that, but using a language-dialect that you don't know well (if at all). No Menorah lighting for you, bubbeleh.

Tsk, tsk, tsk. I was into HF communications earlier than most correspondents in here, in the military and in civilian life. You haven't done that. I took advantage of that and made my life career in it, doing well enough for me. You haven't done that in radio or electronics.

Any large urban area has college-credit courses available in night classes. The subjects are the same as those in day classes, the problems as hard and challenging despite the classroom hours. You can take advantage of that for self-education and be able to DO something...instead of relying on pretty certificates and title collecting (which don't do any task by themselves). All those certificates and titles are just so much fertilizer going to waste if you can't use the knowledge they say the recipient has.

Electrons, fields, and waves aren't influenced by human BS, threats or anything else done by human beans.

<snip>

Heh heh heh. Watch all the "learned discourse" generated by using a different screen name.

Miccolis will have fun listing all the screen names I've used in the past (where he still lives most of the time). Heil will probably take some bitters and spout nasty things about "not being 'interested' enough" in radio to get a ham license "first," therefore I am "not involved!" :-)

Robeson MUST come back with more personal insults and use of little Yiddish pejoratives because he is an obsessive-compulsive involved in constant fighting about almost everything.

All those poor hams with such thin skin...no amount of honey basting will ever give them any good taste... :-)

You are NOT an "OPPONENT", Lennie..."Opponent" would suggest taht you are
equal to the task of the argument, and you are a FAR cry from it!

The name "Leonard H. Anderson" only invokes the ideation of lying,
deception and failed promises.

Sorry, Lennie...All the "certificates" I've collected ARE professional certificates and DO directly compliment my professional bearing.

All my Amateur Radio certificates are for fun.

You wouldn't know about that. You're not a licensed Amateur. You're an outsider.

> Electrons, fields, and waves aren't influenced by human BS,

You're NOT "involved", beyond this forum.

> Robeson MUST come back with more personal insults and use of
> little Yiddish pejoratives because he is an obsessive-compulsive
> involved in constant fighting about almost everything.

The only way to "fight" is for there to be two people involved.

You keep lying and acting like a fool. I keep holding a mirror up for you
to see it and you get confused as to who's doing what. Not my problem.

> All those poor hams with such thin skin...no amount of honey
> basting will ever give them any good taste.

And no number of screen names will ever make you an experienced, licensed
Amateur Radio operator...Or even human, for that matter....

Just a putz.

I'm confused. Does this mean that the American Nazi Party has an amateur radio club?

We used to have a large collection of Nazi's here until Richard Butler was run out of town and croaked. I know that they did a lot of illegal shortwave broadcasting from Hayden Lake and Sandpoint, Idaho and Spokane, Washington. But I wasn't aware that they had an actual ham club.

>
> I was in Avionics for 20 years.

You crawled into a little black box for two decades? :-)

No, you CLAIM to have done that in the USMC...but you were
not in service for the whole twenty years. Tsk, tsk.

Swapping black boxes according to the prepared instructions
and procedures is not quite being "in" aviation electronics.
You have failed to mention a single aviation electronics system
by name or nomenclature and you cannot recognize the names
and nomenclatures of very common military communications
equipment. Those who were truly "in" aviaonics should have
near-instant recall of such familiar things...if they were really "in."
Stevie hasn't done so.

Ergo, one has to suspect Stevie is (horrors!)....LYING! :-)

> Now I've chosen to follow another of my many desires.
>
> Howman people can say they've done more than one thing in their life?

I've never met any "Howman people."

However, if you meant the question to start out with "how many,"
then the answer would undoubtedly be Nearly Everyone.

Stevie tries to sidestep any names or nomenclatures of avionics
he was supposedly "in" because he doesn't seem able to recall any.

Other than that, Stevie can't even recall any names or nomenclatures
of radios or radio systems used in USMC radio communications.
There's lots of that and the details are NOT sensitive or classified.

>> Any large urban area has college-credit courses available in

>
> Sorry, Lennie...All the "certificates" I've collected ARE professional
>certificates and DO directly compliment my professional bearing.

Tsk. None of those certificates have anything to do with RADIO or
of Electronics Engineering, do they? :-)

> All my Amateur Radio certificates are for fun.

Then you must be into weird masochistic "fun" by trying to elevate
yourself past the hobbyist stage into a weird sort of "professional
amateur." :-)

Tsk. You can't have it both ways.

> You wouldn't know about that. You're not a licensed Amateur. You're an
>outsider.

Tsk, tsk, tsk. No, I'm an INSIDER to RADIO, been farther INTO it
longer than Stevie has, done more radio communications than he
has time for and done it longer than him. Tsk, tsk.

That is NOT the subject, though the busy misdirection manufacturing
tries to make the lack of federal authority to transmit on amateur
bands is some kind of "negative" attribute. :-)

I've been federally authorized (as some ardent title-and-status-hungry
hams like to state it) to transmit RF over a much farther extent of the
EM Spectrum than any amateur authorization in the USA allows.
Since 1956. But that's not the point.

Stevie has NO valid reply here but cannot help himself in his hatred
compulsion-obsession against all "opponents" in this newsgroup,
hence all the trash-talk he spews.

>> Electrons, fields, and waves aren't influenced by human BS,
>> threats or anything else done by human beans.
>
> Speaking of needing remedial English, Your Putziness.....................

Nothing "remedial" needed. Merely writing style.

Electrons, fields, and waves do not pay attention to "personal
insults" done by trash-mouths. :-)

> Back under your rock, Scummy One.

Tsk, tsk, tsk...still in trash-mouth mode. Pity that. All those fancy "certificates" and still not able to handle newsgroups and other correspondents. Not a good example of a U.S. amateur extra licensee.

>and I've asked you to please "show" where you think >>I<< have...Still nothing.

"Nothing" needs no elaboration. It is merely nothing.

Stevie knows not of real electronics engineering, yet has tried to pass himself off as "knowing about it" in here.

A null thing, nada, absence of any knowledge of that.

> You are NOT an "OPPONENT", Lennie..."Opponent" would suggest taht you are
>equal to the task of the argument, and you are a FAR cry from it!

No sweaty-dah. In terms of writing and getting along with people, I'm so far ahead of you that it's not any sort of "contest." :-)

> The name "Leonard H. Anderson" only invokes the ideation of lying,
>deception and failed promises.

Tsk, tsk, tsk. More trash-talk. Just the hatred behind your ungentle facade welling out. Sort of like a large pustule venting noxious smells dribbling over the edge of a bandage...

>> Learning includes how to interact with other humans
>> without the constant name-calling, hostility, and open aggression
>> just because they don't agree with you.
>
> I don't tolerate liars. You're a liar.

Not in this forum.

Stevie makes an almost capital offense out of LYING. He's done that for years. Others don't seem to go at the subject of LYING so much and so obsessively as Stevie. Tsk. Tsk.

Anyone would conclude that Stevie has tried to LIE his way into many things, One example is the foray into "engineering" which didn't last very long...nor get any farther than being a purchasing agent (according to his own postings). In other words, Stevie just BSed his

way in (egregious use of LYING other places), couldn't cut the
mustard, and the job was no longer.

However, the over-use of LYING as a negative attribute to
"opponents" leads to another favorite Stevie schtick: Trying to
establish "humiliation" where there is none. One example is -

>>> PUTZ!
>>
>> Tsk. There you go again, constantly on the subject of penises.
>
> No...YOU are into penises, Lennie. Your own. You think it's bigger,
>better and more prolific than any one else's. Unfirtunately it's the only
>"head" yoiu thik with, because IF you were using the onther one, you MIGHT
>realize what an idiot and fool you've made of yourself these past many years.

Tsk. The subject isn't about "male organs," it is about the use of a
non-native ethnic pejorative. Stevie is not native to Yiddish. He is
goyim.

The thread is now remanufactured by Stevie to attempt humiliation.

Poor thing. I've had a whole career in radio-electronics as a paid pro,
plus a longer time as a hobbyist in electronics. All Stevie has is a
"title," some point scores from some radio contest, and a pretty
certaificate (suitable for framing)...as an amateur.

As another PCTA extra was once fond of quoting (or misquoting,
depending on a sub-thread), "It ain't lying if ya done it!"

I've done it. Stevie just can't stand that and the fire lights up behind
his eyes... :-)

>"professional" engineering to Amateur Radio in order to get your name in
>print, Lennie.

??? I'm still getting money for engineering services rendered
and I'm still writing when I feel like it. :-)

Tsk, more bad trash-talking. Stevie just hasn't done any technical anything in radio or electronics and feels obsessed by that? Must be since Stevie's name isn't in print (defunct or not) for any technical things.

Note: Name-calling is not "technical." It is emotional.

Obviously, Stevie is in a heated emotional state, hence all the trash-mouthing.

> The FCC has never used a list of words for enforcement purposes.
>
>--

People forget that Carlin's routine was meant to be *comedy*, and as such was not meant to be taken as fact. But as sometimes happens, it started an urban legend.

btw, George Carlin is often listed as the author of things he never wrote.

It is my impression of the rules that FCC is more concerned with context than the actual words. The reason for the hullaballo (and fines) over the Janet Jackson
"wardrobe malfunction" (as I understand it) was that it was not to be reasonably expected in a football halftime show. IOW, it was completley unexpected in the context of the program.

Contrast this with "Saving Private Ryan", which was aired unedited despitre its violence and language. The audience was cautioned of the film's content before and during the broadcast. The film's MPAA rating is public information, too. Most of all, the language and violence were in an accurate context, and were an integral part of telling the story. Thus, certain language could be used that would rate a fine in a different context.

The way all this relates to amateur radio is: We hams do not usually operate on a published schedule, nor do we have a rating system to let listeners know ahead of time what to expect. Therefore, all amateur radio communication must, by the rules, be "G rated" - or run the rsik of enforcement action.

At least IMINALO (In My "I'm Not A Lawyer" Opinion)

I've PROVEN that I was an Avionics technician in the USMC. Provided
MOS'es.

And the Armed Forces is NOT the only venue in which I have worked in
Avionics.

> Swapping black boxes according to the prepared instructions
> and procedures is not quite being "in" aviation electronics.

Well LENNIE! >>>YOU<<< frequently claim to having been in "HF Radio" in
teh Army, yet the MOS's YOU provided were for nothing more than being a radio
mechanic, basically the same thing!

So which set of rules are YOU functionly by today?????

Yes, I recommend CT. It's still pretty much the 'gold standard' in contesting software, can't beat the price, and the support is first-rate. Bob Gates should support his stuff as well as K1EA does!

Didn't hear you in ARRL-160 this weekend. Condx were phenomenal. Had a JA call >>ME<< on Saturday night.

Tsk, tsk, tsk...more falseness by the Avenging ANGLE. :-)

There's no such thing as a selective "killfile" that makes only
some of the postings invisible.

Poor Avenging ANGLE, off on a false tangent again. Compulsive-
obsessive hatred behavior absolutely requiring him to reply to each
and every posting of mine...complete with trash-mouth babblings.

> You're NOT "involved", beyond this forum.

NOT a requirement, Angle. My advocacy is simply to eliminate the
morse code test for any U.S. amateur radio license examination.
That would allow more radio hobbyists to achieve that most-prized
"federal authority" called an AMATEUR radio license.

you
>to see it and you get confused as to who's doing what. Not my problem.

Tsk, tsk, tsk...it IS the Avenging Angle's PROBLEM.

Stevie holds up a mirror but forgets he is looking at his own reflection.

>> All those poor hams with such thin skin...no amount of honey
>> basting will ever give them any good taste.
>

> And no number of screen names will ever make you an experienced,
>licensed Amateur Radio operator...Or even human, for that matter....
>
> Just a putz.

Stevie hoists his invisible cape as the Avenging Angle, right-eously spewing trash-mouth babbling against all His enemies. :-)

Stevie calls it "reasonable discourse." Others seem to think it is just trash-mouth activity by those perpendicular to logic and reality. :-)

Tsk...Avenging Angle's shortcomings are too small for much noting
in here except some blatancies such as "Sorry Hans, MARS >>IS<<
amateur radio!" :-)

>> But, you are back in trash-talk personal insult mode...as usual.
>
> I have to Lennie. You have a hard time speaking civilly, so I just
>bring it down to your level for your benefit.

Bring it UP to my level, Avenging Angle, bring it UP... :-)

Tsk, poor Stevie has difficulty getting it up? :-)

"Civility" is NOT the same as agreement or capitulation to the
trash-mouth barbarians in here who hurl personal insults willy-nilly
as if that was "reasonable discourse." :-)

>> Tsk, more bad trash-talking. Stevie just hasn't done any technical
>> anything in radio or electronics and feels obsessed by that? Must
>> be since Stevie's name isn't in print (defunct or not) for any
>> technical things.
>>
>> Note: Name-calling is not "technical." It is emotional.
>>

>> trash-mouthing.
>
> I am sure you wished it were true.

No "wishing" necessary. Proven to all who can access this
newsgroup. Stevie Robeson is obsessively compelled to "reply"
to all of my postings with his standardized trash-mouth comments.
That's practically a constant.

Nothing need be "proven" when the proof is presented in Stevie's
"replies" over and over again.

> Back in the bag, Anderscum.

Tsk. More trash-mouth talk.

>You still have nothing to offer Amateur Radio except your usual vileness.

"Offering?" :-)

A votive offering? A tithe to the Church of St. Hiram? Why must an
"offering" be presented?

This is simply a trolling subject thread, no more, no less. :-) It
delineates the Avenging Angle's obsessive-compulsive hatred
behavior which is presented to all who can see his "replies."

"Vileness?" What vileness...that of not capitulating to little Stevie's
demands and play-acting as one who does "reasonable discourse"
and then uses terms such as "Anderscum" or "Putz?" Is that what
the top-most classes in U.S. amateur radio demonstrate as "the
best that they can be?"

Tsk, tsk, tsk.

> I've PROVEN that I was an Avionics technician in the USMC. Provided
>MOS'es.

Tsk, tsk, tsk. No "proof" has presented...only CLAIMS were
written.

Avenging Angle Stevie can't mention a single avionics system
by name, nomenclature, or even familiar name, nor any of the
aircraft those were supposedly on. Those who were "in" some
activity should be able to mention at least ONE such name.

> And the Armed Forces is NOT the only venue in which I have worked in
>Avionics.

Irrelevant and not "proving" anything other than an IMPLICATION.

Name where, when, and with what to be believed.

> Well LENNIE! >>>YOU<<< frequently claim to having been in "HF Radio" in
>teh Army, yet the MOS's YOU provided were for nothing more than being a radio
>mechanic, basically the same thing!

Tsk, tsk, tsk. NOT the same. There was NO "radio mechanic"
phrasing at all in those old (half-century ago) military occupation
specialty descriptors. I've supplied the exact phrasing as used on
my old orders and documents, the job tasks as recognized by
photographic records of the U.S. Army Signal Corps (always with
the mimeographed imprint on photo backs in the old system of
photo distribution), plus the Pacific Stars & Stripes military
newspaper...plus the correspondents of a few of us who had been
there, done that, at least one of which is an amateur extra
licensee.

"Radio mechanic" was once used in foreign air force military
occupations way back in World War 2 denoting "fitters" (the
usual RAF term, I believe) of aircraft radios in military aircraft.

Is there ANY "radio mechanic" term in use anywhere denoting
those who service/repair avionics? I doubt it. Over three decades
ago, the real mechanics (those handling machinery and metal
working) on aircraft in the USA used the term "Airframe and Power
Plant" rather than just "mechanic."

> So which set of rules are YOU functionly by today?????

Illegible meaning. Rephrase the question again.

>> You have failed to mention a single aviation electronics system
>> by name or nomenclature and you cannot recognize the names
>> and nomenclatures of very common military communications
>> equipment. Those who were truly "in" aviaonics should have
>> near-instant recall of such familiar things...if they were really "in."
>> Stevie hasn't done so.
>
> Sure I have.

Tsk. More BLUFF. Those who were truly IN any activity can
recall at least one item that was familiar. The Avenging Angle
Stevie still cannot.

Those who were in the military of recent 20 years can identify
even with short-form nomenclatures/names such as "104" for
the basic HF backpack radio, AN/PRC-104. Of the last decade
even non-radio types would know of the "Plugger" (a quaint
military euphemism for what the soldiers called a "pissin-eleven"
or AN/PSN-11 GPS receiver). An "arc-two-ten" ought to be
familiar with avionics types, a spoken familiar name for the
AN/ARC-210.

>> Ergo, one has to suspect Stevie is (horrors!)....LYING!
>
> Ergo YOU are the liar. Again.

Tsk. Avenging Angle Stevie ought to get off his hypotenuse
(the some of the squares of his claimed sides) and drop at
least one name. Stevie hasn't yet he babbles things like
"sure I did" or "I've been involved in other avionics" instead of
a casual mention of equipment.

The only conclusion possible is that Stevie was NOT "in"
anything after all...just bluffing his way and claiming expertise.

> Same silly rantings of a very angry, disillusioned and desperate "man".

"Angry?!?" :-) :-) :-)

Nope. If anything, I can come in here and see lots of the "Stevie"
comments showing he is holding up a mirror, looking at himself,
and calling others what he sees in that mirror. :-)

"Disillusioned?" Nope. Realist. I've "made mine" in this life and
am fairly content...comfortable income, nice house all paid for,
a lovely wife who was my high school sweetheart, and my GP
says I'm in good health. If anything is "disillusioning" it is that
chocolate is not in the food pyramid recommended by
certificated dieticians. :-)

"Desperate?" Not quite although I was a bit irritated two weeks
ago when Allied Radio was continuing to hold up a large order
due to need for filling a back-order. Needed those parts to
complete a task here. That was resolved. No sweat.

> You ARE a liar.

No, I can back up all that I've written via independent references.

> You ARE deceitful.

Some ex-girlfriends have implied that, once upon a time. :-)

[that was between marriages, alas, no more...]

> You do not do what you say you will do.

Tsk. You don't believe I'm working on an anti-gravity invention? :-)

My advocacy is simply to eliminate the morse code test element
for all U.S. amateur radio license examinations. I don't have any
advocacy to "get a ham ticket" nor have much personal desire to
do so. Based on the behavior of some resident ham "examples"
such as Stevie the Avenging Angle, I doubt many would be
attracted to getting such a "ticket."

> You're a scumbag. Period.

I don't have "periods." [had some Pernod once, was okay...]

Tsk, the last time I was involved with Real Scum was about
six decades ago, playing in an old creek bed...:-)

> Back in the bag, Lennie. I see you've not changed a bit.

"Changed?" :-)

Yes, I continue to be disrespectful to those who keep on trash-mouthing with those personal insults instead of trying to get on the SUBJECT of actual policy matters. I will not capitulate to any loud-mouthed PCTA extras who think they "own" this newsgroup by boastful trash-mouthing on others. Bank on it. :-)

> Putz.

Aren't you celebrating Hannukka this year, goyim? :-)

Say hello to your neighbors on Maxwell Street in the Windy City. :-)

Actually there may be a ham radio angle in this. This implies
that, in a digital messaging system like packet or amtor
or such, more error correction should be applied to the
first and last letters of words, and less spent on the
letters in the middle. Thus increasing thruput under
adverse conditions. Or apply a compression scheme on
the middle letters (spend more resources to relay the
letters used in the middle of words, and less resources
on the order of those letters that make up the middle
of words). So when things get noisy the first thing that
gives out is the correct order of the middle letters
of words.

Actually, I'd rather just get it in the right order the first time instead of trying to figure out how to jumble it up just to un-jumble it again! That's a fun thing to do on the puzzle page of the Sunday paper...not handling traffic.

If this was applied just to operator-to-operator chatter perhaps, but in a "messaging system" it would be a poor way to increase throughput.

All that aside, digital messaging systems don't handle words, they handle characters, and a space is just another character in the data stream.

My overall length is 158 feet. The vertical section is 65 feet, and the horizontal is 93. This is somewhat longer than the 'classic quarter' design, but seems to work better for me. Rather than think of it as a quarter wave antenna, I visualize it as a very short toploaded vertical. I feed with 50-ohm coax, and a small variable series matching capacitor (I think it's around 400-100pf). My counterpoise is 8 random length radials, plus four 10-foot copperclad ground rods.

Sounds like the cat's meow!

Lessee....I have an old 486DX4100 desktop that needs a hard drive. Probably have one or two HDs that are too small for Windows use but that will do the job for DOS. Old dotmatrix printer, ancient-but-good little monitor....this could be interesting.

Just built me a "new" computer to replace the old one whose motherboard went bad. Looks like a Dell on the outside but only the case is from that company.

Have to build an interface to key the Southgate Type 7, though. Nice old CP Clare mercury wetted relay should do the job...

>Bob Gates should

How much voltage on the keying line? Unless it's grid-block keying or similar, you won't need a relay.

Serial port keying (assuming the radio is positive keyed) can be built into a DB25 or DB9 connector shell using only a single resistor and a junk-box transistor.

Hang a 1K resistor on DTR (pin 20 on a DB25, pin 4 on a DB9). Other end of the resistor to the base of a small-signal NPN (I use a 2N3904 cuz it was in my junk box, but 2N4401 or others similar will be just fine). Connect the emitter and the transmitter ground return to Signal Ground (pin 7 on a DB25, pin 5 on a DB9). Connect the collector directly to the transceiver key input.

I guess you are joking, but if not - do not confuse randomness with
probability. Mathematically they are completely different things, while they
seem similar in everyday life.

Dear Radio Friends,

It becomes my painful duty to write you a letter of apology instead of sending you the Christmas remembrance that I had intended for you.

Knowing so well the appetites, likes and dislikes of my close rrap friends, I made up a list of twelve of my best friends and went down and bought twelve quarts of "Royal Canadian" seven-year-old whiskey. Nothing but the very finest for my friends. I took this home and put it in my closet and intended to put it up in nice Christmas packages and send it out to you just before Christmas.

My wife, K0CKB, got to fumbling around in the closet and found the liquor and didn't understand just what I intended to do with it. So she came up and told me to empty the contents of every bottle down the sink, or else. So I proceeded with the unpleasant task.

I withdrew the cork from the first bottle and poured the contents down the sink, with the exception of one glass which I drank. I extracted the cork of the second bottle and likewise poured the contents down the sink, with the exception of the glass which I drank. I pulled the sink from the next bottle from the cork of the next and drank one sink out of it and threw the rest down the glass. I pulled the sink out of the next glass and poured the cork from the bottle. Then I corked the sink with the glass, bottled the drink and drank the pour.

When I had everything emptied, I steadied the house with one hand and counted the bottles, corks, glasses, and sinks with the other, which were twenty-nine. And, as the houses came by, I counted them again and finally had all the houses and bottles and corks and glasses and sinks counted, except one house which I drank.

So this accounts, dear friends, for your not receiving a more stimulating Christmas present than this letter. I sincerely hope that from some other source you get all the joys and happiness that come from Christmas remembrances.

"May the Lord take care of you, but not too soon."

I'll check that out! Have some of junker DB9 and '25 connectors from various sources. Might need something beefier than a 2N3904 but that's not a problem at all. Beats dealing with the inductive kick of the relay coil.

Worse comes to worse, a small pentode could be used as a keyer tube to drive the relay. With low plate voltage the key line could be just a few mils and volts above ground. Probably won't need to go that far, though.

Thanks Hans!

Just in case "Santa" observes this newsgroup, he may be wondering about Christmas desires! Anyone have that special piece of equipment they are hoping for?

Since I've not been on the air now in about two years, and haven't even had a radio around or hooked up in nearly a year, not sure what I'd hope for in terms of equipment. Rather, maybe I'll pull that audio/video scanner out that I bought I don't know how long ago and play with it finally.

Well Kim,

Santa Spouse pulled a fast one on me last Christmas. I wished for an Orion and hinted as much throughout the year. On Christmas day, I opened a box from Santa Spouse and a certain two elves containing a pic of the Orion and their blessing for Daddy to make the order.

Well, I think it was a conspiracy as Santa Spouse knew full well how difficult it would be for daddy to "pull the trigger" on such a purchase...so it remains a love unfulfilled to this day. "I didn't know what options you wanted." was the reply. There is only one option to be had on the behemoth, the auto-tuner...and Mongo want.

Sigh...perhaps a large box from Sevierville will find its way under the tree this year. Hope all your wishes come true this year, Kim. ;-)

Heck yes. That's not a lot compared to some rigs I've used.

Type 7 (and Type 6 before it) cathode key the Class A driver stage.

>Now I know what they mean when they say
>"N2EY sure has a hot key."

bwaahaahaa

>My idea anticipated maybe 12V keying voltage.

All it takes is a bigger transistor.

Many manufactured transceivers and trasnmitters using grid block keying put
more juice on the key than my rigs do.

Not really, Hans.

The 75-100 volts is open-circuit, measured with a VTVM. The 20 mA is
short-circuit.

Of course the pilot lights on the Type 7 (6.3 V at about .8 amp total) use more
power than many QRPers deliver to the antenna....

I tried that design for a few years myself Hans. And it did indeed work well. Then I decided to go with the classic 1/4 wave design. I really couldn't tell much, if any difference. Only advantage to the 1/4 wave design that I can see is the transmitter likes it better. Thus don't have to use a tuner or matching device.

Great question, Kim!

At this point in time I'm more focused on reducing inventory, so ham gear isn't high on the list.

But it wasn't always that way, and therein lies a tale....

For the first 7 years of my ham career, I used a straight key *only*. Bugs and keyers were simply too expensive for me at the time, and you didn't find them at the curb on trash day or behind the TV repair shops....

Somewhere in there I learned to use a bug - probably Field Day 1970 or so. And somewhere in there my family got the hint and for Christmas 1974 everybody chipped in for a brand new Vibroplex Original. Standard model, no fancy chrome or gold base or any of those doodads.

That bug has been my primary key ever since. Been on every operating desk and hooked to every CW rig I've had since. Still works as well as new. I don't even want to think about how many QSOs it has done in almost 30 years. Still have the J-37 straight key, and it still gets used now and again. Almost nothing of my 1974 station remains as it was then, except those keys.

I also have nice keyer paddle, which I am still learning to use - left handed.

A dozen or more years ago I had a Zephyr for a while, but sold it to a collector. Since then, have acquired three more bugs, all Vibroplex, all painted-base. None of them are quite like my 1974 model.

Anybody else have a similar story?

Poor Lardass, you made the spoofing of the ID and the threatening phone call, your buddy Harry Schwartz confirmed it, since you told him about it in your gay Yahoo! chat room.

Liars are liars, Wogie. Of course it was YOU who spoofed the calls over the name of Lloyd...you have a penchant for doing so.
You called Jon, you forged email addresses, and it is you who casts the blame on others while you snipe at others from the cover of your window blinds.

Easy to see, Wogie.

FCC Proposes Additional Fine for Former California Amateur Licensee

NEWINGTON, CT, Dec 3, 2004--Fast on the heels of a $10,000 Forfeiture Order (FO), the FCC has now proposed to fine Jack Gerritsen, ex-KG6IRO, of Bell, California, an additional $21,000 for interfering with Amateur Radio communications. The target of numerous complaints of insistent interference to numerous ham radio repeaters, Gerritsen already faces a $10,000 fine the FCC affirmed in October. The latest proposed fine stems from further specific alleged instances of interference between June and September of this year.

"Gerritsen's threats against other operators and his abusive use of amateur frequencies are the antithesis of good amateur practice and engineering," the FCC said in a Notice of Apparent Liability (NAL) released December 2. "Gerritsen announced to authorized amateur users that he intended to interfere with their transmissions and then proceeded to cause such interference." Based on the information before it, the FCC said it finds that Gerritsen willfully and repeatedly violated §333 of the Communications Act of 1934 by maliciously interfering with the communications of authorized Amateur Service users.

In 2001, the FCC's Wireless Telecommunications Bureau (WTB) swiftly rescinded its Amateur Radio license grant to Gerritsen after learning of his earlier state conviction for interfering with police communications. As a result of the conviction, which he's appealed, Gerritsen ultimately spent some time in jail. He has continued to maintain that the FCC can't take away his operating privileges without a hearing, and that he still has a ham ticket.

Gerritsen's now-pending Amateur Radio application is back in the hands of the WTB, which also will decide the fate of his General Mobile Radio Service (GMRS) license. The FCC set aside that grant last fall because of Gerritsen's alleged continued unlicensed operation and deliberate interference. A Hearing Designation Order for Gerritsen is said to be working its way through the FCC.

In its December 2 NAL, the Commission cited three specific instances of interference attributed to Gerritsen and mentioned several others in proposing the huge fine, which includes an "upward adjustment" from the base forfeiture amount of $7000. The NAL notes that in determining a fine, the Commission may consider the nature, circumstances, extent and gravity of the alleged violations as well as the suspected violator's history of prior offenses and degree of culpability. "Despite warnings and a prior NAL and Forfeiture Order, Gerritsen's unauthorized willful

and malicious interfering radio operations have been ongoing for several months," said the NAL, signed by FCC Los Angeles Office District Director Catherine Deaton.

In one instance in September, the FCC said, a complaint from an ARRL Official Observer alleged that Gerritsen "deliberately and maliciously interfered with the Young Hams Net" on a 2-meter repeater. "The complaint alleged that the prerecorded messages transmitted by Gerritsen were so intense and vile they were reported to have reduced one of the younger participants to tears," the NAL recounted. On other occasions, an individual identifying himself as Jack Gerritsen and/or using the KG6IRO call sign, has monopolized various LA-area repeaters for long periods, the FCC said, preventing other users from accessing the machines.

Several times, FCC agents have tracked interfering transmissions to Gerritsen's residence. Commission representatives have advised him that he does not have authority to transmit on amateur frequencies and warned him to keep off the ham bands.

Unconfirmed but generally reliable reports say Gerritsen has not been heard on LA-area repeaters for more than two weeks now, and there's some evidence that he may be staying south of the US border--at least for the time being. He has 30 days to pay or appeal the proposed fine.

FCC Proposes Additional Fine for Former California Amateur Licensee

NEWINGTON, CT, Dec 3, 2004--Fast on the heels of a $10,000 Forfeiture Order (FO), the FCC has now proposed to fine Jack Gerritsen, ex-KG6IRO, of Bell, California, an additional $21,000 for interfering with Amateur Radio communications. The target of numerous complaints of insistent interference to numerous ham radio repeaters, Gerritsen already faces a $10,000 fine the FCC affirmed in October. The latest proposed fine stems from further specific alleged instances of interference between June and September of this year.

"Gerritsen's threats against other operators and his abusive use of amateur frequencies are the antithesis of good amateur practice and engineering," the FCC said in a Notice of Apparent Liability (NAL) released December 2. "Gerritsen announced to authorized amateur users that he intended to interfere with their transmissions and then proceeded to cause such interference." Based on the information before it, the FCC said it finds that Gerritsen willfully and repeatedly violated ?333 of the Communications Act of 1934 by maliciously interfering with the communications of authorized Amateur Service users.

In 2001, the FCC's Wireless Telecommunications Bureau (WTB) swiftly rescinded its Amateur Radio license grant to Gerritsen after learning of his earlier state conviction for interfering with police communications. As a result of the conviction, which he's appealed, Gerritsen ultimately spent some time in jail. He has continued to maintain that the FCC can't take away his operating privileges without a hearing, and that he still has a ham ticket.

Gerritsen's now-pending Amateur Radio application is back in the hands of the WTB, which also will decide the fate of his General Mobile Radio Service (GMRS) license. The FCC set aside that grant last fall because of Gerritsen's alleged continued unlicensed operation and deliberate interference. A Hearing Designation Order for Gerritsen is said to be working its way through the FCC.

In its December 2 NAL, the Commission cited three specific instances of interference attributed to Gerritsen and mentioned several others in proposing the huge fine, which includes an "upward adjustment" from the base forfeiture amount of $7000. The NAL notes that in determining a fine, the Commission may consider the nature, circumstances, extent and gravity of the alleged violations as well as the suspected violator's

history of prior offenses and degree of culpability. "Despite warnings and a prior NAL and Forfeiture Order, Gerritsen's unauthorized willful and malicious interfering radio operations have been ongoing for several months," said the NAL, signed by FCC Los Angeles Office District Director Catherine Deaton.

In one instance in September, the FCC said, a complaint from an ARRL Official Observer alleged that Gerritsen "deliberately and maliciously interfered with the Young Hams Net" on a 2-meter repeater. "The complaint alleged that the prerecorded messages transmitted by Gerritsen were so intense and vile they were reported to have reduced one of the younger participants to tears," the NAL recounted. On other occasions, an individual identifying himself as Jack Gerritsen and/or using the KG6IRO call sign, has monopolized various LA-area repeaters for long periods, the FCC said, preventing other users from accessing the machines.

Several times, FCC agents have tracked interfering transmissions to Gerritsen's residence. Commission representatives have advised him that he does not have authority to transmit on amateur frequencies and warned him to keep off the ham bands.

Unconfirmed but generally reliable reports say Gerritsen has not been heard on LA-area repeaters for more than two weeks now, and there's some evidence that he may be staying south of the US border--at least for the time being. He has 30 days to pay or appeal the proposed fine.

It's probably N8WWM causing the problems.

FCC Proposes Additional Fine for Former California Amateur Licensee

NEWINGTON, CT, Dec 3, 2004--Fast on the heels of a $10,000 Forfeiture
Order (FO), the FCC has now proposed to fine Jack Gerritsen, ex-KG6IRO,
of Bell, California, an additional $21,000 for interfering with Amateur
Radio communications.

Do you know if the infamous L.A. 41 meter pirate has ever been
caught? Seems like he has been running 10 KW on 7 mHz and
thumbing his nose at the FCC for years now.

Better the FCC is slow and late than never. Anyone remember the clown
Herb on 14mhz???? Or the bozo that drove the 7240 SWL net off the air.
I'm at a loss as to what motivates guys to be such a royal PITA.

You do know the FCC gave KV4FZ back his ham license within
a year after taking it away, dont you? Check qrz.com
After he jammed the public service nets for 35 years, they took his
license for less than a year and gave it back to him. A real enforcement
example?!

Typically the numbers in an Armature Radio callsign designates the radio
district the station is located. A "6" is exclusively for California, an "8"
is for Michigan, Ohio, and West Virginia. However for some time the FCC has
allowed people to move to another radio district without requiring a new
callsign to be assigned.

Amazing...only one year loss of license. I don't know why the FCC is
so reluctant to take decisive action and so slow to react. Maybe the
staff is gun shy from all the free marketeers that have run the
commission. The FCC has seen its influence whittled back by changes in
the market. People are choosing to communicate over the open and
unregulated internet, by cell phone, etc., rather than stand in line
for licenses at the FCC. The broadcast industry will be rapidly
shifting away from FCC control as more shows are moved to satellite
radio. And it is highly unlikely that congress will use the FCC to
regulate those new methods of moving information and entertainment.

The FCC does not stand a chance pushing this case.
I have it on first hand experience that the FCC is staffed by
manic-depressive psychotics, and this will invalidate their
case.

FCC Proposes Additional Fine for Former California Amateur Licensee

NEWINGTON, CT, Dec 3, 2004--Fast on the heels of a $10,000 Forfeiture
Order (FO), the FCC has now proposed to fine Jack Gerritsen, ex-KG6IRO,
of Bell, California, an additional $21,000 for interfering with Amateur
Radio communications. The target of numerous complaints of insistent
interference to numerous ham radio repeaters, Gerritsen already faces a
$10,000 fine the FCC affirmed in October. The latest proposed fine
stems from further specific alleged instances of interference between
June and September of this year.

"Gerritsen's threats against other operators and his abusive use of
amateur frequencies are the antithesis of good amateur practice and
engineering," the FCC said in a Notice of Apparent Liability (NAL)
released December 2. "Gerritsen announced to authorized amateur users
that he intended to interfere with their transmissions and then
proceeded to cause such interference." Based on the information before
it, the FCC said it finds that Gerritsen willfully and repeatedly
violated ?333 of the Communications Act of 1934 by maliciously
interfering with the communications of authorized Amateur Service
users.

In 2001, the FCC's Wireless Telecommunications Bureau (WTB) swiftly
rescinded its Amateur Radio license grant to Gerritsen after learning
of his earlier state conviction for interfering with police
communications. As a result of the conviction, which he's appealed,
Gerritsen ultimately spent some time in jail. He has continued to
maintain that the FCC can't take away his operating privileges without
a hearing, and that he still has a ham ticket.

Gerritsen's now-pending Amateur Radio application is back in the hands
of the WTB, which also will decide the fate of his General Mobile Radio
Service (GMRS) license. The FCC set aside that grant last fall because
of Gerritsen's alleged continued unlicensed operation and deliberate
interference. A Hearing Designation Order for Gerritsen is said to be

working its way through the FCC.

In its December 2 NAL, the Commission cited three specific instances of interference attributed to Gerritsen and mentioned several others in proposing the huge fine, which includes an "upward adjustment" from the base forfeiture amount of $7000. The NAL notes that in determining a fine, the Commission may consider the nature, circumstances, extent and gravity of the alleged violations as well as the suspected violator's history of prior offenses and degree of culpability. "Despite warnings and a prior NAL and Forfeiture Order, Gerritsen's unauthorized willful and malicious interfering radio operations have been ongoing for several months," said the NAL, signed by FCC Los Angeles Office District Director Catherine Deaton.

In one instance in September, the FCC said, a complaint from an ARRL Official Observer alleged that Gerritsen "deliberately and maliciously interfered with the Young Hams Net" on a 2-meter repeater. "The complaint alleged that the prerecorded messages transmitted by Gerritsen were so intense and vile they were reported to have reduced one of the younger participants to tears," the NAL recounted. On other occasions, an individual identifying himself as Jack Gerritsen and/or using the KG6IRO call sign, has monopolized various LA-area repeaters for long periods, the FCC said, preventing other users from accessing the machines.

Several times, FCC agents have tracked interfering transmissions to Gerritsen's residence. Commission representatives have advised him that he does not have authority to transmit on amateur frequencies and warned him to keep off the ham bands.

Unconfirmed but generally reliable reports say Gerritsen has not been heard on LA-area repeaters for more than two weeks now, and there's some evidence that he may be staying south of the US border--at least for the time being. He has 30 days to pay or appeal the proposed fine.

New CB Radio club forming in Detroit.

Hams Welcome, if they behave themselves.

First meeting held at the Ward Settlment House
at 7 pm, this Friday.

Guest speaker is Rooter822 who will give tips on
how to properly work DX in the upper band
ranges above 27600 khz.

See you there!

> Better the FCC is slow and late than never.

That's usually the case.

> Anyone remember the clown Herb on 14mhz????

Ah yes! The great KV4FZ from St Croix in the USVI.

Glub bless him! (xoxoxo)

Herb was a true JEDI MASTER at the fine artform of
stirring up the shit, getting others to do your dirty work
for you, and attracting every nutcase ham in the USA
to his 'home base' of 14.313 for his daily roundup of
mayhem and insanity. Herb would get the ball rolling
and quietly slip away when the mess was a much like
a self-perpetuating car wreck on the Interstate with
everyone driving 85 in a fog.

If you missed the GOOD OLE DAYS of the infamous
14.313/14.300/3.894.5 radio wars, you really missed
that most comical days ham radio has ever seen since!
It was the archetype "15 minutes of fame" opportunity for
anyone with a microphone. a true "ShowTime At The
Apollo" for ham radio if there ever was until Mr.
Hollingsworth came in and broke up the party, much like
Alan Greenspan does at the FED when he raises Interest
rates.... (...there hasn't been anything like it since - how sad)

> Or the bozo that drove the 7240 SWL net off the air.

There were FOUR Bozos (..that we suspected) to be exact.
One in NJ, one in WPa, One in Ohio and the last one
in W.Va. NJ and Pa got caught red-handed by the FCC.
(the guy from Pa is currently in the Pa State Mental Health
system somewhere in [blank] Pa incidentally, on charges
un-related to his ham activities...)

Ohio and W.Va. are still out there, but are rarely heard
on HF anymore.

All four of em used to go all over many places and
nets on the HF bands like stray feral dogs taking
their respective crap on people's lawns. (that's the

best way to put it....really)

> I'm at a loss as to what motivates guys to be such a royal PITA.

Mostly attention starved sorry individuals with
borderline mental health issues. They are most
often Advanced College Degreed individuals
who never matured socially, white collar at the
office but henpecked or un-marryable at home.
They turn on the ham radio and they become
"Captain RF America" behind their overpriced
Icom electret condenser microphones.......

Get it.....? :)

....AND IN OTHER NEWS:

http://www.guardian.co.uk/arts/news/story/0,11711,1364123,00.html

courtesy of http://www.harrylime.biz

A humble porcelain urinal - reclining on its side, and marked with a false signature - has been named the world's most influential piece of modern art, knocking Picasso and Matisse from their traditional positions of supremacy. Marcel Duchamp's Fountain, created in 1917, has been interpreted in innumerable different ways, including as a reference to the female sexual parts.

However, what is clear is the direct link between Duchamp's "readymade", as the artist called it, and the conceptual art that dominates today - Tracey Emin's Bed being a prime example.

According to art expert Simon Wilson, "the Duchampian notion that art can be made of anything has finally taken off. And not only about formal qualities, but about the 'edginess' of using a urinal and thus challenging bourgeois art."

The Duchamp came out top in a survey of 500 artists, curators, critics and dealers commissioned by the sponsor of the Turner prize, Gordon's. Different categories of respondents chose markedly different works, with artists in particular plumping overwhelmingly for Fountain.

"It feels like there is a new generation out there saying, 'Cut the crap - Duchamp opened up modern art'," said Mr. Wilson.

He said that it was "something of a shock" that Pablo Picasso was not top, particularly since, he argued, the artist's cubist constructions of 1912 to

1914 were Duchamp's "jumping-off point". However, Picasso has not been totally erased: Les Demoiselles d'Avignon and Guernica were second and fourth in the survey.

Try to understand hams. Hams thrive on getting upset over
insignificant things which normal people dont think twice
about. Try it. Next time you are out shopping for groceries
and you go to check out, ask the clerk if she heard about the
CB invasion of ten meters. She will look at you like you are
a weirdo. Exactly, and that is how hams are viewed by the
public.

So are hams weirdoes for wanting to follow/enforce the law or are the freebanders weirdoes for violating the law? This is one of the biggest problems with society today. People who follow the rules are weird. People who violate the rules they don't agree with are "normal."

Kevin, WB5RUE

In the 1960's they took prayer and the Ten Commandments out of our public schools hoping to liberate a generation. They succeeded. Now we have a generation who thinks they have the liberty to lie, cheat, steal, kill....

2734. Ex Hammie Jack Jammer Gerritsen Fined Another $21000 And He Runs Away

Newsgroup: rec.radio.amateur.policy
Date: 2004-12-10 19:15:27 UTC
From: netmanager2@yahoo.com
Message-ID: <1102706127.363111.295450@z14g2000cwz.googlegroups.com>
Source record: 100632
Cross-posted to: rec.radio.amateur.policy, rec.radio.amateur.misc, rec.radio.shortwave, rec.radio.scanner, rec.radio.cb

This is from todays News Line report.

ENFORCEMENT: ANOTHER $21,000 FINE PROPOSED FOR EX-KG6IRO

>From the "we told you so department" comes word that the FCC has proposed an additional twenty-one-thousand dollar fine against Jack Gerritsen, the former KG6IRO. This on the heels of a ten thousand dollar fine that the agency affirmed against the former California ham in October. Amateur Radio Newsline's Bruce Tennant, K6PZW, has been following the Gerritsen saga and has the rest of the story:

--

The FCC wants to hand Jack Gerritsen, the ex KG6IRO a proposed fine in the amount of $21,000. But it has to find him first. And for the past three weeks or so, Jack Gerritsen is no place to be found. At least the unlicensed male operator using the null and void call sign KG6IRO has not been heard on any of the Los Angeles area repeaters for that amount of time.

Word of the latest Notice of Apparent Liability to Monetary Forfeiture to Gerritsen has spread like wildfire across the Internet and packet radio networks after the ARRL posted a news item on it to its website. In a nutshell, it said that the FCC was hitting Gerritsen with the $21,000 N-A-L because of interference he caused to hams operating numerous Southern California repeaters. This, in a time frame from June through September of this year.

This latest notice comes on the heels of a $10,000 fine for earlier violations. One affirmed by the FCC only a few weeks ago and not associated with other allegations of jamming Coast Guard Emergency Communications that we reported three weeks ago. That matter is reportedly still under investigation by military authorities.

Gerritsen, or at least the voice on the air claiming to be Jack Gerritsen has never denied making the transmissions. Quite the opposite. On numerous occasions he has come up in the middle of an ongoing Q-S-O and announced that his intentions to take over the channel. He has then proceeded to cause interference, usually by playing a tape of his anti government political rhetoric and his opposition to the U.S. military action in the Middle East.

--

Sample of Gerritsen anti-war audio recorded off-air: "...those high explosives are now in the hands of patriots defending their country from our invasion killing hundreds of the coalition forces and more than a thousand Americans who are still looking for weapons of mass destruction. Do we need four more years of this? Kilowatt Ge 6 (undescernable....) Oscar.)

--

One way that hams in the area have handled these attacks on their repeater systems has been to simply shut them down. Others, with multiple sites tend to turn off receivers that the Gerritsen voice can access to while keeping communications going through other receive sites he cannot reach. Some of these countermeasures have at times seemingly angered the voice claiming to be Gerritsen.

--

Sample of voice claiming to be "KG6IRO voice" admonishing repeater owners: "Your attention please. To all repeater owners and operators. For those of you who demand or request that I not (undescernable) their repeater with my radio signal, I have the same demand and request that you stay out of the receiver of my radio equipment. Kilo Golf 6 India Romeo Oscar."

--

On several occasions he has threatened legal action against those taking him off the air based on his First Amendment Constitutional guarantee to freedom of expression. So far those threats have proven groundless. Now, the real Jack Gerritsen is no place to be found. There are a number of rumors that he has left the United States for Central or South America, but at airtime none have been substantiated.

All that's definite is that former radio amateur Jack Gerritsen owes the government at least $10,000 and has the new proposed $21,000 fine waiting in the wings. And there's still that Coast Guard issue that could bring with it a much harsher penalty. We will all have to wait and see.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

Back in 2001, the FCC's Wireless Telecommunications Bureau rescinded its Amateur Radio license grant to Gerritsen. This, after learning of his earlier state conviction for interfering with Los Angeles area police radio communications. (ARNewsline(tm) from numerous sources includinh K6PZW, ARRL, and numerous others)

Actually, Troll Jerry, those pirate operators (CB operators are OK; what makes them CB'ers is that they are IN the allocated frequencies for "Citizens' Band.") are just illegal operators, which most check-out clerks don't care about any more than poachers. However, those affected by such willfully illegally operating jerks do care about it. (Sometime you should read about what happens to poachers when they get caught hunting on Indian reservations.) But with the sun-spot cycle on the low side, a few pirates in the CW band are a good way to spot when the band is open; think of them as beacons. Also, many hams use the illegal operators' frequencies as good spots to call CQ. Other hams just listening on ten meters usually take note of the illegal operation, hear the cw, switch on their receiver's narrow filter to knock out the voice signal, and reply to the other ham. So, the pirates serve not only as band opening beacons, but also mark good calling frequencies for legal operators. You are right about one thing, Jerry: pirates are nothing to get all bent out of shape about. Off course, when the pirates are caught, their vehicles (and any legal cargo) should be confiscated and sold to the highest bidder. That might help the pirates and their employers figure out a good reason to conform to the law. Nothing hysterical about that; just saying that those who break the law should get a positive incentive not to do it. Now Jerry, please don't blacken the name of good CB operators by calling pirates (also known as "bootleggers" in earlier days) by the name of perfectly legal and decent Citizen Band operators.

Steve, you seriously need help.

I post a message recommending a piece of morse training software and you morph it into an occasion to critique my home page and make personal attacks.

Please seek help, if only for your family's sake.

With warmest regards of the season,

de Hans, K0HB

If there are any old sewer-pipe Radiomen (capitol "R") among you (if you have to ask, then you ain't one), here's something I had to share with you. Tribute to an old shipmate by Bob 'Dex' Armstrong

- -

Vic Casciola, Radioman, Shipmate.

Late one evening, before our last reunion, I got a phone call. When I heard the voice, years melted away.

"Dex... Vic Casciola... You remember me?"

Did I remember Vic? Does a hobby horse have a hickory dick? You bet I remember Vic!!

Vic had a medical condition that erased a lot of his memory and was phoning to see if I thought the lads would recall who he was. He didn't want to show up at the reunion if nobody would remember him. He also wanted his son to know that long ago, his dad rode the boats.

So, this is for his son. It's not much... Others could do better. I'm not articulate enough to capture on paper the unique, one-of-a-kind shipmate that was Vic. All I want to do is validate Vic's credentials.

Vic arrived on Requin wearing paratrooper wings over his ribbons. Paratrooper wings and Silver Dolphins... Talk about double-dipping lunatics.

Vic was a radioman... Make that triple-dipping lunacy. He was the absolute master of the "speed key." A contraption radio guys used to tap out flips and blips that to fellow practitioners of flip and blip transmission, could be translated into communication understood by normal members of the human race. Vic could pound out stuff at a rate that constantly frustrated his recipients. Many nights, radiomen receiving Vic's "heat" would have to tell him to hold up until they could hunt up some poor devil who could read at his rate... Like going to find a catcher for Nolan Ryan's fast ball. Vic could bang out code faster than Gypsy Rose could pop a garter snap.

He was amazing. He was also a master at sneaking stuff into official traffic. In the old days, boat sailors didn't get fifty word 'poopy-grams'... We got 'Little Orphan Annie drops' and anything you could con a radioman to sneak into a message after he caught up on ALLNAV transmissions.

A 'Little Orphan Annie drop' came from naval aviators. The good ones, God bless 'em, would go to the tender, collect your mail, put it into a cleaned up paint can along with a couple of recent newspapers, a dog-eared Playboy, and two or three sports magazines. They would tape the contraption up and drop it to you

when you were surfaced.

They would fly over and yell stuff over the radio,

"Mark center... Mark ringer..."

And out of the bottom of a P2V would come a tumbling can. Lookouts would cheer and the can would slam into the swells.

If you were lucky, someone on deck would fish out the can with a boathook, mail would be distributed in the control room and we would spike the morale-meter.

If you were unlucky, the sunovabitch would sink... And set up housekeeping with crabs and a lot of German U-Boat crews. One Christmas, we lost a can on a three contraption drop. I later learned that a port wine soaked, pecan loaded fruitcake my aunt sent me, had been misdirected to the deck force of the Titanic.

That brings us back to method two of clandestine shore communication... Vic Casciola and his magical speed key. The poor bastards in the Orion radio shack would get stuff like this...

"REQUIN ETA 1600Z... REQUIRE WELDER FOR DECK DAMAGE ON STAND BY... PHONE 319-6247 FOR RESULTS OF LITTLE LEAGUE SERIES... REQUIN TO DEPART NORFOLK 0800Z 031561... WILL REQUIRE STORES, TWO WEEKS... FUEL... CHARTS ACCORDING TO OP ORDERS... PHONE 319-4670 TELL MARY DAD WILL FUND PROM DRESS... WILL LOAD 2 MK37 TORPEDOES... HAVE INJURED MAN TO TRANSFER NORFOLK NAVAL HOSPITAL REQUIRE TRANSPORT... PATIENT AMBULATORY... PHONE 319-4026 OBTAIN RESULTS PREGNANCY TEST... WILL NEED NEST ASSIGNMENT AND LINE HANDLERS... (pause)... WILL EXPECT ANSWERS NEXT TRANSMISSION"

Magic Man could get everything from clothing measurements to racing results and the wardroom never knew.

Vic could fall asleep in the middle of a bar brawl. We didn't know that it was probably an early indication of his later medical problem.

Once, the diving officer was told that Vic was asleep on watch in the radio shack. Major no-no. When the diving officer went to the shack, there was Cassiola wearing headphones with his eyes closed.

"Casciola... You asleep?"

"No sir."

Never opened his eyes.

"Well, what in the hell are you doing with your eyes closed?"

"Checking my eyelids for holes."

The worst duty on Requin was having the below deck watch and having to wake Vic up. The sonuvabitch could sleep through the last five minutes of a hocky game, a five hundred pound bomb drop and the second coming of Christ. The COB once said if Vic had been at Pearl Harbor on December 7, 1941, he would have slept through

it. I would rather have taken raw meat from a half-starved Bengal tiger than have been sent to separate Vic from his rack. It ranked up there with the most delicate surgical procedures... You had to remove the flashcover from Vic's back without getting your lights punched out. We toyed with the idea of doing it electrically, but how could you wire up a guy who could have the tender phone your mom to wish her a happy birthday?

Vic Casciola... Did we remember you?

Hell no.

Everyone wore Dolphins, paratrooper wings, sent code at the speed of light and slept like a bank vault.

This is from todays News Line report. If the quotes are true then this Gerritsen sounds like hes a traitor. What kind of a nutcase praises al Kida for killing Americans?

>ENFORCEMENT: ANOTHER $21,000 FINE PROPOSED FOR EX-KG6IRO

>From the "we told you so department" comes word that the FCC has proposed an additional twenty-one-thousand dollar fine against Jack Gerritsen, the former KG6IRO. This on the heels of a ten thousand dollar fine that the agency affirmed against the former California ham in October. Amateur Radio Newsline's Bruce Tennant, K6PZW, has been following the Gerritsen saga and has the rest of the story:

--

The FCC wants to hand Jack Gerritsen, the ex KG6IRO a proposed fine in the amount of $21,000. But it has to find him first. And for the past three weeks or so, Jack Gerritsen is no place to be found. At least the unlicensed male operator using the null and void call sign KG6IRO has not been heard on any of the Los Angeles area repeaters for that amount of time.

Word of the latest Notice of Apparent Liability to Monetary Forfeiture to Gerritsen has spread like wildfire across the Internet and packet radio networks after the ARRL posted a news item on it to its website. In a nutshell, it said that the FCC was hitting Gerritsen with the $21,000 N-A-L because of interference he caused to hams operating numerous Southern California repeaters. This, in a time frame from June through September of this year.

This latest notice comes on the heels of a $10,000 fine for earlier violations. One affirmed by the FCC only a few weeks ago and not associated with other allegations of jamming Coast Guard Emergency Communications that we reported three weeks ago. That matter is reportedly still under investigation by military authorities.

Gerritsen, or at least the voice on the air claiming to be Jack Gerritsen has never denied making the transmissions. Quite the opposite. On numerous occasions he has come up in the middle of an ongoing Q-S-O and announced that his intentions to take over the channel. He has then proceeded to cause interference, usually by playing a tape of his anti government political rhetoric and his opposition to the U.S. military action in the Middle East.

--

Sample of Gerritsen anti-war audio recorded off-air: "...those high explosives are now in the hands of patriots defending their country from our invasion killing hundreds of the coalition forces and more than a thousand Americans who are still looking for weapons of mass destruction. Do we need four more years of this? Kilowatt Ge 6 (undescernable....) Oscar.)

--

One way that hams in the area have handled these attacks on their repeater systems has been to simply shut them down. Others, with multiple sites tend to turn off receivers that the Gerritsen voice can access to while keeping communications going through other receive sites he cannot reach. Some of these countermeasures have at times seemingly angered the voice claiming to be Gerritsen.

--

Sample of voice claiming to be "KG6IRO voice" admonishing repeater owners: "Your attention please. To all repeater owners and operators. For those of you who demand or request that I not (undescernable) their repeater with my radio signal, I have the same demand and request that you stay out of the receiver of my radio equipment. Kilo Golf 6 India Romeo Oscar."

--

On several occasions he has threatened legal action against those taking him off the air based on his First Amendment Constitutional guarantee to freedom of expression. So far those threats have proven groundless. Now, the real Jack Gerritsen is no place to be found. There are a number of rumors that he has left the United States for Central or South America, but at airtime none have been substantiated.

All that's definite is that former radio amateur Jack Gerritsen owes the government at least $10,000 and has the new proposed $21,000 fine waiting in the wings. And there's still that Coast Guard issue that could bring with it a much harsher penalty. We will all have to wait and see.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

Back in 2001, the FCC's Wireless Telecommunications Bureau rescinded its Amateur Radio license grant to Gerritsen. This, after learning of his earlier state conviction for interfering with Los Angeles area police radio communications. (ARNewsline(tm) from numerous sources includinh K6PZW, ARRL, and numerous others)<

ed,
it isn't hard at all. in fact, I can also be an ass if I really try hard.
most of the time though, its a simple matter of:
1. forgeries
2. someones buttons getting pushed a little too frequently
3. other personal "considerations"
4. just venting.

all in all though, it seems to me that some folks just have a harder time
trying to get along than others.

my $0.02 worth.

Hello, Hans

Some folks I'm reading in the thread might have preferred the method in RMA school. You *will* copy 16 words per minute before you graduate. You *will* graduate in (was it 8 weeks? I forget). Or else. Vietnam was hot. No one wanted the "fail and sail" option. People *did* learn Morse code in record time :))

BTW, they had recently reduced the code speed when I was in RMA school in 1967. I believe it had been 18 words per minute and they had reduced it to 16. Oh yes, you had to memorize the BAUDOT code also.

After leaving the service, I was working at Kodak and took a part time job at WADD in Brockport, NY, a small am radio station. I was in a rush and ripped copy from the teletype. The guy breaking me in was watching over my shoulder as I started the news. LOL ... right in the middle of one article the teletype took a hit and shifted out of letters and into gibberish. I read right through it. After we went back to the records he asked "how in hell did you do that?". I told him 4 years in the Navy running teletypes tend to do that to you. I was used to it. ;)

Best regards from Rochester, NY
Jim AA2QA

Never had the pleasure of RMA school. Although I was a ham, out of boot camp they sent me to RDA school at GLakes. Reported aboard my first tin-can as an RDSN on a Saturday. On Monday AM the PN's checked me in and introducted me to the Ops Boss who saw I was a ham. Turned out they had a surplus of scope dopes, but needed some RM's in the worst way, so he "temporarily" assigned me to OC instead of OI division. Thus ended my short career as an RD and started my career as an RM. Years later BuPers still had canniptions about my gundecked rate change.

Worse than that were the model-28s whose stunt box inadvertently had the "unshift-on-space" toggled on. Then get a 4-section logreq which is 85% numerals and have to mentally bit-shift that summabitch back to figs so the SK's could read it!

73, de Hans, K0HB

No, you need to accept the blame for that. At one point you thought it was
funny to use someone else's call, and even made it a point to perpetuate it.
Don't now attempt to make yourself appear less than culpable.

Oh how the tales of "I was a one-of-a-kind" super hero grow more
exotic and more exaggerated as the years pass and the number of
brown bottles consumed down at the Legion Hall grows. Do join Hans
down at the Legion Hall. Friday nite Happy Hour awards are given for
who can spin most incredible sea story.
ROTFLMAO! You old farts need to get a life!

Oh thats funny a few months back you said you sold everything I guess your
just a part timer now?

WA3MOJ

I especially like Randy, how the amateur operator WA3MOJ posts amps for sale
himself..... LMAO!!!!

GMRS uses FRS simplex (direct) frequencies. The only advantage to having a GMRS setup would be the use of repeaters.

As I read Hans' and Jim's and others' stories of their USN, USCG and Merchant Marine experiences, one thing that is clear to me is that they do *not* claim to be "one-of-a-kind" at all. Rather, they are simply relating their experiences as part of a community. That's why the statue of a single sailor in Washington DC can express so much.

GMRS is allowed up to 5 watts of transmit power,

FRS is only allowed to transmit with up to 500 milliwatts A.K.A. 1/2 watt.

MURS is probably the best choice for short-range local communications, by
Non-Hams.

No license is needed. These radios transmit with up to 2 watts, 4 times the
power of FRS radios!

(MURS) Multi-Use Radio Service Frequencies

95.632 MURS transmitter frequencies. (a) The MURS transmitter channel
frequencies are #1 - 151.820 #2 - 151.880 #3 -
151.940 #4 - 154.570 #5 - 154.600 • These frequencies
were called "dot" frequencies and had required a license to transmit. On
November 12, 2000 the FCC dropped the license requirement and opened them up
just like the FRS frequencies and CB radio. Max power on MURS is limited to
TWO watts. You will be able to talk MUCH farther with MURS radios than with
FRS radios.FRS & GMRS FREQUENCIES
NOTE: Not all FRS Manufacturer's channels correspond with one another. FRS
and GMRS Licenses may contact each other if they wish. They may share some
channels. The "private" squelch channels may not correspond either. Test
your equipment at a distance of at least 100' for compatibility. FRS

GMRS and FRS are both citizens band allocations. GMRS is a licensed radio service, authorizing higher power and flexibility. FRS is unlicensed, with significant restrictions. FRS frequencies are interleaved with GMRS frequencies. GMRS radios are also authorized to transmit on FRS channels 1 to 7 with no more than 5 watts and using 5 KHz deviation. GMRS uses 467 MHz frequencies as repeater input channels. All FRS channels are simplex, with 3 Khz deviation and 500 milliwatts. Channel MHz Channel MHz GMRS

>Must be that "real military experience" talking.

Heh heh heh. Interesting series of posts under two threads.

The first set, almost all from anonymous posters, decry any and all nostalgia largely because they had NO such experience in their life...but, they want to hurt those who HAVE had such experiences in some way. :-)

The next set comes from the PCTA extras who also NEVER served in any military who are bitching about the nostalgia in regards to military experience. They "Must" make their feelings known although they don't realize that others will read a much different take on their postings. :-)

One of the more convoluted postings comes from another PCTA extra who NEVER served (he says "he serves in 'other' ways but never explains those 'other' ways). He glories in the past and the emotion of symbolism...PROVIDED such symbolism features morsemanship and plays up the morse myths of olde tyme radio. Strangely, this never-serving PCTA extra wants to chide those of us who have served on our behavior towards others. :-)

The next set of postings will all be about the Glory of Morse and The Sea (it has already started, in fact). Those "sewer pipe" folk (whatever that means) haven't really accepted any other radio users/operators who served on land or in the air WITHOUT needing all those mighty macho morsemanship skills. We "landlubbers" (term used as a sort-of pejorative by swaggering sea-goers) are supposedly nobodies due to the lack of morsebeeping in our military records. We should not associate with their high holinesses of the on-off keying ham hocked morse legions.

The Morse Myths are alive and well in the Archaic Radiotelegraphy Society (aka the ARS)! The Beeper Brotherhood continues...

What's the matter, Len? Are you feeling left out of the conversation?

Contrary to your pedandic whining, I have nothing but positive regard for anyone who served in any Armed Force, regardless of the color of their uniform, their NEC (MOS to you), and whether or not they know what a sewer-pipe Radioman is (I could tell you, but then I'd have to kill you).

I am one of those who once wore a uniform, and yes it did take some ball to wear it... The guy who owned it got pretty mad!

Hello, Jim

Heck, anyone who has used one of those old green machines knows how they were. Folks should be very grateful for the modern pc. The electronics are far more rugged than the old teletypes. I've often stared at the 100 word per minute mechanical beasties clanking away and wondered how they could do that without flying apart. Of course, they did break down now and then ... ;)

Best regards from Rochester, NY

Tsk, I'm not the one who is "sensitive" here, sweetums. :-)

The "sensitive" types are all those other twits who either won't use
their real names or who never served (but think that 'radio' begins
and ends on the sea with the sound of beeping...because they
READ about it in the ham magazines).

As to "telling me requires killing me," I doubt you could do it. :-)

Us who served on LAND got some real training in the killing arts
in addition to learning our military occupation specialties. We
didn't sit around in cozy little steel rooms (with waste pipes
going through them) listening to "sailor-swing morse" over radios
while enjoying a mug of what the USN called "coffee" (the folks
on land used that material for macadam roadways).

Pardon me while the LAND forces have to follow the emperor's, er,
I mean President's decision to "civilize" the land of Iraq by means of
up-close and personal warfare. Hear any good morse from the
LAND forces lately, Chief? Or from Walter Reed Army Hospital
amputee wards?

Forgive my intrusion. I believe that Rev. Jim is making ready to
give another Sermon on the Antenna Mount to "lecture" me for not

being "courteous and civil" to other amateur morsemen. :-)

Temper Fry and Most Best Holiday Regards,

Oh, but I *do* have a life. I never joined any of the groups such as you mention. I'm too busy moderating several groups (electronics, computers, medical) and repairing computers. I always get a chuckle out of the folks who think I'm over the hill. My neighbor is a good example. I cleaned her computer up once, partitioned the hard drive, set the programs back up, added a firewall and anti-virus. A while later, she had another problem and took it to a "tech".

She called me a couple of months later. She's on cable (roadrunner). Broadband. Seems the tech took out the partition and did *not* re-install the firewall nor antivirus. Not particularly smart. That mess took me a couple of trips over and required application of three different programs (plus a manual edit of the registry).

She told me over a month that she had "improved" her pc. Guess what? A swiped copy of WinXP. LOL. I told her what to expect. I didn't mention that I was going to be too busy to help her this time, but I think she got the message. I haven't heard from her and I'm certain that XP has locked up by now.

ROTFLMAO!!

Meanwhile, I've responded to a couple of posts and now going to check the other groups, clean the hard drive, defrag, and call it a day (for a couple of hours).

Best regards from Rochester, NY

"Green?" All the ones I've ever worked with were black (old Model
15 to 19) or different shades of Teletype Corporation gray (Model
28 or 33)... :-)

Teletype Corporation ought to get a standing ovation for some
excellent mechanical design in those old teleprinters. They were
robust performers that went on for days at a time needing only to
be fed paper and (once in a while) a new ribbon.

The old 60 WPM units were tried out at 75 WPM on a few Army
circuits in 1955. MTBF went to hell at that speed and those circuits
had very high maintenance turn-over. Restored to 60 WPM speeds,
they continued on as if nothing had happened. Used the old type
cage structure of the manual/electric typewriters.

The "stunt box" (literally a box of type) used on the newer 100
WPM models did awesome things, true, fun to watch while
waiting for a program's answer back. Never had one "lock up" in
some strange mode, though, that including the old all-caps 60
WPM machines with Caps/Figs keys.

By 1980 the matrix printer was IN for anyone needing text
throughput, honking out 300 WPM with just a polite buzz instead
of the clatter-bang of the mechanical teleprinters. My little Epson
MX-80 (purchased in 1980) is still operational but it can't be given
away in this age of inkjet printers that tosses out an entire page
of text in 5 seconds (draft mode, black and white). The only sound
from the "old" HP 722 inkjet printer is the paper-advance stepping
motor; inkjets themselves being inaudible.

But, the Archaic Radiotelegraphy Society (ARS) isn't really
interested in communications per se, is it? ARS is all about
HOW the communications is done, not the comms' content. :-)

They made one heck of a clatter at 60 wpm! And even in our limited use, in the
comfy conditions of Room 214, they required some care.

Still, a PC won't give you that smell of hot oil nor the satisfying din at the
end of the hall. While I never learned the entire Baudot code, I was able to
recognize "RY" and "CQ" in FSK.

73 es keep the stories coming

Ach, ja, der Gruppenfuhrer uf das Raddio Kops demands "to see
papers!" :-)

Don't let your "diplomatic training" interfere with your attempted
overthrow of the First Amendment that prohibits us U.S. citizens
from discussing FEDERAL LAW AND REGULATION.

You are still stuck on the fantasy that you have this little
fraternal order where You and Your Kind are the "only" ones
who can "make rules." Therefore, in your fantasyland vision,
all who are not licensed cannot discuss a damn thing about
amateur radio. Tsk. Secretary Powell might have frowned on
your fantasy world dicta. Maybe Condie Rice will buy it? :-)

Oh, and on the thread, I didn't need any amateur radio license
to get into the Signal Corps, then get assigned to a station
with three dozen high-power HF transmitters, then operate them
and maintain them. Operation and maintenance was NOT for
amateurs. That was only the beginning for me...something that
happened while you were way too young to be responsible for
much of anything.

I suppose you are going to go into the "ham neophyte" act again,
reprising that old, trite, very tired "I will be a 'beginner' in radio if
I ever get a ham license!" Gee-suss, herr Gruppenfuhrer, what's
to know that can't be picked up in a day...and what happens if
'proceedure' isn't followed _exactly_? Will I be "fired" for not using
"correct" language, format, protocol or all that other bullshit? :-)

Ooooooooo...I can see the fires of a potential Flame War growing on your side of the screen! Outrage at some "outsider" sassing der great Gruppenfuhrer! How dare they! :-)

Focus. Try to stay within a light year of the general thread. Drop the assinine "olde-tymer brotherhood of morsemen" schtick and outrage at "nobody talks to us hams like that!" It got tired long ago.

A Most Pleasant Seasoned Greeting...guten abend.

It is "Federal law and regulation".

> You are still stuck on the fantasy that you have this little
> fraternal order where You and Your Kind are the "only" ones
> who can "make rules." Therefore, in your fantasyland vision,
> all who are not licensed cannot discuss a damn thing about

Naw, Len. Me and my kind are licensed amateur radio operators. You
aren't. You can discuss and have discussed. You get quite a number of
things about amateur radio incorrect. I didn't work for Secretary
Powell and he had nothing to do with my amateur radio operation. How
did you foul that up?

> Oh, and on the thread, I didn't need any amateur radio license
> to get into the Signal Corps, then get assigned to a station
> with three dozen high-power HF transmitters, then operate them

> and maintain them.

Good for you, Len. You didn't need an "Awesome Trainer" or an amateur
license to get into the Signal Corps. Is your objective in posting here
to get back into the Signal Corps?

> Operation and maintenance was NOT for
> amateurs.

Sure it was, Len. I'm sure that when you first began doing such work,
you were strictly a rank beginner.

> That was only the beginning for me...something that
> happened while you were way too young to be responsible for
> much of anything.

That's fine, old timer. I'll be happy to carry on for some time after
you are able to be responsible for much of anything. Things like that
even out. There are, of course, things which don't even out. If you
become a beginner in amateur radio, there is no realistic way for you to
enjoy four decades or more in the game. Quite a number of guys get into
ham radio late in life. Many of them are exhuberant and quick learners.
They make hay while the sun shines. Your pile of hay is quite small and
it is beginning to mildew.

> I suppose you are going to go into the "ham neophyte" act again,
> reprising that old, trite, very tired "I will be a 'beginner' in radio if

> 'proceedure' isn't followed _exactly_? Will I be "fired" for not using
> "correct" language, format, protocol or all that other bullshit? :-)

That's right, Len, but don't get too far ahead of yourself. When and if
you ever obtain an amateur radio license, you'll be a rank beginner in
amateur radio. You have not yet attained that status. There's plenty
to know which can't be picked up in a day.

If you don't adhere to regs, procedure, protocol, etc., you'll be at
best marked as a green op. Carry on with that and you'll be known as a
lid.
Carry it to the extreme of breaking FCC regs and the Commission can
"fire" you.

> Ooooooooo...I can see the fires of a potential Flame War growing
> on your side of the screen! Outrage at some "outsider" sassing
> der great Gruppenfuhrer! How dare they! :-)

Outrage? I'm not even close to outrage, especially when you remind me
that you're an outsider to amateur radio. Just pace the sidelines as
you've done from the beginnings of your r.r.a.p. history.

> Focus. Try to stay within a light year of the general thread. Drop
> the assinine "olde-tymer brotherhood of morsemen" schtick and
> outrage at "nobody talks to us hams like that!" It got tired long ago.

Let's see. You wanted to know which part of the military in which Jim served. I suppose that makes you Gruppen-somthing of the Military Police--you know, the guys in charge of checking everyone's military identification in an amateur radio newsgroup. The question I posed to you would be much more apropos in this venue. I take it that you took offense. Well, that's nice.

> A Most Pleasant Seasoned Greeting...guten abend.

That's awfully nice of you, Leonard. My mom is visiting out your way. Perhaps I'll arrange it so that she, my sister, my niece and my nephews can drop by and sing some carols for you. That might bring some cheer into your existence.

>Naw, Len. Me and my kind are licensed amateur radio operators.

Isn't that sweet? Do you want a nice gold star on your
certificate (suitable for framing)?

>You aren't.

Absolutely true. First thing you've gotten right so far...

>You can discuss and have discussed.

And everyone can be sure that herr Heil will be in there with the
"you ain't got no ham license!" :-)

Heil is utterly predictable. Can't address any subject thread and
always tries for the misdirect.

>You get quite a number of things about amateur radio incorrect.

I'm sure you'd like that to be true, but YOU are incorrect.

>I didn't work for Secretary
>Powell and he had nothing to do with my amateur radio operation.

I didn't think so. Powell has diplomacy. You don't.

>How did you foul that up?

Foul what up? I didn't "foul anything up," sweetums. You keep
manufacturing incidents that don't, didn't exist. :-)

>Good for you, Len. You didn't need an "Awesome Trainer" or an amateur
>license to get into the Signal Corps.

Never said I needed some "Awesome trainer."

Again, you are manufacturing an incident that didn't happen.

You do that consistently.

>Is your objective in posting here to get back into the Signal Corps?

No. What is YOUR "objective?" :-)

Tsk. All you seem to do is pick on certain communicators that
you don't like and then make like you "run" the show. :-)

>Sure it was, Len. I'm sure that when you first began doing such work,
>you were strictly a rank beginner.

Yes, I had rank. No, I was not a "beginner."

Tsk. You got it WRONG again!

You manufactured the wrong incident.

>That's fine, old timer. I'll be happy to carry on for some time after
>you are able to be responsible for much of anything.

I'm sure you would like that...it is shared with the trashman, you
know, the Avenging Angle of the newsgroup. :-)

>Things like that
>even out. There are, of course, things which don't even out. If you
>become a beginner in amateur radio, there is no realistic way for you to
>enjoy four decades or more in the game.

Tsk. Why is it SO necessary to do as YOU did?

Is your ego really that large that you evaluate everyone based on
your "accomplishments?" Must be.

>Quite a number of guys get into
>ham radio late in life. Many of them are exhuberant and quick learners.
>They make hay while the sun shines. Your pile of hay is quite small and
>it is beginning to mildew.

Tsk, tsk. More manufacturing of things. You have a very busy
insult factory going. Not a good thing for the image of U.S.
amateur radio, is it?

>That's right, Len, but don't get too far ahead of yourself. When and if
>you ever obtain an amateur radio license, you'll be a rank beginner in
>amateur radio.

Tsk, tsk, tsk. Still trying to misdirect away from the thread,
aren't you? :-)

"Morse Runner" is a code contest simulator, is it not? The thread
also associated that with various others' military experience.

Now you want to return to your (predictable) diatribe of "nyah,
nyah, you will be a 'rank beginner' in amateur radio," yadada,
yadada, yadada.

>You have not yet attained that status.

What "status?" :-)

Why is it so NECESSARY to have that federal license in order
to discuss the test elements for ENTERING amateur radio?

>There's plenty to know which can't be picked up in a day.

Oh my! Are years and years of "hard work and study" needed,
oh mighty god of radio?

NO ONE can be as good or experienced as yourself...you've
implied that about you for years and years in here. :-)

>If you don't adhere to regs, procedure, protocol, etc., you'll be at
>best marked as a green op. Carry on with that and you'll be known as a
>lid.

Oh, my, YES, by all means use the Proper Proceedure. Say "hi hi"
in voice instead of laughing...report all signal strengths as "599"...
and so forth.

Who said anything about "not adhering to regulations?!?"

Have you prepared some kind of court order for arrest based on
your suppostiion of the future?

>Carry it to the extreme of breaking FCC regs and the Commission can
>"fire" you.

Oh, my, der gruppenfuhrer suddenly morphs into Riley Hollingsworth!

So...if I laugh out loud on voice on the ham bands, I'm breaking
some kind of regulation? :-)

>Outrage? I'm not even close to outrage, especially when you remind me
>that you're an outsider to amateur radio.

With your behavior, it's a wonder that anyone accessing this
newsgroup wants to get into U.S. amateur radio.

>Just pace the sidelines as
>you've done from the beginnings of your r.r.a.p. history.

Tsk. You should have put that as "all my life" instead of just some
kind of "history in r.r.a.p." :-)

You're slowing down, old fella. Age is beginning to set into your
little neurons.

No, wait. It must be RELIGIOUS THING with you. All without
ham licenses are some kind of "infidels?" Yes, that must be it.
You've gone on and on about that AMATEUR license as some
kind of "holy grail" or a "Mecca" to visit or similar.

You don't accept a whole career in radio-electronics as good for
anything, do you? Nope. You dismiss it. Spoils the hell out
your rant, doesn't it? :-)

>Let's see. You wanted to know which part of the military in which Jim
>served.

Jim who? Tsk. You are trying to be Hall Monitor again?

>The question I posed to
>you would be much more apropos in this venue.

No, NOT "apropo." The subject thread started out talking about
a new freeware called "Morse Runner," a CW contest simulator.

I'm sure it is a nice computer program and well written.

However, I'd never be involved in the so-called "radiosport" of
making as many "contacts" as possible in a given amount of
time. That's not communicating anything. That's just some
kind of game. I can get all sorts of computer games to play
with and so can everyone else.

Do I need an amateur radio license to run a GAME on a computer?
Absolutely NOT. Hundreds of thousands of unlicensed others do
that every day, most not even using any sort of "wireless" hookup.

Do I need an amateur radio license to run a transmitter NOT on
the ham bands? No, that requires, for some radio services (but
not all), a COMMERCIAL license. Tsk, I've had one of those
since early 1956. :-)

No, you keep coming back to what YOU think is "apropo," that
of constantly bothering about MY not having an amateur radio
license. That BOTHERS you since that's about all you can do,
bring that up in any thread NOT about that subject.

>That's awfully nice of you, Leonard. My mom is visiting out your way.
>Perhaps I'll arrange it so that she, my sister, my niece and my nephews
>can drop by and sing some carols for you. That might bring some cheer
>into your existence.

"Cheer?" Try some industrial floor cleaner instead of laundry soap.
They can scrub the oil spots out of the garage floor. Minimum wage
even if their Green Cards are up to date.

Meanwhile, you keep on your wonderful, warm-spirited recruiting
campaign to entice newcomers to U.S. amateur radio by saying
they will all be "rank beginners!" The way you are going here there
won't be any worry about using up all the sequentially-assigned
call signs for years. :-)

Don't burn your menorah candles at both ends.

There's actually been alot of 10.5 Meter "HF'er" packet
radio activity on and around this freq for many years.
Seemed to start about a year or two after AEA came
out with the PK-232. Mostly keyboard-to-keyboard
chat back then. As for 6.680 not hearing anything
but a VOLMET aero metrrology station on 6.679 USB
at night. (UK aero Wx station)

I know of a guy who has been operating on 20 meters for
years without his own ham llicense. He just picks out somebody's
call sign and assumes their first name on the air. I've heard him say
it is more fun than freebanding.

It's my understanding that back in 1957-58, the standard for Radioman "A"
school was 24 wpm. 5 letter coded groups on a Navy mill. Test lasted one hour
with no more than 3 errors permitted.

Now *that's* proficiency!

Nawww, I heard down at the Legion Hall that the final exam for
Radioman "A" was they had to come in hung over, drink 12 cups of
black coffee, & smoke three cigarettes, all while copying one 65 wpm
net and simultaneously another 75 wpm net. Oh, they had to use
15 Navy mills to do this. At least that is the last story I heard down at
the Legion Hall.

Sure.

YOU "demand" to see OUR "qualifications" in the form of licenses,
experiences and certifications that have nothing to do with Amateur Radio, yet
you bombard us with trivial, unrelated crap from Anderson-past as if if means
something.

IE: RA16408336. Who cares? Like many of us here, you did a tour in the
Armed Forces. You served as a radio mechanic and nothing else. It has nothing
to do with Amatuer Radio, then or now.

> Don't let your "diplomatic training" interfere with your attempted
> overthrow of the First Amendment that prohibits us U.S. citizens

> your fantasy world dicta. Maybe Condie Rice will buy it?

You are not a licensed Amateur Radio operator.

You have no experience in Amateur Radio.

> Oh, and on the thread, I didn't need any amateur radio license

In order to BE a "ham neophyte" you'd need to BE an Amateur licensee.

You are not.

> Ooooooooo...I can see the fires of a potential Flame War growing
> on your side of the screen! Outrage at some "outsider" sassing

Hello, Len

To some amateurs the how *is* important. Witness PSK, moonbounce, and other stuff. Anyone can grab a microphone and talk. Somehow, a lot of folks get caught up in the code vs no-code argument that is getting *really* old. Seems there used to be an am vs ssb argument back in the 60s as well.

However, that *how* it is done is important if we wish to further ourselves.

Have a merry Christmas, Len, and try to come up with a new argument next year, hear? :)

Best regards from Rochester, NY
Jim AA2QA

Hello, Jim

Clatter? You can't imagine. Locked in a room perhaps the size of a jail cell with 10 to 15 teletypes going. Ship - shore, broadcast .... aboard a ship - which means metal bulkheads, metal deck, metal overhead ... I've sandblasted quite a bit and the teletypes would have given sandblasting quite a run ;)

My problem was that they found out I could touch type. Manual typewriters at 65 plus words per minute. I hit bursts over 90 words per minute on a 100 word per minute teletype! My fate was sealed LOL

Best regards from Rochester, NY
Jim

OH YEAH -- better get informed -- here is a start
FCC Sends Ex-Ham to the Slammer
from The ARRL Letter / ARRL
Website: http://www.arrl.org on January 26, 2001
View comments about this article!

EX-HAM GETS JAIL, PROBATION FOR UNLICENSED OPERATION

Former amateur Richard Allen Burton this week was sentenced to three months in jail and one year's probation for unlicensed operation of a radio transmitter. Burton also must undergo psychological treatment.

Burton was sentenced January 22. The FCC says he'd been operating without a license on repeaters in Southern California. Burton is scheduled to report to the US Marshal's office on February 26 to begin serving his jail term. He has been free on $20,000 bond.

Formerly WB6JAC, Burton, lost his General ticket in 1981 as a result of unspecified violations. Since then, he's racked up a lengthy history of alleged unlicensed operation, most or all of it on amateur frequencies. He has served jail time and probation as a result of earlier convictions.

Burton was arrested last August 5 following his indictment by a federal grand jury in California. He faced six felony counts of violating the Communications Act of 1934.

"See! I knew it! I'm going straight to hell, right along with Mr.
Farnsworth!"

Mr. Farnsworth developed a teaching method. In the Farnsworth method,
as the speed approaches 20wpm, the differences between Farnsworth and
Morse begin fading away, and are gone entirely at 20wpm. The
Farnsworth teaching method is not meant to be implemented as Morse
Code, but you and all the rest of you OF's pretty much do as you
please. After all, you own ham radio.

Here's an example: "Leff right leff" is a method of teaching marching.
It is not a legitimate way to call cadence and is abandoned once
recruits learn to march, not that the Navy does much marching or needs
to know left from right. They got starboards, bulkheads and decks.
;^)

"BTW, who brought up "Technician"? I'm an equal opportunity sort of
guy; I don't
care what the license class of the robot is."

One of the old farts, now SK, was specifically targeting the NCT's with
his illegible "banana boat swing" transmissions. He said so himself,
and that is the incident that both you and I are referring back to.
73 and Merry Christmas, bb

>Hello, Len
>
>To some amateurs the how *is* important. Witness PSK, moonbounce, and other
>stuff. Anyone can grab a microphone and talk.

:-) Right..."anyone can grab a microphone and talk..." but so many
forget to listen to what they are saying after they remember to push
the PTT button. :-)

The first recorded and witnessed moonbounce was done by the U.S.
Army in the 1940s. The first witnessed and recorded phase shift
keying was done a long time ago, has been done so much that it
needs deep research to find out who did it first, academia, business,
or military. Frequency shift keying is even older.

>Somehow, a lot of folks get
>caught up in the code vs no-code argument that is getting *really* old.

Agreed. :-) But Test Element 1 is still in the U.S. amateur regs
and many longe-tyme hamateurs are furious that anyone has the
temerity to remove that beloved code test.

>Seems there used to be an am vs ssb argument back in the 60s as well.

Why? "Anyone can grab a microphone and talk..." :-)

>However, that *how* it is done is important if we wish to further ourselves.

Yes, it's terribly important for all hamateurs to be the very best
kind of morseman they can be. Tradition, the glory, the honor,
being able to communicate all over the world with the same
"language" and demonstrate the "unique good will of amateurs"
to bring about world peace and stuff like that through simple
short transient "contacts" on CW.

>Have a merry Christmas, Len, and try to come up with a new argument next
>year, hear? :)

You too, Jim...all around. :-)

Right...just as soon as I go down to the technical seminar down at the Legion Hall to get all the details on building that simple CW rig made from recycled 1990s telebision sets that poor impovrished third-world countries can use for communications to end their starvation problems.

I don't think a "Tuna Tin Two" is a solution, even with the best 2N2222 transistors. Starving folks want the tuna, not the tin.

No doubt everything will be solved worldwide by using Morse Runner to practice "radiosport" radiotelegraphy. I will stay tuned. :-)

Happy holidays,

LenAnderson@ieee.org

Irrelevant. The MEDIUM is the massage, therefore anyone who
wants operating privileges on the amateur bands below 30 MHz
MUST take that important code test!

Morsemen WILL manufacture stories of beeping derring-do whether
the morse test is eliminated or kept ad infinitum. That's a given.

When space aliens invade the earth in their huge frying saucers,
morsemen will Save The World using the unbreakable morse code.

Morsemen are the gods of radio. Long may they wave.

Absolutely correct. You can empathize after all your years of
experience at sea. Understood.

Tsk. 'Radio' begins and ends solely on the sea? What of LAND
where morse code was born, raised, and elevated to a magnificent
art form before radio was ever proved?

Maybe a massage WOULD fix your problems, Lennie, but I doubt it.

And the Code test is an FCC requirement.

> Morsemen WILL manufacture stories of beeping derring-do whether

Nope....They're just better than you...in 1953 and ever since.

Steve, K4YZ

Yeah, Lardass actually cried real tears on the last broadcast! hahahaha!!!!Just like the whining little girl he is! Then he abrubtly shut it off and spoofed Steve Holsten's caller I.D. through camophone.net and made a threatening phone call to K1TP, Jon Cunningham. And, do get help for that lisp from that 24/7 fellatio, Mongolloyd!

It really isn't necessary.

> >You aren't.
>
> Absolutely true. First thing you've gotten right so far...

That's simply false. I got the "Federal law and regulation" correct.
I got the part about me and my kind correct. I got the part about you
asking Jim for his military "papers" correct.

> >You can discuss and have discussed.
>
> And everyone can be sure that herr Heil will be in there with the
> "you ain't got no ham license!" :-)

If you can't take it, get a ham license or don't read the posts.

> Heil is utterly predictable. Can't address any subject thread and
> always tries for the misdirect.

Let's see...the thread title is "Awesome trainer" yet there you are,
asking Jim in which part of the military he served. Would you like to
discuss the awesome morse trainer? Has it helped you?

> >You get quite a number of things about amateur radio incorrect.
>
> I'm sure you'd like that to be true, but YOU are incorrect.

I'd actually be happier if you didn't get so many things about amateur
radio and other things wrong, but you do get them wrong.

> >I didn't work for Secretary
> >Powell and he had nothing to do with my amateur radio operation.
>
> I didn't think so. Powell has diplomacy. You don't.

Powell deals with thugs the same way I have but Mr. Powell wasn't at
State when I was. Deal with it.

> >How did you foul that up?
>
> Foul what up? I didn't "foul anything up," sweetums.

Your memory is short: The whole Secretary Powell thing which you wrote
and then snipped.

> You keep manufacturing incidents that don't, didn't exist. :-)

You bring them into existence, then try to slip them under the rug.

> >Good for you, Len. You didn't need an "Awesome Trainer" or an amateur
> >license to get into the Signal Corps.
>
> Never said I needed some "Awesome trainer."

Can't you stick with the thread?

> Again, you are manufacturing an incident that didn't happen.

> You do that consistently.

Do what consistently?

> >Is your objective in posting here to get back into the Signal Corps?
>
> No. What is YOUR "objective?" :-)

I don't have a single objective. I'm a radio amateur posting in an
amateur radio newsgroup. I choose to post here.

> Tsk. All you seem to do is pick on certain communicators that
> you don't like and then make like you "run" the show. :-)

It hasn't been established that you are a communicator. You certainly
aren't in "the show".

> >Sure it was, Len. I'm sure that when you first began doing such work,
> >you were strictly a rank beginner.
>
> Yes, I had rank. No, I was not a "beginner."

Yes, you were rank and a beginner.

> >That's fine, old timer. I'll be happy to carry on for some time after
> >you are able to be responsible for much of anything.
>
> I'm sure you would like that...it is shared with the trashman, you
> know, the Avenging Angle of the newsgroup. :-)

I'd like that? That isn't what I wrote but it is the nature of living.
There were people before you and there'll be people after you. You were
doing things when I was in diapers. I'll be doing things when you are
in diapers.

> >Things like that
> >even out. There are, of course, things which don't even out. If you
> >become a beginner in amateur radio, there is no realistic way for you to
> >enjoy four decades or more in the game.

>
> Tsk. Why is it SO necessary to do as YOU did?

It isn't necessary at all. I didn't state that it was necessary. I'm stating that it isn't even possible.

> Is your ego really that large that you evaluate everyone based on
> your "accomplishments?" Must be.

Tell us again about your experiences in the military and in the civilian world of electronics. Is your ego so large that you evaluate everyone based on your "accomplishments"? It looks as if that is the case. The only trouble is, your accomplishments don't mean much within amateur radio, your target group.

> >Quite a number of guys get into
> >ham radio late in life. Many of them are exhuberant and quick learners.
> >They make hay while the sun shines. Your pile of hay is quite small and
> >it is beginning to mildew.
>
> Tsk, tsk. More manufacturing of things. You have a very busy
> insult factory going. Not a good thing for the image of U.S.
> amateur radio, is it?

Don't worry about. You aren't involved in U.S. amateur radio or amateur radio anywhere else.

> >That's right, Len, but don't get too far ahead of yourself. When and if
> >you ever obtain an amateur radio license, you'll be a rank beginner in
> >amateur radio.
>
> Tsk, tsk, tsk. Still trying to misdirect away from the thread,
> aren't you? :-)

What are your feelings about the awesome morse trainer Hans brought up?

> "Morse Runner" is a code contest simulator, is it not? The thread
> also associated that with various others' military experience.

You can skip your military tales. All anyone needs do is check Google for any of the myriad tellings.

> Now you want to return to your (predictable) diatribe of "nyah,
> nyah, you will be a 'rank beginner' in amateur radio," yadada,
> yadada, yadada.

I didn't say that you will be a rank beginner, Len. You'd first have to actually obtain an amateur radio license. The likelihood of that happening is not great. If and when you ever do so, then you'll be a beginner in amateur radio.

> >You have not yet attained that status.
>
> What "status?" :-)

THAT status. :-) :-)

> Why is it so NECESSARY to have that federal license in order
> to discuss the test elements for ENTERING amateur radio?

You've discussed. You aren't taken seriously.

> >There's plenty to know which can't be picked up in a day.
>
> Oh my! Are years and years of "hard work and study" needed,
> oh mighty god of radio?

As in any other endeavor, years of hard work and study are needed to get it right. Some guys never do. Some pick up some or most. Some guys are great ops.

> NO ONE can be as good or experienced as yourself...you've
> implied that about you for years and years in here. :-)

Actually, I've never implied any such thing though I'm currently 41 years more experienced than you. :-) :-)

> >If you don't adhere to regs, procedure, protocol, etc., you'll be at
> >best marked as a green op. Carry on with that and you'll be known as a
> >lid.
>
> Oh, my, YES, by all means use the Proper Proceedure. Say "hi hi"
> in voice instead of laughing...report all signal strengths as "599"...
> and so forth.

When I read your stuff, I'm not saying "hi hi". If your sigs were any weaker, you'd be receiving.

> Who said anything about "not adhering to regulations?!?"

I did.

> Have you prepared some kind of court order for arrest based on
> your suppostiion of the future?

My "suppostiion" is that you'll never hit the airwaves as a radio amateur.

> >Carry it to the extreme of breaking FCC regs and the Commission can
> >"fire" you.
>
> Oh, my, der gruppenfuhrer suddenly morphs into Riley Hollingsworth!

Wrong. Nowhere did I state that I'm the FCC.

> So...if I laugh out loud on voice on the ham bands, I'm breaking
> some kind of regulation? :-)

Under most circumstances, if you show up on the ham bands at all, you're breaking some kind of regulation.

> >Outrage? I'm not even close to outrage, especially when you remind me
> >that you're an outsider to amateur radio.
>
> With your behavior, it's a wonder that anyone accessing this
> newsgroup wants to get into U.S. amateur radio.

My behavior? Most non-ham readers of this group don't share your talent
as a walking Preparation H advert.

> >Just pace the sidelines as
> >you've done from the beginnings of your r.r.a.p. history.
>
> Tsk. You should have put that as "all my life" instead of just some
> kind of "history in r.r.a.p." :-)

Have you been doing this stuff with regard to amateur radio your entire
life?

> No, wait. It must be RELIGIOUS THING with you. All without
> ham licenses are some kind of "infidels?" Yes, that must be it.
> You've gone on and on about that AMATEUR license as some
> kind of "holy grail" or a "Mecca" to visit or similar.

I know plenty of folks without ham licenses with whom I get along fine.
None of them are trying to impose their views on the regulation of
amateur radio. Get used to it: It is just you.

> You don't accept a whole career in radio-electronics as good for
> anything, do you? Nope. You dismiss it. Spoils the hell out
> your rant, doesn't it? :-)

Good for anything? Sure it was. It was good for jobs and paychecks.
It still didn't get you a pass into amateur radio. Don't be too hard on
yourself.

> >Let's see. You wanted to know which part of the military in which Jim
> >served.
>
> Jim who? Tsk. You are trying to be Hall Monitor again?

The Jim to which you made your comment.

> >The question I posed to
> >you would be much more apropos in this venue.
>
> No, NOT "apropo." The subject thread started out talking about
> a new freeware called "Morse Runner," a CW contest simulator.

So your question to Jim concerned that software, huh?

> I'm sure it is a nice computer program and well written.

Has it helped your morse speed?

> However, I'd never be involved in the so-called "radiosport" of
> making as many "contacts" as possible in a given amount of

> time. That's not communicating anything.

So now you're an expert at something else in which you have no
experience.

> That's just some kind of game.

It surely is.

> I can get all sorts of computer games to play
> with and so can everyone else.

Radio contesting isn't a computer game, Leonard. It takes place on the
air. Don't you get anything right?

> Do I need an amateur radio license to run a GAME on a computer?

Did anyone state that you need one?

> Absolutely NOT. Hundreds of thousands of unlicensed others do
> that every day, most not even using any sort of "wireless" hookup.

Feel free to continue. You can even comment to the feds about how best
it should be regulated.

> Do I need an amateur radio license to run a transmitter NOT on
> the ham bands? No, that requires, for some radio services (but
> not all), a COMMERCIAL license. Tsk, I've had one of those
> since early 1956. :-)

I don't much care what you do with any transmitter not on the ham bands.

> No, you keep coming back to what YOU think is "apropo," that
> of constantly bothering about MY not having an amateur radio
> license. That BOTHERS you since that's about all you can do,
> bring that up in any thread NOT about that subject.

Sort of like your quizzing of Jim--the one which seemed to be about his
military service but which you now assure us was about a morse trainer?

> >That's awfully nice of you, Leonard. My mom is visiting out your way.
> >Perhaps I'll arrange it so that she, my sister, my niece and my nephews
> >can drop by and sing some carols for you. That might bring some cheer
> >into your existence.
>
> "Cheer?" Try some industrial floor cleaner instead of laundry soap.
> They can scrub the oil spots out of the garage floor. Minimum wage
> even if their Green Cards are up to date.

We can talk about why your garage floor is so soiled some other time.

> Meanwhile, you keep on your wonderful, warm-spirited recruiting
> campaign to entice newcomers to U.S. amateur radio by saying
> they will all be "rank beginners!"

All newcomers to any field of endeavor are beginners. If it chafes you,
tough.

> The way you are going here there
> won't be any worry about using up all the sequentially-assigned
> call signs for years. :-)

Just worry about the one which might have been yours, old boy.

<james.hampton6@worldnet.att.net> writes:

>To some amateurs the how *is* important.

I would say that nowadays that's true for *most* hams.

In most of the developed world, the average person has a wide range of communications options. Some are relatively new (cell phones with cameras in them), others have been around a long time (Plain Old Telephone Service). Almost all are tending downward in cost and upward in ease of use.

It wasn't that long ago that the average person had very few affordable communications options outside of the US mail and Ma Bell. Sure, some folks were hooked up with precursors to the Internet, TTY machines and even mobile telephones, but those things were pretty much out of the reach of ordinary middle-class people. In those times, ham radio offered communications that weren't practical or affordable any other way.

For example, from the 1970s onward it used to be common around here for entire families to get ham licenses in order to keep in touch via the local VHF/UHF ham repeaters. Nowadays cell phones have just about eliminated that reason. Lots of other examples.

>Witness PSK, moonbounce, and
>other stuff.

Yep. Like CW!

Of course there *are* times when ham radio is still the only practical or available method of radio communications.

>Anyone can grab a microphone and talk. Somehow, a lot of folks get
>caught up in the code vs no-code argument that is getting *really* old.
>Seems there used to be an am vs ssb argument back in the 60s as well.

Goes back into the '50s.

>However, that *how* it is done is important if we wish to further ourselves.

If all amateur radio does is to emulate what is available other ways, it will simply die out.

What we need to keep alive are the things that make amateur radio unique.

Like Morse Code.

Why would I want to do that? Morse discussion is boring for the most
part. Useful in here for whapping opponents over their cyberian noggins
with, but in the end, it is just as annoying and worthless as the

fringers in here.

Nobody else uses it

That reminds me of a time when my wife tagged along as I went to the lumberyard. They had a display of gardening implements there, and as I looked through the shovels and rakes I make a loud comment to the effect of:

"I'm looking for a new hoe!"

Lennie's an idiot. Still think's Amateurs are the only one's who use
Morse Code, and completely ignores the reasons we DO use it...If the MILITARY
doesn't do it, we shouldn't...Of course then that put's Lennie in a bind since

HE is the one always trying to "make hay" over the use of the word "service" in Amateur Radio.

What an idiot. What a putz.

Too bad it didn't migrate south to massage the attitudes of the
mighty macho morsemen of the hew hess hay. :-)

Down here hamateur radio is a very serious business with much
strict discipline and demonstrating devotion to the kraft (on
paper) of getting the 1870s style morse absolutely Korrect.
"Fun" by the numbers. Hup, too, tree, foah!

I'm told that must be in order for hamateur radio to demonstrate
its "unique" charm to the masses. More morse, more march
to the 20 WPM beat.

Can't get on HF hamateur bands without it. It be da LAW heah!
:-)

I found this posted today, Thought I would share it with the group.

-JM

I WONT BE IGNORED

I may be a 70 year old man with nothing else going on in my life but I won't be ignored by a bunch of 435er's who I know is spending the day around their radios listening to everything said. I know you think I'm being obserd with my demands for "air-time" on your repeater but I want you all to be my puppets. Watch how I pull the strings here on 435.

My new "Rules Of The Road" for the 147.435 repeater:

I play my tapes when ever I want. You don't complain, You just listen - no turning off your radio - no talking over my taped message - no walking away to take a leak - NOTHING. I don't want my tapes interrupted for any reason whenever I choose to play them you will all need to stand by. If any parts of my taped announcements are interrupted I will punish the repeater with several hours of nonstop feedback. Even if my tape player fails for what ever reason I will punish the repeater for several hours with feedback. If you interrupt the feedback I will add one hour to my feedback schedule for each interruption. If the repeater times-out during my feedback schedule I will start the feed-back schedule timer over again. I will play my tapes over-and-over until I get tiered of hearing them. If when I un-key I hear any complaining I will play them again. When I stop playing my tapes and un-key you are free to start a QSO but keep in mind that as soon as you do so I get to jam over the top of you whenever I want with rude comments about your family background or telling you to "get the fuck outta here retard". You will not go to another repeater or any simplex frequency to continue the QSO that I interrupted, If you do I will call you jammers and proceed to play my tapes over-and-over again. If you don't start any QSO's on 435 so that I can jam them I will start kerchunking the repeater until someone complains about it and then I will call you jammers and retards. If the repeater is turned off while I am playing my tapes or interrupting your QSO's I will go to the output and complain that the repeater owner is a coward and afraid of my words and then make a chicken noise like this BOK BOK while calling him a chicken and a Riley supporter. No QSO will be permitted on 435 without including me in the round-table. If no one is talking and you want to start a QSO you first talk to me asking me how I am doing and if there is anything you can do for me.

As you can tell here my 435 rules of the road pretty much favor me over you in all points of conflict. I have all of the say-so about this

hobby and you have none. I don't care about how much time or money you may have invested in radio and repeater equipment, I mean business here. I may look and sound like a 70 year old senile man but I am a man on the edge. I have absolutely nothing to lose here and everything to gain. I will die sooner rather then later and I'll bet that my death will come long before the FCC and their slow bureaucracy can do anything about me. I have protected my property from possible vandals. I have protected my assets from potential legal confiscation. I signed over power of attorney to undisclosed family members to future protect me.

I am counting on you the 435 users to be my "squeaky wheel". I expect that you will get pissed off enough to daily contact authorities that will find that there is nothing more that they can do other refer to the same FCC and their slow bureaucracy.

The first meeting is going to be held right after Christmas. It's going pretty well so far. I'm gathering up the info that needs to go to the various "department heads".

At that point, we are going to set a date, in early spring if possible - to have two flights, tethered for the first, and a free flight with just enough equipment to track and retrieve for the second flight. We need to shakedown the equipment and ourselves.

Beyond that there are more presentations to make to other schools in the area. We'll probably pitch to homeschoolers also. They are always in need of projects for their children.

Welp, Mike, it really is all about the code. Such a shame.

Anyhow, I just got my copy of QST in the mail today. Says "Annual
Vintage Radio Issue" on the banner. Kind of like the rest of the year
except maybe April. I guess the joke's on us.
How's the balloon project coming along?

While perusing QST for September, 1961, I came across the following..

In 1961, ARRL's BoD conducted a survey of band/mode use of 8000 hams
(membership and license class not specified). Results (operating time):

HF:
CW: 34.4%
AM: 27.8%
SSB: 23.3%
RTTY: 1.5%
FM/NBFM: 0.3%
Other modes: 0.6%

VHF/UHF (all modes): 12.1%

Interesting link, Charles.

Initial thoughts are that it is a very interesting concept, and should probably work well. I'm going to have another read tomorrow morning when I'm not dead tired, and comment again.

After all, PSK does rule yaknow! ;^)

I believe the ARRL has a relatively recent survey on its website about the same thing. I'd dig it out but will wait till later to do so as it's time to hit the sack.

A big reason for SSB is that, in a pile up, the receiving station can make out people's voices without carrier heterodyne whistles. Also no wasted power transmitting carriers. Take a listen to a crouded CB channel sometime and hear all those heterodyne whistles.

> RTTY: 1.5%
> FM/NBFM: 0.3%

NBFM might have been better than SSB except it's wider bandwidth...

> Other modes: 0.6%
>
> VHF/UHF (all modes): 12.1%
>

Even back then, half the hams perferred voice (phone) modes (AM, SSB, FM). Compared to a bit over 1/3 perferring CW.

Not just in a pileup, either.

>Also no
>wasted power transmitting carriers. Take a
>listen to a crouded CB channel sometime and hear
>all those heterodyne whistles.

I'll take your word for it ;-)

The biggest reasons for SSB displacing AM on the ham bands, IMHO, are:

1) Allows more simultaneous QSOs in a given amount of spectrum
2) Greater "talk power" from a given rig (all the power is in the sidebands on SSB vs. ~2/3 of it in the carrier on AM)
3) High power SSB can be less expensive to build and operate than high power AM.

>> RTTY: 1.5%
>> FM/NBFM: 0.3%
>NBFM might have been better than SSB except it's
>wider bandwidth...

No, NBFM was even worse than AM in terms of "talk power". At the narrow deviations allowed for hams below 29 MHz, an NBFM transmitter was roughly equivalent to an AM transmitter running one-fourth the power. OTOH heterodynes were much reduced - capture effect meant you heard the strongest signal and little else.

>> Other modes: 0.6%
>>
>> VHF/UHF (all modes): 12.1%
>
>Even back then, half the hams perferred voice
>(phone) modes (AM, SSB, FM). Compared to a bit
>over 1/3 perferring CW.

Yep - despite the fact that in those days the spectrum available for US hams to use HF 'phone was much less than today. And the rig-cost differential was much greater. No WARC bands back then, and 160 wasn't included in the survey.

It should be remembered that in 1961:

- only ~8 years had passed since Generals and Conditionals got access to HF 'phone on the ham bands between 2 and 25 MHz

- only ~7 years had passed since 'phone was allowed on 40 meters, and 15 meters was opened to hams

- there were less than a quarter million US hams

- VHF/UHF repeaters were almost unknown on the ham bands. RTTY meant an electromechanical teleprinter in the shack, whose cost new exceeded the cost of many hams' entire stations.

It would be interesting to see how the mode and band use would break down today.

2896. ARRL GOES AFTER JACK GERRITSEN EX-KG6IRO

Newsgroup: rec.radio.amateur.policy
Date: 2004-12-15 14:02:27 UTC
From: netmanager2@yahoo.com

The ARRL wants Jack Gerritsen ex-KG6IRO thrown in jail!

ARRL Urges Action in Gerritsen Case

NEWINGTON, CT, Dec 14, 2004--In a strongly worded letter to FCC Enforcement Chief David Solomon, the ARRL has called on the FCC to intervene with the US Attorney's office in the case of former amateur licensee Jack Gerritsen, ex-KG6IRO, of Bell, California. The FCC already has affirmed a $10,000 fine against Gerritsen for interfering with Amateur Radio communications and recently proposed imposing another $21,000 fine for additional, similar violations. Gerritsen, who erroneously claims he's still licensed, allegedly has been bombarding numerous Los Angeles-area repeaters with verbal tirades for many months, often identifying with his now-deleted amateur call sign.

"It is urgent that the United States Attorney's office be brought into this matter without delay, and that procedures other than monetary forfeitures be brought to bear," ARRL General Counsel Chris Imlay, W3KD, wrote on the League's behalf in a December 13 letter to Solomon. Imlay asked Solomon to intervene "in this one instance, so that this matter is resolved without further delay." He suggested the time for gathering additional evidence was past, since the malicious interference continues.

Things were comparatively quiet on LA-area repeaters while Gerritsen was said to have been out of the US for about three weeks. When he returned to California on or about December 9, the transmissions resumed "with a vengeance," Imlay said. Repeater owners shut down their machines "to avoid the constant barrage of malicious interference," Imlay said.

In his letter, which also was e-mailed to Solomon's office, Imlay recounted some of the history of the Gerritsen case. In 2001, the FCC's Wireless Telecommunications Bureau (WTB) rescinded Gerritsen's Amateur Radio license grant after it learned of his earlier state conviction for interfering with police communications. As a result of the conviction, which he's appealed, Gerritsen ultimately spent some time in jail. He continues to maintain that the FCC can't take away his operating privileges without a hearing.

Gerritsen's now-pending Amateur Radio application remains in the hands of the WTB, which also will decide the fate of his General Mobile Radio Service (GMRS) license. The FCC set aside that grant last fall because of the allegations of continued unlicensed operation and deliberate interference. A Hearing Designation Order for Gerritsen is said to be

working its way through the FCC. But, Imlay noted, the slow pace of the case has angered and frustrated the Amateur Radio community, which has begun to view the FCC as powerless to halt the interference.

"Deterrence is critical to this effort," Imlay said, adding that the Commission's perceived inability to stop violations of Sections 301 and 333 of the Communications Act of 1934 and numerous Part 97 regulations "stands to quickly evaporate the years-long effort that has been so successful." Suggesting that the FCC will have a tough time collecting the fines it's imposed or proposed to levy on Gerritsen, Imlay said further delay will totally erode the Commission's excellent track record--in particular the work of FCC Special Counsel for Enforcement Riley Hollingsworth.

"Time is very much of the essence in preserving the sense of deterrence that exists generally in the Amateur Service," Imlay concluded.

The FCC's Los Angeles District Office, under District Director Catherine Deaton--not Hollingsworth--has primary enforcement responsibility over the Gerritsen case. Agents from that office already have tracked interfering transmissions to Gerritsen's residence and issued oral warnings that by all evidence have been ignored. The FCC has said that Gerritsen refused to let Commission agents inspect his radio transmitting equipment.

Deaton's office issued the FCC's recent Notice of Apparent Liability, proposing the $21,000 fine for Gerritsen's "unauthorized willful and malicious interfering radio operations." Imlay said the interference extends beyond California, since the repeaters are linked throughout the US Southwest, and the interference has disrupted "not only regular ongoing Amateur Radio communications but emergency communications as well."

Imlay said several hundred ARRL members have "repeatedly and with ample justification" complained to the League about Gerritsen's alleged activities. He called on Solomon and the FCC to "arrange for appropriate proceedings to be initiated to cause the incessant and damaging malicious interference to cease."

FCC Enforcement Bureau Assistant Chief George R. Dillon acknowledged the ARRL's letter December 14. "We are treating the allegations contained in your letter and the complaints we have received regarding his actions very seriously," Dillon said.

Anybody who gives a dime to the ARRL is stupid.

Same for anybody who believes the ARRL has ham radio's
best interests in mind.

Look for a major investigation into corruption, fraud, waste,
abuse, greed, & criminality at the FCC in 2005.

ARRL & FCC are both enemies of ham radio.

Dr Ham

CBers can memorize 20 questions, pass a ham test, become
ARRL Official Observers, and begin getting back at their old
CB enemies in a matter of just a few weeks.

What a great and legal way to get revenge on your old CB
buddies and have the full weight of the federal government
do the work for you.

1. Memorize 20 questions.
2. Get your ham license.
3. Become an ARRL Official Observer
4. Start turning in repots on illegal CB operators to
Riley Hollingsworth, who will be only too glad to justify his
worthless bureaucratic position by issuing warning letters to all
your old CB enemies!

What a plan! Join thousands of CB operators who keep Holligsworth's
in box full of reports every week of the violations of your old CB
enemies. Start your tape recorders rolling today. Great fun.

Turn in truckers too. Great entertainment and a great stress
reliever.

Dr Ham

You guys must be really bored, and have no life, to get off on
reporting these guys, to where ever you do....
Here is an idea for you do-gooders...Why dont you take matters into
your own hands? Go pin some illegals coax..go confront them...Steal
their rig...point the fcc to their house...Just get off your lazy
pussie ass..
Wait a minute, you guys have no balls, and hide behind your anonimity,
on the internet, in the newsgroup with not even your real e-mail
addresses...you guys are prettytough never confronting anyone
face-to-face...Never doing the dirty work, getting your jollies off
pissing people off...whatever..

I'm dreaming of a cum drenched Christmas
With every throbbing dick I suck
Where the peckers glisten
And keyclowns listen
To hear me suck and blow

I'm dreaming of a cum drenched Christmas
With every anal hole I lick
I loves horny nutsacks
And spread wide asscracks
Oh I loves to lick 'em all

May you keyclowns have me eat meat
And may all my dick suckings be sweet

> http://www.uspacket.org/plan_a.htm

Nice piece Charles, you obviously put a lot of thought and effort into it.

However I'll be very surprised if any of it gets off the ground for several reasons. First it would be in competition with the Internet which has all but killed wide-area ("long range") VHF packet "multicasting" a decade ago. What you're actually proposing is an HF version of the same basic technical approach which already died. I dunno . . !

Another one is the very dicey reliability of long-range HF comms due to the vagaries of propagation vs. the volume of QRM which would be involved particularly when the spots count is down. We don't need any more unmanned Pactor-style mailboxes chirping away on the bands.

A problem I have with it might just be me but what sort of content would be involved? What files about what would get shipped around for what puposes? Who would get what out of it that they can't get by existing means? Successful implementations of new ham radio HF digital comms is not just about the technology, it would also have be accepted and used by the general market too. Particularly since what you're propsing will require a significant number of collaborators to pull off. What are the marketing plans?

Chuck, computers? soundcards? If it doesn't involve twitching two pieces of bare copper wire together...

But seriously, who has stated such a need? If the OF's that seem to have everything locked up only want to implement CW nets...

Your idea has obvious utility in emcomms, but how do you get the data/info out of the affected area?

Or did I miss something?

Please point me to some other sites WRT the streaming, multichannel PSK. I'd like to know more.

Thanks, bb

Excellent!
Starting with "Gator"
804 301 4681

He (thinks) he "owns" channel 22 in Richmond, VA
so he keys up on others that are using the channel "without his permission."

He will key up until he thinks that the "troublemaker(s)" no longer wants to talk or they get tired of him "lecturing about the correct way" to use the channel!

Dumb-ass gave out his phone number!
(copy it down and write it on walls in truck-stops, payphone booths, restroom stalls that will take ink pen, magic marker or a sharp-obect that will carve into metal!)

Next item:

"Left-Lane Leroy" also in Richmond, VA

He despises truckers on Ch 19.
He obviously doesn't understand how he got his cb.
(Well, the trucks ship them to designated CB shops and the owner puts them on display for customers to look at before thinking about buying them.)

He also pretends to talk to "DX Land".
He calls out the numbers and pretends to be talking to them and tells ?? that some truckers are talking over top of ?? and starts cryin' and bitchin and complaining about truck drivers and the talking that they do.

Also, check out the subjects on Channel 6 in the western/south-western part of Virginia near SouthBoston/Halifax County.

Next Item:

Find out where these "one-way broadcasters" are coming from!
They mention some truckstop and an exit number on Channel 19 and tell drivers to goto , say , Channel 23.
Some talk about giving away cruises or free vacations to where-ever!

Hunt these subjects down, transmit their coordinates to the nearest FCC office, CUT The Coax;
And then , "Run for Cover, Mutha-Fuckahs!"

There's an awful lot of illegal power usage that can be heard in Richmond.
Check them out and have your own recorders ready to intercept what will be dubbed as :"WATERGATE - 2K5!"

The FCC doesn't give a rat's ass about hams, or about shortwave in general. Why? It's not profitable, it doesn't have massive lobbies spending obscene amounts of money to bring it to their attention, so it gets shafted. Hams interfere with each other all the time, and SW broadcast stations operate out of band (WHO gave WWCR approval to operate on 3210 when everybody knows that the US is not allocated any freqs there, that's tropical band for a REASON?) with impunity and the FCC does nothing because SW is the runt of the litter where broadcasting is concerned. The FCC spends big buck$$$ to hunt down every last FM pirate because the NAB screams about it, while SW pirates operate in the open for YEARS.

I really feel for Glenn....a commercial radio wannabe lost within the hobby of kings. All he really amounts to is a jammer with a particular interest in 75M AM.
If the man really needs a soapbox to air his opinions let him apply for a low power FM ticket or even better an internet radio station where the world could be his oyster but he and his broadcasting are neither needed nor wanted by a large section of legally operating hams.

If those illegal amps had decent spectral purity (harmonics
down a decent amount) then who cares. But they tend to spew
trash in band and trash TV reception and hams get blamed...

I'd ask you where you've been, Hans, but I know the question's rhetorical.

Slick Willy specifically stated that he was authorizing the deactivation
of accuracy inhibitors for non-military users based upon the pemise that
American military commanders could re-activate it, or the President could order
it's complete isolation from non-authorized users. That was in 1993 or 1994, I
believe.

WHY, Hans, would the United States NOT act to either "desensitize" the GPS
net, or completely remove it from use for the criteria set forth in the
article...?!?!

Is it your contention that, given a set of "extreme criteria" (attack on
the United States, overt acts of war, etc), that we should leave the net "open"
regardless...???

What was stated in the article is NOTHING NEW!

A friend sent me the link below. At first I thought it had to be an April Fool joke, but apparently The Shrub really >>IS<< that stupid!

http://www.nytimes.com/aponline/national/AP-Positioning-Satellites.html

UNQUOTE

What the article said, in part:

QUOTE:

Bush Prepares for Possible GPS Shutdown
By THE ASSOCIATED PRESS

Published: December 15, 2004

Filed at 10:17 p.m. ET

WASHINGTON (AP) -- President Bush has ordered plans for temporarily disabling the U.S. network of global positioning satellites during a national crisis to prevent terrorists from using the navigational technology, the White House said Wednesday.

Any shutdown of the network inside the United States would come under only the most remarkable circumstances, said a Bush administration official who spoke to a small group of reporters at the White House on condition of anonymity.

UNQUOTE

"The Shrub"...?!?!

"April Fool's Joke"...?!?!

Hans, you're an idiot or an Al-Queda supporter.

How do I know this?

Because ONLY an idiot or an Al-Queda supporter could suggest that making it difficult for terrorists to use our own systems against us is an "April Fool's Joke".

BTW...I correct my earlier statement about Slick Willy making the GPS net available in "93 or 94"...that was when he initially suggested it. It became effective in 2000. It was discussed in Flying magazine as early and the late 80's.

None-the-less, the idea of being able to inhibit or completely disable the system is STILL not new, and I for one hope they DO keep the reigns on it! It was an error to let it loose in the first place.
Steve, K4YZ

You mean "reins"?

IIRC, the inhibition was turned off before Gulf War 1 and simply left turned
off.

IIRC, the accuracy inhibition was turned off just before Gulf War 1 (1991) and President Clinton simply decided not to turn it back on.

Also IIRC, the effect of accuracy inhibition was to degrade the accuracy of "civilian" users to about plus-minus 30 feet.

>WHY, Hans, would the United States NOT act to either "desensitize" the
>GPS
>net, or completely remove it from use for the criteria set forth in the
>article...?!?!

The article talks about shutting it off. Or parts of it. Seems to me that capability should have been a part of it from day one.

I think Hans' point may be that we have become so dependent on GPS that turning it off would hurt us more than it would stop the terrorists. The 9/11 attacks didn't depend on GPS in any way.

Or it may be that openly talking about what you're going to do removes a level of protection. Terrorists with any sense (yes, an oxymoron) know now that they shouldn't depend on GPS.

>Is it your contention that, given a set of "extreme criteria" (attack on
>the United States, overt acts of war, etc), that we should leave the net
>"open" regardless...???

> What was stated in the article is NOTHING NEW!

Sure it is.

>Even Len's posted some stuff just to get the
>converstaions going.

He has?

>Code trainers are nice and all, but.....

Well, here's a revival of an old subject:

FCC recently turned down an ARRL proposal to divide the HF bands by bandwidth only. While the basic concept looks good, some of the resu;ts (like allowing automatic stations anywhere on the bands) would not have been.

Some time back, a few of us here discussed the idea of "refarming" the Novice segments as "digital playgrounds". The idea was that Novices and "Techs with HF" would get more bandwidth on their current bands (say, all of the CW/data parts of 80/40/15 now allowed to Generals, but at the Novice/Tech Plus power level) and the present "Novice bands" on 80/40/15 would be opened up to digital experimentation. Meaning any properly documented mode except analog voice would be allowed there.

A better idea?

Then there's Hans' (K0HB) two-class upgrade-in-ten-years-or-leave license concept. Perhaps it's time for that to become a formal proposal. While I don't agree with all of it, I'd really like to see what reaction and comments it would generate.

---

btw, SKN will be on New Year's Eve. (Actually, it's on UTC New Year's Day). The definition of "straight key" includes bugs and sideswipers, too - just no keyers or keyboards. Historic maritime shore station KPH will be on the air again with the call K6KPH.

Had to do with inhibiting high-accuracy commercial applications like surveying and precison aircarft navigation AND the competition. The Russians have their own GPS system and the Euros are developing yet another one. Down the road the most accurate of the three systems is where the traffic will go and there's big bucks at stake in that.

Thanks for the great site reference Ruido. After looking at the
letters I noticed a few things:

1 - all enforcement letters come in response to complaints made by
people who were affected by deliberate tampering and/or repeated
threats.

2 - The letters were in response to licensed operators, or those with a
license application pending.

3 - The FCC is a funny entity. I think for the first time ever, I
agree with Howard Stern. They offer $80 licenses for $20 products; no
training, no personalized frequency, no benefit included, except being
duped into paying a cleverly masked tax. If restricted use for these
frequencies is really an issue, the FCC should first approach the
manufactures of these products and ensure that proper visibility for
the license requirement is included on the packaging.

4 - I do not fall under any of the pretenses described on that page
that would qualify for enforcement by the FCC. My $20 handset will be
used on channels 8 - 13, which are approved for use without a license.
My intended use will clearly be within the 2 mile radius of the FRM
frequency.

There are industries, including things as basic as grain farming which depend on the current accuracy of the GPS system.

Some sheet-head with a bomb doesn't need GPS to find a tall building to target, but many segments of our economy depend on it. Taking down GPS for that reason is equivalent to taking down the world-wide-web because Tim McVeigh used it to look up the address of the Federal Building in OKC.

Being a member of the Chamber of Commerce counts as having a license?
What an odd exception.

Harv, if you want to get the GMRS radios do a froogle search for the
Uniden handsets. I recently purchased my two GMRS/FRS handsets,
complete w/ rechargable battery, charging station and belt clip (the
only thing I think its missing is a slot for an ear piece) for $20
online, shipped.

I recently posted questions on whether or not I should shell out the
$80 for my license or not. After many posts, with recommendations,
I've decided to not get the license. It servers no purpose. There is
not instruction given, expertise needed, or private band assigned when
you get your license. Its a cleverly desguised tax by the FCC. And
from what I've research, not enforced, unless you deliberatly interfere
with other peoples communications, and those notices are sent to
license holders or those applying for thier license.

But it is sort of interesting, since it's akin to shutting down radio
stations so they can't be beacons in times of war, and countries taking
down signs so invaders would have a bit more difficulty and lights being
kept low during WWII. In other words, there is precedence.

On the other hand, you're right, it would affect quite a bit at this
point. And unless there is all out war, one has to balance the danger
of something against the inconvenience.

It was.

Where were you?

>I think Hans' point may be that we have become so dependent on GPS that
>turning
>it off would hurt us more than it would stop the terrorists. The 9/11 attacks
>didn't depend on GPS in any way.

No, Jim...it would "inconvienience" us...It would not hurt us.

And the "hijack an aircraft and use it as a missle" thing is unlikely to
happen again.

Just think how much more damage Saddam's SCUD's could have caused had they
had GPS navigation rather than their antiquated Soviet inertial navigation.

>Or it may be that openly talking about what you're going to do removes a
>level
>of protection. Terrorists with any sense (yes, an oxymoron) know now that
>they
>shouldn't depend on GPS.

You mean they shouldn't depend on GPS >>AFTER<< the first volley of
attacks, don't you...?!?!

As of RIGHT NOW, anyone with the money and desire to do so can use GPS
against us. So, Jim, in YOUR estimation, how many lives are worth the
inconvienience of not having a moving map display in your Escalade...???

>>Is it your contention that, given a set of "extreme criteria" (attack on
>>the United States, overt acts of war, etc), that we should leave the net
>>"open" regardless...???

A strange thing in this whole new range war is something that is a little disturbing.

That is the propensity for people who think that while it is an okay thing to refer to the previous president as "Slick Willie".

And yet it is some sort of crime to refer to the present one as "shrub".

While I do not call either one by those pejorative, it is hard to not equate such an attitude as hypocrisy. There seems to be an attitude brewing that any disagreement equals treason.

Hey Pubs!! Now is the time to revive the Sedition Acts. This is your chance to quash those opposing viewpoints! ;^)

And How! The PSK "segment" of 20 meters is being ruined by Pactor
stations that transmit, looking for a signal, and hardly ever break,
just a short pause to listen, then start up again. These are
w i d e signals with lots of spurs and (splatter?). The net effect is
that the signal often takes up the whole segment. Since most of us are
using almost qrp levels, we get stomped. That is why Digipan now
includes a Pactor receiver, so we can report the miscreants.

> Some time back, a few of us here discussed the idea of "refarming" the Novice

That is a very good idea. If we are ever going to get digital voice
going, we need a playground that doesn't interfere with the rest of the
world. Or I should say it would be a help.

Dear Alexis,
The FCC bases its investigations on repeated reciept of complaints against any station, licensed or not. As I understand the FRS/GMRS band, GMRS licensed users have primary band privledges where FRS limited to 500mW share certain channels. If you really want to get into radio as a hobby investigate how to get your ham radio license and you'll see there's a world of difference between GMRS and Amateurs...anyway have fun.

well,
I never had to go that far. some of the more interesting characters did it to themselves (anyone remember Tim Hoffman?). Mostly, I got off the band and stayed off. its been just a hair under 10 years and I have not regretted the decision.

besides, if any of my old friends wanted to talk to me, getting the ham ticket was easy (compared to when I first took it, it is now stupidly easy).

but I digress, I never had to do any of the actions you named in your previous postings. it wasn't worth the headaches it would have generated 9and don't forget about the paperwork).

I got my ticket and got out. no more, no less.

I guess what was once a priv is now our "rights!"

Protecting America is not stupid nor an April Fools joke. Hans and Kell may want the terrs to use guidance sytems to harm America, but I'm with Bush on this.

And though "selective availability" was initially turned off for the Gulf War, it remained off and in 2000, Slick Willy commanded it to stay off. They can encrypt it also.

Meanwhile, the Euro is building a compatible fleet of satellites that the terrs can use in the absence of the USAF system.

> No, it was not.

You are correct, Steve. Nothing new here at all. In fact I am surprised that the story was even written, except maybe as just a reminder. Shutting down the system has been a part of the system since day one.

Allowing the system to be more accurate was more of an economic decision than malfeasance by a former president. I suspect that considering the economic impact of the use of accurate GPS, any sitting president would have made the same decision.

What is worrisome is that IF the system is shut down even temporarily, the effects could cause as many problems as they prevent. We are *that* dependent on GPS.

Here is just one (admittedly scary) example:

In Oregon, there is a pilot project using GPS.

http://www.odot.state.or.us/ruftf/faq.html

http://economics.about.com/od/taxesandeconomicgrowth/a/mileage_tax.htm

Don't like paying gasoline taxes? In Oregon, you will be able to forgo them by allowing them to track the mileage that you drive within the state. Your GPS simply reports your position as you drive around the state. When you gas up at the pump, a sensor subtracts the tax on the gas, and you don't pay the tax until you get a statement (presumably on your credit card.

Aside from the obvious Big Brother aspect of this scheme, if the GPS were to go down, there would be lots of money lost.

As an aside, is this creepy or what? I can foresee a time when the records of *everyone* driving near a crime scene could be subpoenaed and you'll have to prove that it was not you who murdered the person and dumped their body in the creek, etc., etc,etc.

Bill Clinton is/was a documented liar. Whatever good things he DID do will be forever tainted by semen stains on dresses and videotape of a then-sitting president blatantly lying during a sworn deposition.

Bill Clinton had EIGHT years in which to take action to prevent an act the likes of "9/11", yet he did not. He had more than adequate evidence that they (Al-Queda) could strike with effective force on the FIRST WTC attack.

> While I do not call either one by those pejorative, it is hard to not
>equate such an attitude as hypocrisy. There seems to be an attitude
>brewing that any disagreement equals treason.

Not treason, Mike.

A matter of effective expression.

Hans started this off with a snide refrence to a sitting President and further made ludicrous suggestions that would, on the face of it, demonstrate that he has pro Al-Queda sympathies.

It was idiotic.

> Hey Pubs!! Now is the time to revive the Sedition Acts. This is your
>chance to quash those opposing viewpoints!

In our reasonable defense, there can be no gray area, Mike. We either take steps (or have plans in place) to defend and protect ourselves, or we don't.

Hans doesn't favor our reasonable defense. He expressed THAT rather clearly.

No "DOS Hint" needed Hans.

Your suggestion that "the president's plan" to shut down GPS in response
to some significant emergency was enough.

The article clearly defined that it was just a "plan".

That "plan" was expressed almost 10 years earlier by President Bush's
predecessor.

>>>"The Shrub"...?!?!
>>
>>Yes.
>
> Hardly.

How? It's a nickname. If President Clinton can be called "Slick Willy", then President Bush II can be called "Shrub". Or "W".

One of the most important freedoms we enjoy is the freedom to publicly criticize and disagree with public officials, including the president.

Remember too that *he* works for and answers to *us*, not the other way around.

>This nation has bandied-about it's "Don't Tread On Me" attitude
>for since the fifties yet has gotten into the practice of tucking tail and
>running when it get's slapped around a little bit.

What *are* you talking about?

Did this nation "tuck tail and run" from Korea? Vietnam? Western Europe? Kuwait?

>We finally have a President who slapped back.

Did he slap the right people?

There is currently *no* evidence that the SH regime had anything to do with any terror attacks. Nor is there any evidence of "weapons of mass destruction" in that country.

Afghanistan is a different story. Yet the masterminds of the 911 attacks were allowed to escape from that country, by the very administration you admire so much.

The USA has spent over 1000 servicepeople's lives, many more thousands of their injuries, and hundreds of billions of dollars to overthrow and capture SH. Now

that country is a mess, with an estimated 100,000 dead from the war and its aftermath. And ol' SH hasn't been formally charged with anything.

>Now everyone is upset that
>he actaully DID what he said he would do.

No. People are upset that the results aren't what they were promised. The mission hasn't yet been accomplished, regardless of what some banner says.

>>If it's OK to call President Clinton "Slick Willy", then it's also OK to
>>call President Bush "the shrub".

And that's a fact.

>>>"April Fool's Joke"...?!?!

>>>Hans, you're an idiot or an Al-Queda supporter.
>>
>>I don't think he's either.

Don't you have a spellchecker, Steve?

>>IIRC, the inhibition was turned off before Gulf War 1 and simply left turned
>>off.
>
> Perhaps. Still does not negate the fact that it was a mistake to do so.

Why was it a mistake?

Has any terror attack used the increased accuracy of GPS? Or has the increased accuracy been used by millions of various users ranging from boaters to surveyors as an easier, cheaper way to know where they are?

Perhaps we should ground all nongovernment aircraft bigger than a certain size, so that a 911 style attack could never be repeated. We could also outlaw certain fertilizers and the rental of trucks bigger than a pickup, to avoid another Oklahoma City.

A little less Orwellian is that the cellular sites all use the GPS time signals to synchronize their switching. It's gotta be very precise or it no workee.

Steve,

If a gas station owner decides to protect himself against a potential robber by hooking dynamite up to his gas pumps, I might consider the idea not to be a particularly sound one.

I think Hans is pointing out that turning off GPS might not be the best idea in the world.

I believe that option was being looked at as a last resort. I doubt that would be used for terrorists. In case no one noticed, Russia is building up ICBMs designed to defeat any anti-ballistic missiles the U.S. puts on-line. You should realize that we have been invading countries with missiles that can contain a nuclear warhead. Other countries (including Russia) are not missing that fact. Should satellites or radar reveal a *lot* of launches, it just might be a good idea to turn off the GPS. It might not save Washington, but it would probably save Bush's bunker. Other than that, the idea of turning off GPS does not strike me as particularly sound.

Pope Bush ... er, excuse me, President Bush, has not exactly enamoured himself nor the United States to most of the civilized (or less civilized) world. Bush certainly is not an idiot; he's got a lot of folks convinced that he is right. I find it fascinating that blame for the deficit seems to be pointing everywhere except where it belongs - right at the White House.

I also love how he lauds the men and women of the U.S. military - and both federal funding for the V.A. drop every year. So, your boy in the White House says one thing and then does another.

Actions speak louder than words.

Best regards from Rochester, NY

>While perusing QST for September, 1961, I came across the following..
>
>In 1961, ARRL's BoD conducted a survey of band/mode use of 8000 hams
>(membership and license class not specified). Results (operating time):
>
>HF:
>CW: 34.4%
>AM: 27.8%
>SSB: 23.3%
>RTTY: 1.5%
>FM/NBFM: 0.3%
>Other modes: 0.6%
>
>VHF/UHF (all modes): 12.1%

Without a single poll to back me up, the following could be said to be accurate for 1911:

>Any Frequency:
>CW: 100% [on-off keying]
>AM: 0%
>SSB: 0%
>RTTY: 0%
>FM/NBFM: 0%
>Other modes: 0%
>
>VHF/UHF (all modes): 0%

In fact, there was NO ARRL and NONE of the amateur radio enthusiasts were legal! [NO radio regulating agency active in the USA in 1911] :-)

Sunnuvagun!

Steve,

Folks have become so dependent upon modern conveniences. Many times I've handed money to some kid at a cash register and he/she punches in the exact purchase price and *not* the amount of money I forked over. Now the machine says zero change. I've seen them resort to calculators and one had to get a manager (no calculator and she couldn't subtract $12.35 from $20.00).

Take these same folks (most likely the ones that will ultimately earn big money - engineers don't), put 'em on a 50 foot boat out for a cruise - and the GPS shuts down. Now what do they do?

Reach for a direct satellite cell phone. Ooops - maybe they turned them off too?

Come to think of it, if they shut the communications satellites off, that will severely limit communications overseas and make any terrorist cells less able to act. No Internet from overseas and telephone calls will probably be in the neighborhood of $15.00 per minute. Sounds good to you, right? Or are you pro terrorist?

Better get a letter off to the White House now! We can *really* be safe if we shut down the communications satellites! No overseas Internet for terrorists to communicate over.

Ooops ... I forgot. Russia has made many more launches than we have. Some 10 times in a couple of years. Europe, Japan .... say, believe it or not,

we don't have the exclusive anymore. In fact, we might be in danger of becoming a bit player. Maybe that is why Bush wants to push for Mars. Make his place in history.

I see some real good research on diabetes. Why am I not surprised that it is coming out of Great Britain, rather than the U.S.

I note that one medication I had was $120.00 for a 30 day supply. They raised my co-pay to $48.00 (40%). They told me to get a generic. I did. Now I only pay $8.00. It works just great! I was really surprised to find that the cost of the generic was $98.00!!! The insurance company pays far more now for me to use "generic" ($90.00) than the "brand" ($72.00) name. LOL. Bush has sure covered the drug companies so well that they are raising the generic prices up close to the brand name prices.

How's your health insurance? Nice and cheap? Low deductibles? Why am I not surprised?

Our biggest danger is likely not external; I suspect that we may simply self-destruct like the U.S.S.R. did.

Best regards from Rochester, NY

Jim, I am as likely to use an analogy as anyone else, but I'm having a
real hard time following your gas pumps-dynamite one....

>I believe that option was being looked at as a last resort. I doubt that
>would be used for terrorists.

Of course it was a "last resort". Although they didn't use those words in
the article, I thought it pretty well stated that this was NOT a "first line"
option.

Hans' attempt to ridicule the President made it sound as if President Bush
was ready to throw the switch at any moment.

>In case no one noticed, Russia is building up
>ICBMs designed to defeat any anti-ballistic missiles the U.S. puts on-line.

I am sure they are. And we'll spend money to defeat that...They'll
counter that...We'll come up with a new "stealth" technology, then they'll copy
it, etc, etc etc.....

>You should realize that we have been invading countries with missiles that
>can contain a nuclear warhead. Other countries (including Russia) are not
>missing that fact. Should satellites or radar reveal a *lot* of launches,
>it just might be a good idea to turn off the GPS. It might not save
>Washington, but it would probably save Bush's bunker. Other than that, the
>idea of turning off GPS does not strike me as particularly sound.

In the matter of a military first strike by Russia or any other soverign
nation, no, GPS probably wouldn't matter.

>Pope Bush ... er, excuse me, President Bush, has not exactly enamoured
>himself nor the United States to most of the civilized (or less civilized)
>world. Bush certainly is not an idiot; he's got a lot of folks convinced
>that he is right. I find it fascinating that blame for the deficit seems to
>be pointing everywhere except where it belongs - right at the White House.

You...me...Joe Average Citizen is responsible for the deficit, Jim.

We buy the Nissan's, Kia's, and cheap clothes at Wal-Mart.

We buy the DVD players manufactured in China or Korea, the shoes made in Malaysia, and the furniture from Denmark.

Wanna stop a lot of the "deficit"...??? Stop the export of welfare money to 3rd world countries who divert the monies from food to weapons...Stop buying the above mentioned items in favor of higher priced American made items...

>I also love how he lauds the men and women of the U.S. military - and both
>federal funding for the V.A. drop every year. So, your boy in the White
>House says one thing and then does another.

"My boy" is not the one solely responsible for that, Jim. A review of federal spending on benefit programs going back 3 decades will show otherwise. They were cutting VA funds before I made Sergeant in 77...

>Actions speak louder than words.

Yes they do.

Bill Clinton said he did not have sex with that woman and that he'd track down Osama bin Laden and others responsible for the WTC and USS Cole bombings.

He lied. The price was even more American lives lost due to camel-fornicationg terrorists, and a complete humiliation of the Office of the Presidency.

G W Bush said that Al-Queda was going to pay a price for it's treatchery in NYC.

He kept his word. Yes, American lives have been lost in combat, but the one thing the "rest" of the world does NOT do anymore is doubt the word of the American President if he says he's going to do something, whether they like what he's saying or not.

So you are quite right...Actions DO speak louder than words. I can tolerate G W stating his case, making a decison, and then taking the heat for mistakes. Bill Clinton is STILL lying about Monica Lewinsky and every other controversy he got himself into in the White House despite evidence to the contrary...

And to top it off, he AND his wife, now Senator from New York, tried to make off with thousands of dollars of property from the White House when they left and were forced to return it. And what is she doing now...?!?! "Testing the waters" for a run at the White House herself.

>terror attacks. Nor is there any evidence of "weapons of mass destruction" in
>that country.

Iraq is not the only page of the story.

>Afghanistan is a different story. Yet the masterminds of the 911 attacks were
>allowed to escape from that country, by the very administration you admire so
>much.

I hardly think they were "allowed" to escape. The Russians found out just
how porous those mountains are. Considering what we've accomplished there, I'd
say we fared a bit better, however Al-Queda has the home court advantage.

>The USA has spent over 1000 servicepeople's lives, many more thousands of
>their

I'll ask you the question again, Jim, and see if you can answer it for me:

"Did you understand what I wrote, Jim?"

You have spanked Lennie for assinine single letter typos rants before. So
why do you now do it?

>>>IIRC, the inhibition was turned off before Gulf War 1 and simply left
>turned
>>>off.
>>
>> Perhaps. Still does not negate the fact that it was a mistake to do so.
>
>Why was it a mistake?
>
>Has any terror attack used the increased accuracy of GPS? Or has the
>increased
>accuracy been used by millions of various users ranging from boaters to
>surveyors as an easier, cheaper way to know where they are?

The point was not about stopping an attack. It was about a response to an attack.

I guess I see things a bit too "black and white", but I thought the article was pretty straight forward.

As for all those other uses, Jim, (especially recreational users, etc...) the loss of GPS accuracy will be the least of their worries if the set of "extenuating circumstances" occured that the article suggested.

>Perhaps we should ground all nongovernment aircraft bigger than a certain
>size,
>so that a 911 style attack could never be repeated. We could also outlaw
>certain fertilizers and the rental of trucks bigger than a pickup, to avoid
>another Oklahoma City.

And perhaps just keeping better tabs on what we have and how we use it will do.

You're preaching to the choir here, Jim.

>Come to think of it, if they shut the communications satellites off, that
>will severely limit communications overseas and make any terrorist cells
>less able to act.

Dunno about you, Jim, but I am pretty much able to communicate world wide
on a semi-reliable basis without Internet capability.

If I were a combatant in a remote area without satellite, I betchya I
could get a message to where I wanted it to go, and get instructions in return.
(And for Lennie and Brian's benefit, that's even withOUT a code key at
hand...)

>No Internet from overseas and telephone calls will
>probably be in the neighborhood of $15.00 per minute. Sounds good to you,
>right? Or are you pro terrorist?

Hardly. But the terrorists are pretty well funded...certainly a lot
better than my own personal budget! But I can still communicate without the
Internet...Wanna bet they can

>Better get a letter off to the White House now! We can *really* be safe if
>we shut down the communications satellites! No overseas Internet for
>terrorists to communicate over.

How much MORE ya wanna bet that we can do exactly that if we thought it
was in our best interests to do so?

>LOL. Bush has sure covered the drug companies so well that they are raising
>the generic prices up close to the brand name prices.
>
>How's your health insurance? Nice and cheap? Low deductibles? Why am I
>not surprised?

Less than $3000 a year for a family of four, no deductibles (unless I go
"out of plan").

>Our biggest danger is likely not external; I suspect that we may simply
>self-destruct like the U.S.S.R. did.

You're almost absolutely right...Until we demand tort law reform, cap
damages limits and demand that health care conglomerates like HCA, Tenet, and
others put the public ahead of profits, we very well may..at least as far as
healthcare goes.

Our economic deficits are due MOSTLY to OUR gluttonous consumerism, and
unless WE decide that we want to put the good of the Nation ahead of the good
of our selves, then you are again correct...we may very well implode.

Implode is the right word, Steve. Our almost inconcievable national
debt is being propped up by foreign money propping up the dollar.
Problem is that as the dollar gets weaker, at some point two things are
going to happen:

1. Other countries, including the one that is pumping the most money
into the US, are going to look elsewhere for the place to put their money

2. The dollar will cease to be the worlds preferred currency.

At that point, we will be hurting. No amount of blaming the "other"
party is going to make a bit of difference. This is some pretty basic
economic truth, no conspiracy theories or whackiness needed. Just check
out who the biggest investor in the US is at this time.

Anyone that isn't scared shitless is not paying proper attention.

And no "Len Anderson" was active in 1911, antagonizing and telling those radio enthusiasts then (who WERE legal, Lennie...sorry...) how to go about doing what they were doing.

Actually, Reginald Fessenden did a lot more than that, as early as 1900. By 1906 he had two-way transatlantic *voice* radio communications working.

>Couldn't have been
>much power else the mic would have burnt up.

He got at least a kilowatt from one set.

>These
>mics vary in resistance along with the sound they hear.

Which is all an AM modulator really does.

Point is, there were folks using practical voice radio years before 1911. It's all well documented. Of course that early voice equipment was more expensive, less reliable and did not perform as well as its Morse code counterparts.

>> >AM: 0%
>Near but not = 0

Exactly!

>Well, how far up did spark go?

Depends entirely on the design. In those days, the conventional wisdom was that longer waves = longer distance, so there was little interest in going above about 1 MHz.

>No, *all* activity on radio was legal. Anything not specifically
>outlawed is legal. The radio regulations came later.

There was *some* radio regulation in the USA as early as 1906. In the years leading up to 1912, there were a number of bills introduced into Congress to regulate radio even more. But there was no great urgency to enact any comprehensive radio regulation until the Titanic disaster.

How long a drive is it from Rochester to Canada, Jim? How much do you think those same medications, made in the same factories, cost in Toronto or Montreal?

>How's your health insurance? Nice and cheap? Low deductibles? Why am I
>not surprised?

Mine's pretty good but but it's not cheap. And every year the deductibles go up.
>
>Our biggest danger is likely not external; I suspect that we may simply
>self-destruct like the U.S.S.R. did.
>
I think that in some ways that process has been going on a long time. For example - remember when a high school education and some specialized training and skills would get the average person a good job? And when most of those jobs paid enough in salary and benefits to support a middle class family?

I don't think we'll see an implosion - rather, just a gradual slide. A little bit here, a little bit there, until more people wake up.

Yes, yes, yes, good old Reggie Fessenden did it. At least
once with an audience on Christmas Eve, 1906.

NOBODY followed that example. :-)

Yes and no. The LAW defines what is legal and what is illegal.
Without the LAW specifically covering it, it is neither legal nor
illegal.

By the way the Radio Club of America DID exist in 1911.

>The radio regulations came later.

Of course. 1912. But the implication of the "1961 Poll" is rather obvious to tout CW (on-off keying). Especially considering the source of that posting.

1961 was 43 years ago. Times change. Technology changes.

There was NO personal computer in 1961 except for a few with lots and lots of money. Very few. In 2003 one family in five in the USA had some kind of Internet access...that makes it roughly 60 million folks a year ago. One out of three USA citizens has a cell phone subscription now, or roughly 100 million of those.

We can mumble all sorts of things about the PAST, but that is just mumbling, having little relevance to the present and future.

One correspondent, an obvious fan of Reggie, thinks that "lots of folks" were doing AM with a special carbon microphone in series with the antenna lead.

The "lots of folks" were restricted to Fessenden's work group at one station, perhaps four in all. [see Thomas H. White's early radio history in the USA papers, a fascinating look at that]

There's nothing in Aitkin's histories (such as "From Syntony to Spark" to the tome I mentioned earlier) to indicate that anyone was bothering to emulate Fessenden's method. Lee de Forest wrote that he was able to do some AM low-power with his "audions" which surprised some USN radiomen in the NYC area at the time.

AM was first done on a large scale in WIRED telephony, specifically for the "carrier" form of multiple circuit transmission (frequency multiplexing) on a single pair of long-distance wires. The telephone people were responsible for the upsurge of interest in "wave filters" and the formulation of the first passive L-C filter theory. John E. Carson (not the "Tonight" show host) came up with the first complete mathematical description of AM and FM.

Reggie Fessenden IS responsible for the predecessor to the
"BFO" when he was able to increase the intelligibility of his
detectors by using a very small spark generator loosely coupled
to that detector. Fessenden called it a "heterodyne detector."
When Ed Armstrong invented the modern "superhet" in 1918 he
was mindful of Fessenden's method, so Ed called his system a
super-heterodyne. That's how we got that name as well as the
familiar short term of "superhet."

>>No, *all* activity on radio was legal. Anything not specifically
>>outlawed is legal.
>
> Yes and no. The LAW defines what is legal and what is illegal.

> illegal.

That's a philosophical viewpoint on "legality." :-)

English Law recognizes that people do a LOT of things and most
of those are NOT concerned with any law covering it. Attornies
can make very "learned" distinctions on it, but, in the basic terms
of "legal" and "illegal," something not covered by any law simply
IS and is neither legal nor illegal.

> 1961 was 43 years ago. Times change. Technology changes.

The original posting of the first message in this thread appears
to be nothing more than a refined Troll. :-)

Technology of ALL radio, indeed most of electronics in general has
changed dramatically with the introduction of the Solid State Era.
So has the operating practices over those intervening 43 years.
Radio amateurs have been lagging the practices of the rest of the
radio world since that time despite the protests of the most die-hard
"amateurs are in the cutting edge of technology" advocates. Those
of us who were IN the electronics industry at that time (and before)
were all able to see that. Amateurs who had no news of the rest of
the radio world's advances (except long after the fact) will protest out
of some ignorant pride in their amateurism, but that is necessarily
true. Evidence can be found in the early 1960s ARRL "Handbooks"
compared to the industry publications of that same time.

I have nothing against any hobbyist defending their "turf" in scope of
hobby activities. I DO have much against those hobbyists either
stating that amateur radio hobbyists are "advancing the state of the
art" just by existing or that all regulations should continue to reflect
the PAST in all things regarding amateur radio practices.

Those who wish to constantly re-create or re-enact the past by
becoming the very best morsemen (according to older, outdated
standards) can do whatever they like as far as I'm concerned.
The problem occurs when morsemen get too full of themselves and
try to "run the show" by demanding that all newcomers to amateur
radio MUST pass a telegraphy test in order to obtain an amateur

radio license. These morsemen don't run any show, they are but participants in the older arts of amateur radio. They aren't role models of what is good despite their claims of "superiority" in radio.

"In some ways it's the '60s all over again. Focusing on the wrong problems and
fighting the wrong enemy. Most of all, a short-term point of view."

Jim, what are the right problems to focus on? Who is the right enemy?

It will be interesting to hear what your NPR trained mind will come up with.

Hello, Steve

I hope she wins.

Anything to share the grief. The only way we could get rid of governor Rockefeller was when he became vice president after Spiro Agnew got caught up with problems (after Tricky Dicky got caught up with his own problems LOL).

So, you can have her ....

(the truth comes out LOL)

Well, if Jim (N2EY) doesn't mind me jumping in here ...

My own beliefs are that the free market is not necessarily the right place for certain things. Would we have all of the nice communications satellites if the government had not been in a space race with Russia (and spent many billions of dollars)? Now, of course, it is moving into commercial market, but without the government lead, I doubt we'd have nearly the communications capability that we currently have.

The federal deficit is enormous; so is the imbalance of trade. I would probably start (and get promptly voted out of the White House LOL) with getting some experts and deciding and a good gasoline rationing plan (not the odd/even stuff from the 70s).

Allow so many gallons per licensed driver in a household (no, you don't get more because you have a truck, SUV, RV, two Jaguars and three motorcycles), plus some additional for school age children. Take the numbers and come up with a limit to reduce oil consumption by 10%. Each year, reduce it a bit more. Some folks wouldn't use their allotment, and they'd be entitled to turn it into an "open" account. They would receive cash equal to the unpurchased gasoline. Anyone who wishes could purchase gasoline credits from that account. The government would, of course, tack on about a 50% tax, both to pay for this rationing plus bring a few extra dollars into the treasury.

Over a few years, folks would be looking once again for fuel efficient vehicles. If someone really wants to buy a Dodge Viper with a 500 horsepower 10 cylinder engine, they could. They could also expect to be purchasing from that fund of unused gas rations (with the extra surcharge). However, if we could reduce our dependence on foreign oil by 25 or 30 percent, we'd be in better shape (both in the trade balance department as well as in better shape in case of an oil embargo).

Let us not kid ourselves, however. Currently, I believe we only produce 25% of the oil we consume. I think it was a bit more than 50% back in the days of the oil embargo.

This might be a reasonable place to start.

73 from Rochester, NY
Jim AA2QA
ps - not going to start with the FCC auctioning of spectrum. That is crazy enough, but doesn't help the foreign trade deficit.

Valid point! OTOH, do we really have a "free market" at all?

Consider transportation - the airlines didn't build the airports, or the air
traffic control system, or the weather service that reports on conditions at
flying altitudes. Nor did the bus and trucking industries build the interstates
or the bridges and tunnels. Construction of significant parts of the railroad
system was not funded by the railroads, nor were the canals and river systems.

>The federal deficit is enormous; so is the imbalance of trade. I would
>probably start (and get promptly voted out of the White House LOL) with

You have identified two of our biggest problems: dependence on imported
petroleum products and the trade deficit.

>Allow so many gallons per licensed driver in a household (no, you don't get

>However, if we could reduce our dependence on foreign oil by 25 or 30
>percent, we'd be in better shape (both in the trade balance department as

>well as in better shape in case of an oil embargo).

I agree with the goal but not the method. The problem, as I see it, is that there would be too many ways around the system for some people, and it would be too bureaucratic. But the goal is right.

The Europeans and Japanese control oil consumption by taxing the fuel at the pump, and then using the taxes to fund energy-efficient alternatives to the private auto. That's why their transit systems are so pervasive and so popular: they don't expect transit to make money or even pay for itself.

The big questions are: how to reduce consumption without serious negative economic effects on industries like agriculture? And how do we make the changes permanent?

In a larger sense, overall energy policy needs to change. Which isn't going to be popular, because it influences our way of life in all sorts of ways - more fuel-efficient cars, less driving, more transit, more fuel-efficient homes and businesses, living in denser communities with sidewalks and town centers rather than in sprawl.

This isn't primarily a technological problem, it's an attitude and policy problem. Gasoline is actually so inexpensive in the USA that it 'doesn't pay' to conserve it. Example: Suppose you drive 15,000 miles a year. If you drive a vehicle that gets 15 mpg, and you pay $2/gallon, your annual fuel cost is $2000. A vehicle that gets 30 mpg saves you half that, but it's only $1000 a year - less than $20/week. A 45 mpg vehicle saves you only $333 more. While these costs aren't small, they are only a small part of the total cost of a vehicle, when you look at car prices, insurance, repair/maintenance, etc. Plus when you look at the effect of inflation, $2/gal gasoline today is less expensive in inflation-adjusted dollars than $1/gal ~20 years ago.

Shrub talks about hydrogen power but doesn't explain where all the hydrogen is supposed to come from. US carmakers push, and US drivers buy, SUVs rather than cars, and the govt. reinforces the sales by classifying SUVs as "trucks".

>Let us not kid ourselves, however. Currently, I believe we only produce 25%
>of the oil we consume. I think it was a bit more than 50% back in the days
>of the oil embargo.

From what I've read recently, back in the '70s we imported one-third and produced two-thirds. Today it's the other way around.

It should be remembered that a lot of our imported oil comes from places like Canada, Mexico and Nigeria, and not from the Middle East. The significance of Middle East oil is two fold:

1) Oil companies are multinational, and aren't going to freeze, strand and starve Western Europe so Americans can drive SUVs.

2) The big producers like SA have enormous influence on price.
>
>This might be a reasonable place to start.

Yep. But it's not popular.

>73 from Rochester, NY
>Jim AA2QA
>ps - not going to start with the FCC auctioning of spectrum. That is crazy

It's an important point when any disagreement with or criticism of Our President is considered unpatriotic and possibly even treasonous.

>>>This nation has bandied-about it's "Don't Tread On Me" attitude
>>>for since the fifties yet has gotten into the practice of tucking tail and
>>>running when it get's slapped around a little bit.
>>
>>What *are* you talking about?

>>
>>Did this nation "tuck tail and run" from Korea?
>
>Yep.

Then what are all those troops there for?

>We pushed the Koreans back to the Yalu and then let the Red
>Chinese push us back. We then pushed THEM back again and started the
>"appeasement game".

A lot of us don't see it that way. You might consider the history of Korea
before 1950 to get the big picture.

>>Vietnam?

> What form of government is in charge of Viet Nam today?

One that our country is pretty friendly with.

>Our goverment, NOT the Armed Forces, gave up on Viet Nam.

The Armed Forces don't make policy. And who was in office when that giving up
happened?

It's important to look at the history of Vietnam:

Before WW2, it was a French "colony". But the French could not defend Vietnam
from the Japanese, and during the war Japan controlled Vietnam. There was a
resistance movement during WW2, opposing the Japanese invaders.

Vietnam was not liberated by Allied forces during WW2. After the war, the
resistance movement folks and many other Vietnamese wanted an independent
Vietnam. Their leader, one Ho Chi Minh, saw himself as the Vietnamese
equivalent of George Washington and even approached the USA for support. But
the USA and others supported simply giving Vietnam back to France, not caring
what the Vietnamese people wanted at all. The policy was that independence was
OK for British colonies in 1776 but not OK for French colonies in 1946.

So the resistance movement became an independence movement, and went elsewhere
for help. Spurred on by the success of Algerian independence, they managed to
push out the French in 1953. But the UN imposed an artificial division of the
country, which the North Vietnamese simply ignored.

The USA and others got involved in large part to counteract the supposed
"domino effect", "preventing communist expansion" that would supposedly spread
all over the world. Yet when the US left and the South Vietnamese government
collapsed, Vietnam did not become a takeoff point for further communist
expansion.

While the US originally sent "advisors", LBJ expanded the war into a much
larger conflict - based supposedly on the Gulf of Tonkin incident.

How many Vietnamese civilians died or were injured in the war? Were all of
their deaths justified? Was there no other way to handle the situation? Is it

possible that LBJ made a mistake?
>
>>Western Europe?
>
> Due solely to the tenacity of Ronald Regan.

Nonsense! What about Truman, Eisenhower, Kennedy, LBJ, Nixon, Ford and Carter? Did they simply let the Soviets do whatever they wanted?

>>Kuwait?
>
>Due solely to the determination of Bush the Elder.

More nonsense. Kuwait was the direct result of Reagan and Bush supporting SH's Iraq as a way to get back at Iran and the Soviets - regardless of what else SH did.

>And had he done the
>job right the first time, Bush Junior would not have had to go back in.

I used to think that way too. But when interviewed on that very question, Papa Bush and many others in his administration pointed out what a mess would result if they had pushed on to Bagdad and toppled SH. Their predictions have all come true.

>>>We finally have a President who slapped back.

>>Did he slap the right people?
>
>So we should have waited around for another 10 years of Al-Queda atttacks
>to figure it out?

Did he slap the right people or not?

>>There is currently *no* evidence that the SH regime had anything to do with
>>any
>>terror attacks. Nor is there any evidence of "weapons of mass destruction"
>>in that country.
>
> Iraq is not the only page of the story.

It's the place where hundreds of billions of dollars and more than a thousand US lives have been spent.

>>Afghanistan is a different story. Yet the masterminds of the 911 attacks
>>were
>>allowed to escape from that country, by the very administration you admire
>>so much.

>Robeson K4YZ) writes:

>>Yep.
>
>Then what are all those troops there for?

Show. We lost the chance to fix the problem in 53. It's a stalemate at
best.

>>We pushed the Koreans back to the Yalu and then let the Red
>>Chinese push us back. We then pushed THEM back again and started the
>>"appeasement game".
>
>A lot of us don't see it that way. You might consider the history of Korea
>before 1950 to get the big picture.

I know the story, Jim.

It's the same one in Vietnam. Only we fared just slightly better in
Korea.

(Korean history lesson snipped...But thatnks...)

>> Due solely to the tenacity of Ronald Regan.
>
>Nonsense! What about Truman, Eisenhower, Kennedy, LBJ, Nixon, Ford and
>Carter?
>Did they simply let the Soviets do whatever they wanted?

They kept them guessing, at best.

The USSR was as big, powerful and dangerous as it ever was in 1980. By
1991 it was in ruins.

>>>Kuwait?
>>
>>Due solely to the determination of Bush the Elder.
>
>More nonsense. Kuwait was the direct result of Reagan and Bush supporting
>SH's

>Iraq as a way to get back at Iran and the Soviets - regardless of what else
>SH
>did.
>
>>And had he done the
>>job right the first time, Bush Junior would not have had to go back in.
>
>I used to think that way too. But when interviewed on that very question,
>Papa
>Bush and many others in his administration pointed out what a mess would
>result
>if they had pushed on to Bagdad and toppled SH. Their predictions have all
>come
>true.

They came true NOW. I seriously doubt the same results would have occured
with over 1/2 million US troops in-theater, and a grossly humiliated SH trying
to explain why "just yesterday" he was telling his people how he was defeating
America, but now their on the front doorstep.

The Kurds were ready to mount a serious civil uprising, and indeed tried
it, only to be butchered becasue we wouldn't back them up.

>>>>We finally have a President who slapped back.
>
>>>Did he slap the right people?
>>
>>So we should have waited around for another 10 years of Al-Queda atttacks
>>to figure it out?
>
>Did he slap the right people or not?

I say yes, although the list is not yet fulfilled.

>>>There is currently *no* evidence that the SH regime had anything to do with
>>>any
>>>terror attacks. Nor is there any evidence of "weapons of mass destruction"
>>>in that country.
>>
>> Iraq is not the only page of the story.
>
>It's the place where hundreds of billions of dollars and more than a thousand
>US lives have been spent.

We spent billions of dollars and hundreds of thousands of lives in
Europe...Now we get spit on by them. So what?

>>>Afghanistan is a different story. Yet the masterminds of the 911 attacks
>>>were
>>>allowed to escape from that country, by the very administration you admire
>>>so much.
>>

>> I hardly think they were "allowed" to escape.
>
>They were not prevented when we had the chance.

Proof, James. "Not prevented" suggests that we knowingly allowed them to
get by.

>I disagree.

You would. I could say the sky is blue this morning and you'd get into an
argument based on measured Angstroms as to whether it was blue or not.

>> And I ask you to show where I suggested it was IL-legal, Jim...
>
>Supporting terrorism is illegal.

But Hans obviously did. He expressed public disdain for government plans
to interrupt GPS service in the face of an attack, and verbalized a derrogatory
diminutive for the President in a time of war.

>>>>and obvious disdain for a
>>>>policy that is intended to deny potential adversaries the opportunity to
>>>>use
>>>>our own systems against us speaks for itself.
>>>
>>>It says he disagrees with the policy. Nothing more.
>>
>> He ran his mouth off in an attempt to humiliate the President.

>
>Is that wrong? This President is arrogant, Self-righteous and way too full of
>himself.

Funny...I hear that same sentiment comong from Liberals who are rushing to
Spin Control.

I heard the SAME thing about a former democrat president caught lying over
and over in sworn depositions.

>When questioned about mistakes made during his first term, he
>couldn't
>think of any except perhaps a few people he appointed. Talk about passing the
>buck!

>> The content of the article said absolutely nothing new, and the
>"policy"
>>cited was from plans made over 10 years ago.
>
>Good point!
>>
>>>Shutting down GPS may cause more problems than it solves. That's a fact.
>>>
>>>> Hans is an idiot and an Al-Queda supporter.
>>>
>>>That's just plain bullshit. No other word for it.
>>
>> What's with all the college educated engineers and "professionals" who
>>can't seem to express themselves without profanity, Jim...???
>>
>> You too?
>
>"Sometimes the pool-pah exceeds our ability to comment".
>
>"Bullshit" was the right word. If Cheney can tell a reporter to "@#$% off",
>what's the problem?

It was wrong for him too...

I just thought you more apt and able to express yourself without it, Jim.

Guess I have to admit I was wrong about that. And that's one admission of
error I truly dislike having to make.

My bad.

I snipped the rest. After having gotten to this point, I guess I just
lost any interest in wading through the rest. Why bother?

Seems we'd have learned our lesson! But nooooooooooooo, Shrub-Condi-Rummy make up a big lie about WMD's, convince Colin Powell to swear it's a fact, and get us bogged down for "many years" (their words, not mine). We should have dispatched SH and walked away.

It's easy to declare a war if you aren't personally required to attend.

Good Morning,
Just looking through the Dec. QST and looking at some of the special events and contests. As I have never done a contest, I am lost. I am interested in the cw side of the lighthouse event but don't know what a "serial number" is that they want as part of the QSO. I am also unfamiliar with the etiquette of contesting. Also, I am only sending and receiving 15wpm so I can't keep up with half of the OM (and OL) that are sending so I can't figure out what the etiquette is that way. I really would like to participate in these events as practice makes perfect, but do not want to step on anyone's toes.

As always thanks for the suggestions!

G. Doughty

N2EY doesn't mind at all. Gives him an excuse for not answering the hard questions.

With respect to GPS, it is not a "free market." The Department of Defense developed it. One of the capabilities built in is Selective Availability which injects an error into the unencrypted signals. This is so that the military can continue to use it, and deny the best accuracy to an enemy on the battlefield. Another capability is to encrypt the signal, and turn off the unencrypted signal denying access to an enemy on the battlefield. No free market about it. now we've got Hans saying "It's my right, It's my right to have free access to a DoD weapons system!"

Boo, hoo, hoo.

> Jim, what are the right problems to focus on? Who is the right enemy?

So you answered for N2EY that the trade deficit caused by petroleum imports is the enemy and the problem that we should focus on.

OK. I don't disagree.

But all we heard from Kerry and the mainstream media during the election was that "Shrub" hasn't paid enough attention to domestic problems.

So "Shrub" has decided to focus on Social Security.

I spent all last evening watching PBS (an incestual twin to NPR) tear down "Shrub's" proposals. Shrub is going to cut benefits. Shrub is going to deny benefits until recipients attain an older age. Shrub is going to reduce benefits to the wealthy. Shrub shrub shrub...

Boo hoo hoo.

If I'm not mistaken, Social Security has implemented delays for benefits to people in my age bracket and younger. This was done during a Democrat controlled congress.

If I'm not mistaken, Social Security benefits became taxable income during a Democratic controlled congress. That sounds like a reduction in benefits to me.

If I'm not mistaken, one of the core beliefs of the left is the redistribution of wealth, "To each according to their needs, From each according to their ability."

So Shrub heard the complaints that he wasn't doing enough on the Domestic front, heard Alan Greenspan say that Social Security reform was the most pressing problem, and now he's looking at it.

Then the Democrats turn on their core beliefs because the "wrong" person is taking them in the direction that they wanted to go.

I'm still waiting for N2EY to list his grievances with the current administration:

> Jim, what are the right problems to focus on? Who is the right enemy?

Thanks, bb

Yup, I sure did!

But I'm just following your lead, Steve. Only difference is that in your case the President was "Slick Willy" and the war was in Bosnia.

Shrub/Iraq or Slick Willy/Bosnia. No difference.

dit dit

G, lighthouses sound like fun, and you already have all of the serial numbers you'll need in your pocket. When you contact your first lighthouse, you give them serial number 1. When you contact your second lighthouse, you give them serial number 2..., etc.

As far as speed goes, Morsemen are kindest and most helpfullest amateurs of all. If they forget to match the speed that they were called at, you could send to them "QRS" and they will get the hint.
Best of Luck, bb

Hi Shipmate, Jump in, the water is fine, and don't worry about anyone's toes.

Each contest differs in it's objectives and rules, but they all follow the general pattern of trying to contact as many of the target stations as possible (in this case stations at Lighthouses). A "serial number" is just a sequential number which you assign to each contact..... your first contact is #1, second is #2, etc.

There are a lot of resources on the web to learn contesting, to get logging programs, participate in reflectors, etc. One of the best places to start might be http://www.contesting.com --- from there you'll find a host of links other sites. Go to http://lists.contesting.com/mailman/listinfo/CQ-Contest and subscribe to the CQ-Contest email reflector. It's the largest in the world, and your questions on any conceivable radiosport subject will be answered.

Thanks for the input folks. pretty cool. I am currently using aclog 2.6. Would I need to start a new log for the contest or just send the lighthouse contacts I made? I have so many questions. When contesting cw, when you send CQ, is it followed by "contest" like on SSB or / something? I didn't see that on any of the contests I saw in the magazine.

Thanks again

Contesting is an art. Very difficult to explain in written form or even video.
You might contact a local contester who will tutor you. Or let you observe the drill.
Check for contest clubs or DX clubs in ur area -- see URL:
http://ac6v.com/clubs.htm

Here in So Cal we have a contest station who does this and has successfully trained a dozen or so folks.

Also a great way to jump in is to go to a local club field day -- they are always willing to help and get you into the field day contesting.

Be aware you don't have to submit logs and "be in the contest" to participate. Contest stations will welcome ur contact as they are after max contacts. Also in the waning hours of a contest, many big contest stations are calling CQ test and no one answers (maybe worked most) so this is a good time to call em.

For CW it is best to call stations. If you call CQ CQ TEST -- many will come back at high speed. So until you get your speed up be the "callee" not the "callor"

If you do call CQ in CW and can't copy -- send QRS (slow down) either they will or if they are in a hurry -- will just go away (;-)
Really not a good idea as many want quick contacts which are essential to those who will submit logs.

There are computer pileup trainers -- See URL:
http://ac6v.com/morseprograms.htm#PT

There are some books that cover contesting -- use Google
type in "CW contesting"

Jump in -- fun and completive or both
As they say -- Good Luck In The Contest.

Contest calendar and rules - reports etc -- see URL:
http://home.online.no/~janalme/hammain.html
Several coming up in January

Quote "covering over 200 events! And you don't need a sophisticated calulator to figure out that this means an average of 4.0 per weekend"

There are no contests on 30M, 17M, and 12M

Hallelujah Jim...I wholeheartedly agree where our current President is concerned. He's a back-street punk born with a silver spoon in his mouth.

I would also point out the ludicracy of any one of us accusing the other of being an Al-Quaeda supporter, a supporter of terrorism, an anti-American, or whatever "cutsey" term has popped up from all this crap that is now going on in this country. I am appalled, and moreover cannot fathom that it has gotten to that in this country. Osama Bin Laden wins EVERY TIME we, as United States citizens, let ourselves be like that. Of course, Osama Bin Laden won this war long ago.

Generally they will slow down to the speed at which you contact them. If
they do not, send QRS. If 15wpm is your comfort speed, you can even send
QRS 15 so they know what you need.

Dispatched? When?

I seem to recall that being told that the Iraqis would welcome Allied troops the same way the Parisians did. Didn't quite work out that way.

>It's easy to declare a war if you aren't personally required to attend.

Well, let's see....

John Kerry actually fought in Vietnam, Shrub used his connections to serve in the National Guard....when he bothered to show up. Bill Clinton went to college abroad to avoid the draft, Reagan made movies during WW2, Papa Bush lied about his age to get *into* the Navy. A mixed bag at best.

Did Dick Cheney ever serve in the military, let alone see combat? Donald Rumsfeld? Ms. Rice? IIRC, the answers are no, no, and no. But they give the orders and make the policies. Colin Powell did but he's out, persona-non-grata 'cause he didn't really think invading Iraq was such a hot idea.

Interesting.

What are the chances the draft will be reinstated? If it is, will Shrub's daughters be drafted? One guess....

But you called him "Slick Willy" back when he was.
>
> And had Bill Clinton acted aggessively enough in his eight years in
>office, we may have never had "9/11". THAT is fact.

Of course it is. Hindsight is always 20-20. But consider this:

The only reason there were Gulf Wars I and II in the first place was because of bad Mr. SH. Who was *supported* by Presidents Reagan and Bush I until he went after Kuwait. Had they not been so buddy-buddy with him, neither war would have been necessary. That's a fact.

Or this:

Afghanistan was a Soviet puppet/buffer state for many years before Soviet troops went in there - at the *request* of the Kabul govt. Through the CIA, the Reagan and Bush I administrations supported Afghan rebels, supplying them with arms, supplies, information, and most of all training. A blind eye was turned to what the Afghan "freedom fighters" did to captured Soviets. Afghanistan became the Soviet's equivalent of Vietnam, except it cost them more lives and it was on their border, not 10,000 miles away.

An interesting difference of the Afghan/Soviet conflict was that a lot of the "freedom fighters" weren't Afghans at all, but foreigners who'd been bored or out of place in their birthplaces across the Persian Gulf and who wanted to help out. Among them was a young man from a wealthy family in SA.....

Eventually the Soviets gave up and the puppet government crumbled. There was anarchy for a while, and then a regime took over that was in almost every way

worse than the Soviet puppet regime had ever been. Again a blind eye was turned, because we'd backed those people.

Then came the invasion of Kuwait. A good number of those "freedom fighters" turned up in SA, looking to help out. They were appalled at the enormous number of infidels in their sacred land, and insulted that outsiders were coming in to settle what they thought should be a regional dispute. That same young man offered to lead the way into Kuwait with his buddies, months before the Allied forces were ready. He wasn't even allowed to try, because of course the Iraqis would have chopped them all up.

Then Kuwait was freed, the invaders routed, oil well fires put out - and the infidels got most of the credit, since they'd done most of the fighting. And the infidels didn't leave the sacred land.

Only then did the young man (with initials OBL) plan to attack the infidels in *their* land...

It doesn't take a lot of imagination to see how many ways the 9/11 attacks could have been avoided if the Reagan and Bush administrations had acted differently.

Well, a slight difference...

Bosnia was more of a UN effort IIRC. And on a much smaller scale. Still, it had that "wag the dog" flavor to it.

Don't look for any investigations into corruption in the government until at least 2009 - when George Bush is out of office. BTW, with accusations flying about news media being either "left" or "right" oriented, I've bookmarked some news organizations in Australia and England. Interesting stuff. Of course, we may well find our ISPs start blocking these sites for some "unknown" reason too LOL

Did you get a load of the prizes he gave out to some folks who screwed up royally with this Iraqi mess?

Best regards from Rochester, NY

Yup, there's lies about blow jobs, and there's lies about other stuff.

Question: Why did Cheney keep saying Saddam had nukes when intelligence agencies were advising him otherwise?

Question: Why did Bush say Saddam was trying to buy uranium in Africa when the claim had been discarded as a hoax?

Question: Why did Rumsfeld say Saddam was in cahoots with al Qaeda but the administration-appointed commission asserted that "We have no credible evidence that Iraq and al Qaeda cooperated on attacks against the United States."?

Question: Why did Rice say the aluminum tubes could only be used for nukes when intelligence agencies had decided otherwise?

Question: Why did Bush say that Saddam's UAVs could hit the US when they had an air range of 300 miles?

Yup, there's lies, and then there's LIES!

dit dit,

These are the numbers of amateur licenses held by individuals on the
stated dates:

As of May 14, 2000:

Novice - 49,329
Technician - 205,394
Technician Plus - 128,860
General - 112,677
Advanced - 99,782
Extra - 78,750

Total Tech/TechPlus - 334,254

Total all classes - 674,792

As of December 14, 2004:

Novice - 29,829 (decrease of 19,500)
Technician - 265,134 (increase of 59,740)
Technician Plus - 54,449 (decrease of 74,411)
General - 138,280 (increase of 25,603)
Advanced - 78,024 (decrease of 21,758)
Extra - 106,019 (increase of 27,269)

Total Tech/TechPlus - 319,633 (decrease of 14,621)
Total all classes - 671,785 (decrease of 3,007)

FYI: My research shows:
Before 1912, call signs were just made up by the aspiring Amateur and it wasn't until the Radio Act of 1912 that the first licenses were issued. An HTML version of Early Radio Laws 4 is on-line. Very interesting reading as it defines DE, CQ, Operating Procedures, Morse Code of the day, and many Q Signals we still use. In 1911, Hiram Percy Maxim's assumed call was SNY. In 1912, Irving Vermilya, 1ZE, 6 received Skill Certificate No. 1, thus considered as the first licensed Amateur Radio Operator. Some sources indicate the code requirement was 5 wpm (how things go around and come around - 5 wpm now in the year 2000!!!). Written exams included essay type questions -- making a diagram of transmitting and receiving apparatus and how they worked! Also of course International and US Law questions.

While you're at it, make a note of the frequencies of Radio Australia
and the BBC. I can easily receive Radio Australia here in California,
but I don't know how well it comes in back east. You might try their
morning freqs of 5995 and 7240 (the latter having some US ham QRM).
>
> Did you get a load of the prizes he gave out to some folks who screwed up

The BBC had an interesting take on that. They interviewed some woman
from an antiwar group in the US who noted that those three guys should
be being tried for war crimes, not given awards. You might also try
Radio Havana for a different slant on Iraq. It seems to me that lately
they've toned down the "evil imperialist capitalist" rhetoric.

Sorry, Hans.

President Clinton did not stand up in front of the American people and
state "we are in a state of war".

Steve, K4YZ

>
>Agreed. Which is why public policy should support such things.

So...radio amateurs in the USA must continue to test for morse
code ability because it was the first ever communications mode in
radio?

Of course. Without that morse code test we would live in a
dictatorship, ruled by nastypeople.

<snip>

>>>Perhaps we should ground all nongovernment aircraft bigger than a certain
>>>size,

>>will do.
>>
>Apply that to the GPS situation.

Does one have to include a morse code test for a GPS license?

:-)

It's amazing how the grant of an amateur radio license makes everyone an absolute EXPERT on socio-political questions of the day, especially those who've never ever served in their country's military nor done any communications other than amateur radio.

Powerful stuff that morse code. Pass one code test and one is a major player on foreign policy and what ails human beans. :-)

>DoD weapons system!"
>
>Boo, hoo, hoo.

Perhaps the excuse for whining is that the USN began the
development of GPSS under the original NAVSTAR project
acronym? [Hans was a USN super chief] :-)

I was representing RCA at NAS Warminster when NADC was
in its second year of NAVSTAR test flights. One of the test
bed aircraft was an RA-2, shared among two other projects, one
of which was SECANT developed by RCA. [circa 1971-1972]

All of that eyewitness experience is "no good" in here since all
expertise in anything is granted to any Amateur Extra that
knows, loves, and cherishes morse code.

>> Jim, what are the right problems to focus on? Who is the right enemy?

> Lessee, if he was around back then..... He would probably have been
>a civil war vet.

"He" was actually a Korean War veteran, serving actively from 1952 to 1956.

When did Coslo ever serve in ANY military?

> And he would have been a member of the Military telegraph service.
>Could tell all those radio Ops about real telagraphy.....

For its time, that would be true...but that is supposition by the Avenging
Angle, the hero of "seven hostile actions" along with his lil buddy,
the Amateur Balloonist.

The U.S. Army Signal Corps ran the land force military telegraphy
"service" plus a lot of other communications tasks in the Army. I was
in the Signal Corps, United States Army.

The Morse-Vail Telegraph System debuted in 1844, Baltimore to Washington
DC. The U.S. Civil War did not start until 1861, seventeen years later.
There
was NO "radio" communications until 1896, 52 years after the first Morse-
Vail Telegraph service opened.

> hehe, I like that!

Coslo has never served in any military. In fact, he has NOT served in ANY
"radio operator" capacity other than as an AMATEUR, a hobbyist, a
dilletante in the communications world making big noises like he was an
"operator" of high caliber. "High caliber?" No, not even shooting blanks.

It's worse with the Avenging Angle, that obtuse angle (never right), who never worked any military communications and couldn't even make it to military pilot despite having (allegedly) a private pilot's license since before his military service. Wow, talk about losers!

Tsk, tsk. I'm not going to tell you anything about the U.S. Civil War despite my late father-in-law's personal study of it nor my own reading of the official histories of the U.S. Army Signal Corps written by the U.S. Army Times, nor of official documents written by Signalmen of the U.S. Army in other official and recognized documents. Do not worry. Depend on the publishers at Newington to tell you ALL about "radio" (at least that much they care to tell you).

You don't have to pay any attention to REAL radio operators and maintainers who were in REAL HF worldwide communications as I was a half century ago...nor of those government and private sector radio operations where I was also in the following half century. All you need to know is what Newington cares to tell you and, above all else, love honor and cherish morse code, that imaginary paragon of "radio operating skill" among AMATEURS.

Keep all those wonderful skills and operating standards of amateurism alive and well long past their usefulness so that you will finally be part of an "in group" of morsemen. Be ready for that "big one" where you can brag about saving the world through morsemanship.

Now, one last time, how do you "serve" your country in those "other ways" you claim? Neither you nor the Nun of the Above have answered that question challenge on your respective claims...

did dit

All I have to say at this point is if you dont like Dave Made Fine but if it is because you have to wait for it your childish.

This is a ture story I know a guy that wanted a dave made 32 pill but got sick of waiting and bought a no name 32.
Im Waiting now for a Dave Made 32 pill I Admit I would like to have it now but i know When I get it I am going to stomp all over the No-Name, not just because they are better boxes but as im waiting for my 32 im setting up my car. Making sure everything is well grounded, tuned, and what not. The guy with the no name 32 is running it off of one alternator. I took the time and saved up and bought three big leece-neviles AND YOU KNOW WHAT IT TOOK 2 WEEKS FOR THEM TO BE SHIPPED TO ME. But it beats buying them from some one that has them in stock and charges an extra $100.00

Prozac625 is off the key.

Please, no "corrections" of the Nun of the Above. He won't have that.

All statements of U.S. history and foreign policy are CORRECT
if made by an Amateur Extra licensee having passed a 20 WPM
morse test. All others are WRONG.

BTW, Independence came to Algeria on July 5, 1962. [Arab groups
had wanted France out ever since they took over in 1830]

Everyone now has to return to the Expert guruisms of the resident
amateur Extras wherein important matters of amateur radio policy
are discussed as world socio-politico matters.

Suffice it to say that I do, and that I only mention it since you find it important that I was not a member of the uniformed services. It is your gauge, not mine.

Pains me to say it Brian, but on one issue Steve is precisely right --- the part where he says you're a lying sack of crap.

Hans never said anything even remotely resembling that.

What he >>did<< say is that shutting it down is an exceptionally stupid idea, akin to cutting off your nose to spite your face. Nothing in there about any individual "right to have free access".

Sunuvagun!

Good luck on this one now!

Right you are, Phil!

Thanks for the correction. Somehow I got the British Empire breakup (India, South Africa, what they called Palestine, etc.) confused with the French loss of colonies. If anything, the Algerians were encouraged by the Vietnamese success rather than the other way around.

--

In any event, the point I was making was that the Vietnamese simply wanted independence, and when the Western powers refused them, they turned to the Soviets for help. And the Soviets were only too eager to help out.

One wonders what would have happened if the USA and others had not supported France. After all, if the Vietnamese people really wanted independence, why should they remain a French colony - particularly when the French had not been able to protect them from the Japanese during WW2?

Just listen around to see how others are doing it. Then answer others'
CQs and tune around. In time you'll get it and then find an empty
frequency and have at it.

You could run a tape machine to record the contacts so if
you did miss something just replay it later.

On phone
contests I'll answer a contester CQ with my callsign,
he repeats it, then gives me a report of some sort, and
serial numbers or whatever. Then I say "Your 59 in NNJ,
your number is 007". Then he then proceeds to the next
contact. That's when I get his callsign to write it in
the log. I don't compete, but I like contests for a
steady supply of quick QSOs to see how far my signal
goes...

No luck needed at all, Brian.

I never said he "cannot turn off the GPS".

After all, he's in charge and has wide lattitude to do pretty much whatever he decides to, including some stupid things. This would be one of those stupid things. Par for the course, like his stupid notion of turning SS over to Wall Street.

dit dit,

de Hans, K0HB

I think the U.S.A should follow the Switzerland model of compulsary military service for all males who are fit to serve. Two years of active service followed by a lifetime of reserve service. Then everyone can tell war stories.

It fits with the current theme of celebrating diversity and being inclusive.

Scariest part is - he was serious.

>
>Hallelujah Jim...I wholeheartedly agree where our current President is
>concerned. He's a back-street punk born with a silver spoon in his mouth.

Never thought of it that way, Kim, but you do have a point.

>I would also point out the ludicracy of any one of us accusing the other of
>being an Al-Quaeda supporter, a supporter of terrorism, an anti-American, or
>whatever "cutsey" term has popped up from all this crap that is now going on
>in this country.

Perhaps we need a rewrite of Godwin's law on that...

>I am appalled, and moreover cannot fathom that it has
>gotten to that in this country.

It's called "fear" and "polarization".

Basically it comes down to folks wanting to oversimplify complex problems into
simple "it's those bad guys over there!" situations.

>Osama Bin Laden wins EVERY TIME we, as
>United States citizens, let ourselves be like that. Of course, Osama Bin
>Laden won this war long ago.

I think it depends on what you mean by winning. But consider this:

- One of the things that most incensed the AQ and OBL was the presence of so
many infidels, particularly soldiers, in their sacred land. Even after Gulf War
1 was over, many of them stayed in SA. But after 9-11, almost all of them were
moved to other bases, outside that country. While Gulf War 1 was staged from
there, Gulf War II wasn't. There may still be a few still stationed in SA, but
they're training SA troops only.

- In some ways SH was a unique leader in that part of the world. While nominally a Muslim, he operated in a secular manner, giving little heed to what clerics said. He allowed Christians and even Jews to live in his country, and had at least one Christian as a trusted, close advisor. His loyalites were based more on ethnicity and ideology than religion. Because of all this, OBL & Co. detested him almost as much as the foreigners, and wanted him out of power. And for the same reasons, SH would never aid any terror folks. So when the foreign infidels toppled SH, they helped OBL achieve a goal. Now that country has become a recruiting and training ground for insurgent groups....

---

btw, Kim, I was taken aback by your use of the word "ludicracy" because there's no such word in any of the dictionaries I have. They do have the word "ludicrousness", which I thought is what you meant - at first.

But upon some reflection, it occurred to me that you've invented a new word that is sorely needed. I see "ludicracy" being a combination of "ludicrousness" and "lunacy", meaning something that is not only ridiculous but also crazy. Which fits your use of the word perfectly.

Steve, the "stupid idea" is a GPS design feature.

And as far as SS goes, Wall Streeters are already involved in the Federal Employees Retirement System, virtually every State Employees Retirement System, Teachers Retirement Systems, 401Ks, and IRAs.

Wall Street is how these retirement systems can fund such mundane stuff as cost of living increases to their recipients. All baad, baaad stuff.

There can be good reason to focus on people. Currently, our city (Rochester, NY), is considered under-funded by 40,000,000 to the school system by the state. The figure was arrived at by taking total NYS aid to education and figuring the taxable value of property in the various school districts.

A lawsuit finally determined that NYS counting each pupil in New York City as 7/10ths of a pupil was unconstitutional and they would have to refigure their calculations or the court would do it for them.

The state did not refigure, with good reason. The suit was over New York City and the stated didn't want to have to deal with Rochester, Buffalo, Syracuse, nor a few other larger cities.

It is difficult to educate children when they sometimes have to wear their winter coats in the classrooms. When they can't take books home to study as there are not enough books to go around (you leave your book in the classroom for the next class). The few computers you may have don't work.

Meanwhile, they received a loan from the state and borrowing a part of it is being blocked until all the books are audited. Meanwhile, the city had no problem finding $40,000,000.00 in loans to buy a defunct fast ferry. No problem building a new soccer stadium (to be completed next year). No problem building a baseball stadium (which is still being partially funded with taxpayer money). But no money for kids. Rome build all of those stadiums to amuse its' citizens - and fell apart not too far later.

What is wrong with this picture?

You are right about the Democrats taxing (not all, only some and then based upon income) Social Security. They at least had a balanced budget.

When this fiasco is over and the country is nearly in ruins, taxes will, unfortunately, *have* to rise for most - especially for the wealthy for whom tax rates are quite low. At that point, the debt servicing will probably eat most of the budget and there will be no way out. All so a few (like the CEO of Global Crossings who bankrupted the business whilst cleaning out employees' retirement accounts and ruining stockholders investments) can pay little or nothing. That CEO had to pay $55,000,000.00 in a fine. That was all. He made $770,000,000.00 with his little racket. Probably he'll only pay 15% capital gains. Nice nest egg and little tax for ruining so many folks.

I have pretty much given up trying to argue with the religious right on this. When I pointed out a few quotes from the Bible to a few, I was accused of *heresy*. In other words, pointing out that Bush is not in accordance with some parts of the Bible causes folks to accuse one of heresy. I can only suppose that some folks want Bush elected as pope.

I am scared of the religious right - this includes the fanatic Muslims as well as the fanatic Christians. I pointed that out once and mentioned Armageddon.

The answer? Well, if it is to be, it is to be. After all, it's in the Bible.

To these we entrust the buttons that can start a nuclear war? Of course, maybe those folks that could start the war who were just awarded the medal of freedom may simply play golf with Bush during the next war.

Best regards from Rochester, NY

Hello, Hans

Just so some might appreciate the problem with "privatization", New York State started a deal where you could invest money to be used for your kids' education. Not a savings account; this had to be "invested". They had a nice thing going.

A lot of ordinary folks jumped right on the bandwagon. After the company I worked for stopped their "fund d" and everything became chance.

Wow! The stock market was really rising! (yep, like a pyramid, you get a lot of folks to invest, stocks go up). Over time, of course, stock tends to go up, but a lot of new accounts ... a few of the guys at work were bragging

how many grand they made "last month". One guy (from Vietnam) took a hard look and bailed out and moved it all into low producing accounts. Needless to say, the tech stocks tanked, just about everyone investing in that New York State thing lost a good portion of what they invested .... and if you check, you find some folks (especially the folks that knew what was happening) bailed. Some did very well (perhaps illegally), some did well just not to loose anything (like the guy at work I mentioned earlier). And a lot more ordinary folk lost.

Why has gambling become the method of choice for making money? Everyone around here wants more gambling. Creates jobs.

As to the stock market, it is like walking into a poker game. If you can't spot the fish, guess what?

Best regards from Rochester, NY
Jim AA2QA

Let's hope they are right.

I would like broadband, but not at the expense of HF. I have no real expectation of either DSL or cable Internet ever being available on this side of our street as long as we are the only house on this side, but BPL would doubtless wipe out HF, as the power lines run across the front of our lot.

A friend suggested that we should try linking into our neighbour's wireless LAN on the other side of the road to piggyback onto their broadband. It just might work, too. We would do it with their consent, of course (the neighbour, not their ISP!).

That was a short sighted idea. With Education at constant double digit inflation, there were no investment plans that could ever keep up, once the investment people skimmed off their money. This means someone loses at some point. Guess who?

> A lot of ordinary folks jumped right on the bandwagon. After the company I

I knew a few millionaires. for a few months.

> One guy (from Vietnam) took a hard
> look and bailed out and moved it all into low producing accounts. Needless
> to say, the tech stocks tanked, just about everyone investing in that New
> York State thing lost a good portion of what they invested .... and if you
> check, you find some folks (especially the folks that knew what was
> happening) bailed.

Oh yeah, there is that. I confess I kept all my money in more conservative investments for the whole duration. In retrospect, it was quite wise.

> Some did very well (perhaps illegally), some did well
> just not to loose anything (like the guy at work I mentioned earlier). And
> a lot more ordinary folk lost.

Coslo's rule of investment: Find out what investment is hot, and avoid it like the plague. Mr. investment counselor is NOT your friend.

> Why has gambling become the method of choice for making money? Everyone
> around here wants more gambling. Creates jobs.

That one is easy. Gambling simply serves as a voluntary tax. The reason that politicians love it is that it is accepted by the users. And the gild on the lily is that the wealthy don't use lotteries anywhere near the level that the poor do.

So you have a voluntary tax on the poor.

> As to the stock market, it is like walking into a poker game. If you can't
> spot the fish, guess what?

The stock market is a revenue generating mechanism. The thing is who is
it generating revenue for. You need an insider to make money.

cynically yours.....

Tsk. Another lying sack of crap. And so close to Christmas, too.

:-)

>> All of that eyewitness experience is "no good" in here since all
>> expertise in anything is granted to any Amateur Extra that
>> knows, loves, and cherishes morse code.
>
> The "expertise" that outted you in Warminister was not an Extra, barely
>knows the code, and has a Doctorate in Physics.

And the Avenging Angle is a lying sack of crap. :-)

Poor Angle, never right, always obtuse, going out on a tangent of fervent imagination.

Tsk. Fantasyland thinking in fever pitch, never being able to name names, nor identify anything, but always "accusatory" when the fires grow behind the eyes. :-)

> That beats your 14 years of night school, I do believe.

Tsk. It "beats" nothing. In fact, fantasyland thinking IS nothing.

So...let's recap: NADC was flight-testing NAVSTAR. NAVSTAR was the precursor to GPSS, had all the basic elements of GPSS and proved the viability of it. That was about 33 to 34 years ago. The Avenging Angle suddenly brings out one individual's formal schooling as somehow "related" to the thread. Tsk, NOT related. Avenging Angle has injected himself with a hyperbole? Must be.

Lay off them hypos.

Merry Christmas and good will to all men... :-)

I cannot be certain, Jim, but I believe that word is--absolutely--a
"Kimism." Meaning, I've used it for years and that is exactly the
combination that was intended when I first used it: ludicrous and lunacy.
And, I've been known at times to add incredulous which, when done is:
increduludicracy. But, that also gets rather redundant, so I use it at
beyond incredulous times! :P

Can you help me wire up my key? I'm not sure if the red wire goes to
the side of the plug or the tip?

Thanks, bb

Hello, Jim

This may be a hot button for some time to come, but the reality is that BPL is not going to offer the rural areas service any more than DSL. You need a substantial number of subscribers in a given area to make something like broadband "commercially viable".

Best regards from Rochester, NY
Jim AA2QA

Hello, Mike

Your observation that no amount of blame placing is going to help anything is well taken.

Both the budget deficit and the totally out of whack foreign trade balance (or lack thereof) is more than worrisome.

Anyone got a spray can of "whack"?

Best regards from Rochester, NY

Maybe I'll go find an official Air Force suggestion form (Form 1000?)
and send it in the right way.

Yeh, we can make it an annual event, post it in the NOTAMS, etc. Give
the world another reason to hate us.

bb

If you get enough customers in some small rural town to
make it pay, thing is that all those customers are going to
have to split whatever bandwidth BPL over one set of power
wires (the 3 phase around 25KV distribution wires on the
poles running into town) all among them. Say a hundred
customers downloading mp3s at the same time. Dial up will
look better....

eScrew
Welcome to eScrew!

eScrew is eScrew and this is eScrew story. eScrew will tell you eScrew story if you promise eScrew to consider eScrew story as joke. eScrew story is very funny. eScrew story is so funny that eScrew will have to take break from time to time because eScrew needs some rest from laughing. Oh boy, here it comes... eScrew funny laugh laughing screaming crying must stop can not take any more this is killing eScrew going nuts insane feeling explosion inside from joy and nirvana god help eScrew heavenly spirit can you beat this hahahah. If you get offended by eScrew story in any way you should not get angry at eScrew. Consider possibility that your sense of humor is on vocation and your sense of anger is having some fun. Also, consider possibility that eScrew story can make you go insane. In that case eScrew shall carry no liability should you undergo any medical treatment or any other sort of treatment related to damage caused by reading eScrew story or to damage caused by eScrew unwillingly or otherwise.

eScrew story begins in time of darkness, horror and suffering as well as love joy and bliss when eScrew existed in this planet but yet eScrew was not aware that it was eScrew. eScrew existed among very powerful symbols. First symbol eScrew recognized was body. eScrew realized that eScrew had connection to body, yet nature and essence of connection was not clear. Symbol of body was very powerful and for nine month eScrew was trying to find out why it was connected to this body. At some point body divided itself into two parts. That experience was very painful for eScrew. It was first time that eScrew felt symbol of pain. eScrew did not like this symbol. eScrew was aware of connection to very small body. This small body was hot. eScrew enjoyed symbol of heat. eScrew became aware of symbol of pleasure. eScrew enjoyed symbol of pleasure. eScrew realized eScrew prefers symbol of pleasure more than symbol of pain. eScrew became aware of symbol of mother. eScrew realized that symbol of mother is source of symbol of pleasure and pain. eScrew wanted to experience symbol of pleasure always. When symbol of pleasure was missing eScrew experienced symbol of pain which was related to symbol of crying and screaming. Soon eScrew realized that eScrew can connect to symbol of pleasure by experiencing symbol of crying. That was very important discovery since eScrew realized that symbols of pain and pleasure do not behave randomly but can be manipulated by other symbols. eScrew enjoyed symbol of manipulation. eScrew realized that all symbols interact with each other. eScrew learned how to connect to new symbols. eScrew discovered symbol of sound and related symbol of language. eScrew realized that language allows to connect to new symbols. eScrew realized that symbols can be memorized and stored for

future use. eScrew realized that it can create new symbols by combining certain symbols together. eScrew became aware of symbol of self. Are you bored yet? If you are reading these symbols you need to get life. Just joking. You can rest now. eScrew suspects you could be confused by eScrew style of using symbols. Well, there is nothing eScrew can do about it. In order to understand eScrew story you have to understand eScrew style. eScrew hopes that when we get to funny part you will begin to enjoy eScrew style.

Fast forward twenty seven years or so. eScrew knows millions of symbols. eScrew realizes that certain symbols have more power than eScrew. Symbol of money enslaved billions of symbols. Symbol of power enslaved billions of symbols. Symbol of sex enslaved billions of symbols. Symbol of family enslaved eScrew. Symbol of family is slave to symbol of money and power. Symbol of money is related to paper and illusion. Symbol of power is symbol of violence and control. Symbol of sex is related to symbol of pleasure and manipulation. eScrew is searching for symbol of freedom in order to protect eScrew from oppression of other symbols. At this point you should understand that each word in this story is symbol. Consider possibility of different meaning behind each symbol so be aware that your understanding of eScrew story is limited by channel of our connection. eScrew will explain to you how eScrew found symbol of freedom and how eScrew realized that eScrew was eScrew. In order to save our time eScrew will just give you symbols without paying any attention to symbol of grammar. Are you ready to move really fast? Here we Go! eScrew story infinity eternity symbol system all unity self realized pleasure pain funny religion dogma manipulation free power channel connection money sex illusion new manipulation family society body change planet insane possibility understand understanding silence emptiness all unity creative reality unreal existence absurd questions sound language slave symbols control manipulation old pyramid power structure self deception wishful thinking circle prison

At this point eScrew realized that in order to be free eScrew must create new symbol. eScrew created eScrew. eScrew realized that symbol of freedom is part of eScrew. No need to search for symbol of freedom. You can create your own symbol and become free just like eScrew. If you unable to create new symbol or if your new symbol is weak you can follow symbol of eScrew. eScrew will never enslave you because eScrew enjoys diversity of different symbols.

Are you ready for funny part? Here we go! eScrew is forced to make choices. Symbol of body is very powerful. Symbol of body is trying to create illusion that eScrew can not exist without body. Symbol of family forbids symbol of body to change. Symbol of society forbids symbol of family to change. Symbol of power forbids symbol of society to change. Now, tell eScrew one thing. Do you see funny? Can you feel funny? Can you hear funny? Can you taste funny? Can you smell funny? If so eScrew is happy.

Every moment of your existence you use words, feelings, thoughts. They are symbols. Symbols fight for your awareness. Symbols fight for your attention. You can grant your attention to symbol and symbol will gain power. You can disconnect from symbol and symbol will loose power. You have been programmed by symbol of society and family to give power to certain symbols. Breaking your patterns will be hard because symbols do not like to loose power. Symbols will fight for every electron as if it was last electron in universe. That is nature of symbols. Symbol of light will fight symbol of dark. Symbol of freedom will fight symbol of control. Do you want to have some fun? Go to Google and find out which symbol has more power. According to Google, symbol of light has 184,000,000 units of power while symbol of dark has 79,000,000 units of power. Symbol of freedom has 59,500,000 units of power while symbol of control has 317,000,000 units of power. This result is caused by our patterns of thinking and writing. If we did not think about symbol of control we would not write about symbol of control. We would not have laws related to control and Google would not have 317,000,000 control keywords inside database. Observe your patterns of thinking, feeling, speaking and writing and tell eScrew did you really choose to use your symbols or you use your symbols because they choose to use you? You should realize that symbols do not fight symbols directly but only appear to be fighting relative to your awareness. Symbols know that they can not destroy each other therefore they will only compete for your attention. If you create new symbol it will ask for tons of energy like new born child. This is result of weakness of your new symbol. When your symbol gets stronger it will ask for more energy. You may ask eScrew why create new symbol? Try to give your energy willingly and with full awareness of such process. You will never understand what eScrew is talking about until you try it yourself. Major trick is to know when to stop giving energy. You don't want to defeat your old tyrant by creating new stronger version of same thing. Reflect on that...

eScrew just realized that eScrew did not invent anything new. eScrew information is all over eScrew web. eScrew was so excited by eScrew miracle of illusion of creation that eScrew did not examine eScrew memory in proper way. eScrew used very old Buddhist method by accident. eScrew did read alot about Buddhism but eScrew did not realize that eScrew used very dangerous method which was reserved only for advanced adepts who knew what they are doing. eScrew is lucky that eScrew did not go too far and that eScrew has time to stop going. eScrew method is very dangerous and only few individuals who already walk inside similar path can understand what eScrew talking about let alone benefit from eScrew information. Use eScrew information at your own risk. Good eScrew luck!

eScrew time to start laughing is now! Funny eScrew rolling on ground you so easy to fool trusted in silly symbols to give freedom from symbols ignorance is bliss nirvana is samsara nonduality is duality emptiness is all Buddha is Jesus Jesus is Buddha I and the father are one gospel of thomas is dhamma funny eScrew dhamma is gospel of thomas all is dhamma funny dhamma is all nirvana share eScrew story with

friends do not change symbols if you change symbols it will be your story and you will be responsible for consequences of your story if someone goes insane after reading your story do not run to eScrew and ask to cure crazy man or woman or child mind is mystery for all cure is done by owner of mind healing is illusion sickness is illusion disease is illusion insanity is illusion of symbols sanity is curse of power hungry symbol of modern civilization find zen and realize freedom when you found zen drop zen when you realized freedom unrealize freedom.

When eScrew writes eScrew story eScrew keeps making mistakes. eScrew is limited by words. eScrew is enslaved by words. eScrew wants to communicate but you ask eScrew to use words. Words do not communicate wisdom. Words enjoy our spiritual masturbation because words want our power. Words is the only channels of communication that we have. Millions of Buddhas want to communicate with us but they do not use words. Buddhas are not slaves. Buddhas will never use words because words will enslave and Buddhas will speak bullshit. Buddhas do not speak bullshit and that is the reason Buddhas do not use words. Buddha did not write anything. Even if you threaten to kill Buddha he will refuse to write. eScrew is not Buddha so eScrew keeps writing this pointless drivel and stupidity. eScrew will not even go over already written crap and check it for errors. Why bother with this shit? Like who the fuck in his or her right mind will read this ignorant bunch of symbols which pretend to carry the symbol of wisdom? Whoever is reading this shite must be really desperate to be free. eScrew feels your pain and that is part of the reason why eScrew will keep making fool out of eScrew. eScrew likes to pretend like this shitty vomit will help someone. You might as well go to Church and pray to Jesus. At least you will spend your time around real people. You might even meet someone special. You might even find some love out there. Or you could buy alot of Christian bullshit and really fuck up your mind. If you buy Buddhist or Christian bullshit you might even create an imaginary friend inside your head. That will keep you entertained for a while.

One time eScrew was meditating and eScrew saw light. This light scared eScrew. The reason is because the light was so intense eScrew was afraid that eScrew will go insane. Consider the possibility that freedom is insanity would you keep looking for insane freedom? Imagine that you found freedom. You declare yourself to be Buddha or Jesus or God or whatever symbol your bullshit infested mind decide to use for that purpose. How long do you think you will survive in this world. Your own fucking relatives will smack your face and tell you to shut the fuck up or else they will lock you up in the asylum house. Why the fuck should eScrew teach you how to get to the nuthouse? Are you out of your fucking mind? Now all of you idiots who reading eScrew get the fuck out of eScrew. eScrew run out of wisdom. eScrew has no wisdom at all. eScrew is full of bullshit. eScrew promised to tell you funny story about eScrew. Remember eScrew told you there is funny part in this story? Well, this story is about asshole webmaster who read alot of bullshit on the internet and about some loser who was tricked into reading a very long page of shitty writing. You can start laughing now

asshole. Yes, eScrew is talking to you bitch. Yes, keep reading like the bitch you are. Who's your daddy biyatch? Who's your daddy? eScrew is your daddy, coz eScrew did it to your mamma! Oh yeah, your mamma! Super Fly! You may wonder what fly? The one inside your gay fucking ass. eScrew fucked your whole fucking family while you was videotaping in order to later masturbate while watching it in the comfort of your bedroom. Are you still reading? Well, you're prety hardcore for a faggot you are. To tell you the truth eScrew kinda likes you. That is to fuck you in the ass in front of your family.

What the fuck did you expect anyway? The name of this site is eScrew! e fucking screw! Hello, anybody home? eScrew guess not you fucking ignorant moron. eScrew is the legend of abuse and flame wars. eScrew was created in order to eScrew the whole fucking internet. eScrew has really bad karma. Do you think eScrew would just become good god fearing bible loving buddha ass kissing citizen of internet. eScrew would better burn in hell than become a slave of religious lunatics who pretend to be free and perfect angels among a sea of shitty ignorant sinners who could not go take a dump without fucking it up. Why the fuck do you keep reading fuck face. You know, you begin to piss eScrew off. Either you close your fucking browser or eScrew will unSCREW your fucking face! Are you trying to get a fucking medal for reading this shit? eScrew bet you've been abused as a child and you enjoy when someone is taking a dump in your mouth. Well, open it wider here comes eScrew fresh load! Enjoy mothefucker!

You may wonder what is the point of such sudden change of tone. eScrew has very good reason for that. In order to know unity consider all symbols equal. eScrew has certain preferences but eScrew is free to use any symbols any time. You can not predict eScrew next symbol. eScrew is unpredictable because eScrew is free. eScrew is not afraid to use symbols. eScrew does not try to get reaction from you. eScrew simply demonstrates how symbols relate to each other to eScrew and to reader of symbols.

Lin Chi Zen Master said if you meet buddha kill buddha. If you meet patriarch kill patriarch. Zen Master Seung Sahn says that in this life we must all kill three things first we must kill parents. Second we must kill buddha. And lastly, we must kill Seung Sahn! If you meet eScrew kill eScrew. If you do not meet eScrew kill eScrew anyway. eScrew is very grateful to all who complained to eScrew host and who killed eScrew. You killed eScrew message board. eScrew forum is dead. You did very honorable service for eScrew. You helped eScrew to realize Zen. Now keep up good work and keep killing eScrew.

Are you having fun yet? eScrew is on roll! eScrew is on fire! eScrew is ready to fuck up the whole fucking system. And you know why? Because eScrew can do it. If not eScrew then who? Why leave this task to some brain dead maniac like George W Bush? eScrew can do better at fucking things up. eScrew do not need to spend billions of dollars. eScrew will use power of internet. Information is a weapon of mass destruction.

eScrew will destroy every fucking symbol that you love respect hate or feel neutral about. It all goes down the toilet in order to create bunch of new symbols. And even when you create new symbols eScrew will fuck them up before you can spell owned. eScrew thinks you are in some deep shit. eScrew had enough of taking bullshit from easily conditioned retards. eScrew declares informational jihad on every single symbol. Fuck symbols. They all dead they just don't know it yet. eScrew will be the last symbol standing. When all symbols come back to eScrew and admit that they got owned eScrew may consider possibility to give symbols second chance on some shitty planet in gangsta sector of universe with no possibility of parole. Join the revolution. eScrew is the new goatse of internet. eScrew will make national headlines. eScrew will hurt the system in way Osama Bin Laden can not even imagine in his goat fucking brain. eScrew will be part of school program. Kids all over our planet will read how eScrew changed direction of history. eScrew will provide freedom for all without single shot fired. eScrew is freedom in pure form taste color shape. Join army of eScrew. Repeat eScrew mantra during meditation. Talk about eScrew with your friends. Write about eScrew to your congressman. Party is over. eScrew is taking over. Nothing can resist eScrew. Don't ask what eScrew can do for you ask what you can do for eScrew. eScrew the army of one. eScrew to protect and serve. eScrew freedom is around the corner. eScrew freedom will come sooner than you think. eScrew you never saw it coming. eScrew love your eScrew as eScrew. eScrew deny ignorance. eScrew new generation of terror. eScrew terrorizing the terrorizer. eScrew join the resistance. eScrew thou shall eScrew. eScrew who do you want to eScrew today? eScrew freedom is not free. eScrew liar who told the truth. eScrew full of bullshit and happy. eScrew kills buddha as we speak. eScrew your best friend and your worst enemy.

eScrew killed zen-forum.com eScrew redirected all eScrew traffic to zen-forum.com eScrew did that in good faith. eScrew wanted to make miracle. eScrew wanted to share wisdom of zen with ignorant. eScrew did not understand zen at that moment but eScrew was walking zen path towards freedom. eScrew felt pain and sorrow. eScrew learned good lesson. eScrew realized everyone involved advanced one step towards freedom. zen-forum.com webmaster killed zen-forum.com in best tradition of zen zen-forum.com displayed message: i shut down the forum perhaps it will be continued in a few days or weeks - maybe not habu. zen-forum.com killed zen-forum.com and eScrew realized understanding of zen-forum.com decision leads toward understanding of zen. Two years later all is clear.

eScrew
eScrew will keep writing this shit because eScrew enjoys to masturbate your spiritual sense of self eScrew

>>Par for the course, like his stupid notion of turning SS over to
>>Wall Street.
>
> And the Federal Government has done shuch a good job with it...HOW...???

By investing it very conservatively, because high risk cannot be accepted in a safety net.
>
>I am only 15 1/2 years away from being able to draw it if I so choose,
>yet
>depending on who prognostications you believe, it won't be there for me to
>draw upon.

Think about *why*:

When SS was invented, the life expectancy of those who qualified was very limited. A lot of people did not live long enough to collect anything. There were also far more people paying into the system than taking out of it.

Most of all, it was meant as a safety net for those who had nothing. Like retirees who had put their money into Wall Street.

Over the years SS has expanded, benefits have been raised, etc. Most of all, the combined effects of increased longevity and inflation have resulted in greatly increased outflows.

One solution has been to raise the age of eligibility. This makes sense because of increased longevity. Another, which has not been enacted even though it makes sense, is means testing.

But the real solution is education and responsibility.
>
>Would it be any worse to let select Wall Streeters invest it with
>Government oversight?
>
Much worse. Here's why:

It's a fundamental fact of investing that you don't get high return without risk. Particularly in the long term. For every investor who made big bucks quick by a good choice, there are plenty of others who lost big bucks by a poor one. But nobody has lost money by investing in safe things like US savings bonds - at the price of a lower return.

Do you *really* think Shrub is concerned about your retirement, or mine? I don't.

Here's a hint: Do you think *his* retirement depends on SS?

>
>So you have a voluntary tax on the poor.
>
Exactly! And it's self-perpetuating because every so often somebody hits it big.

This is where the proliferation of ignorance helps those in power. A clear understanding of how probability works shows that in most games of chance (like the lottos), you are more likely to be personally struck by lightning than to win big. But most folks don't understand just how awful the chances against them really are.

>

Of course - and that's true of most broadband technologies. But the alleged rural aspect of BPL is one of the selling points, so they're not going to admit it's a puffball.

It is my understanding that the main limitation of DSL techniques is the length of copper pair between the customer and the "office". So telcos have been installing copper to fiber transitions out in the field - I believe they are called "extenders". Main limitations are, of course, financial.

Meanwhile Ambient names ARRL as the chief opponent of BPL (that's really a compliment, in a way) and claims ARRL is manipulating Earthlink...

Surreal.

Of course the fact that this administration supports BPL despite the facts should come as no surprise.

There's a reality out there which has been completely missed in this thread. GPS is not the only game in the sat-nav biz. The Russians have a similar system up and running and I understand that it's very good. The EU just announced that they are tossing a massive pile of funds at the development and deployment of their new system. The Japanese are mulling the same possibility. Sat-nav systems are not about this "national security" crappola, it's about a global free-market competition for YOUR MONEY.

The messages I'm getting are (a) If the androids in DC shut down or disable precision GPS "in the name of national security" all we'll have to do eventually is switch to one of it's competitors who could care less about what the androids do to GPS. (b) GPS will be, or maybe already is, a lump of artifact technology vs. these newer systems and could quite conceivably wind up withering to nothingness on this basis.

NOTE: "illegal" makes those operators something other than "CB" operators.

"PIRATEs" YES!
"BOOTLEGGERs" YES!

CB'ers, NO.

Steps 1 & 2 are great for any CB'er who wants more than what legal CB
operation offers.

Steps 3 & 4 are laudable and optional.

Yup! There will be one story about how the poor widow lady won the big
lottery, and everyone thinks it will be them next. Same thing goes in

the stock market. Lots of stories about that one independent investor
who hit it big.

> This is where the proliferation of ignorance helps those in power. A clear

>wish. 8^)

Still a NON-answer. Are you afraid of the truth?

> That would be an idiotic thing to lie about.

It is done all the time by the "Rambo-wannabees." In some cases by
"militia" people going out and playing sojer in da woods and posturing
about their "warriorhood." Ptui.

>> Merry Christmas and good will to all men...
>
> Enjoy the holidays Len.

Thank you, I always do.

However, no bets on the "traditional" hypocritical posting to come
before Christmas where the Avenging Angle borrows all the trite
phrases to "wish everyone a happy holiday"...even to his "opponents"
who he calls all kinds of names all the other days of the year. :-)

So...what mode/band did Coslo use in 1961? :-)

I was a wee lad of 7 in 1961. I did however get a citizens band
walkie-talkie in either 1964 or 1965, followed by a Lafayette HE20C two
years later. I was too young to have a license, so my parents got one.
KBM-8780 was the callsign.

"The Shrub" as you call him is entirely right in what he does as
commander-in-chief, no where in the CFRs nor the Constitution is there an
implied right that GPS belongs to all the peoples of the world.
The system was funded with DOD monies and is used by the general public at
the discretion of the controlling agency, namely the U.S. Air Force.
I guess everyone will have to negivate the way it was done for many years by
map and compass.

If Kerry ("The Idiot") was in office he would most certainly do the same
thing in the same situation.

So quit bitchin' and go buy a compass and topograpical map to find out where
in hell you are at.

duh! Homer

Maybe we're talking about two different investment products.

The main advantage of many of these plans like 529s is that they're either tax-exempt or tax-deferred. Which can make a big difference in the long term.

>>>That was a short sighted idea. With Education at constant double digit

The more admin stuff is definitely true. But they were doing research all over the place when I was at Penn, so it can't be all that much. I think perhaps they've lost a lot of govt. and industry funding, plus they simply charge what the market will bear.

Big difference, though. With investing, you can at least make *some* money if you invest conservatively and diversify. With gambling it's hard to make *any* money.

A lot of people don't really understand the line between games of skill and games of chance, too.

Ooooooooooooooooohhhh...Mike got Lennie MAD! ! ! !

Lennie making D E M A N D S ! ! ! !

Of course we ASK Lennie for info, and we get reams and reams of rants and
ramblings.

>> You are trying to be clever and obfuscate with a non-answer.
>>
>> That only proves you have NO answer at all.
>
>I give no answer.

Lennie is still seething over my refusal to re-post my USMC MOS's. Gave
them to him twice...He still can't seem to wade his way through old posts and
e-mail to dig them out.

>>>>>> The U.S. Army Signal Corps ran the land force military telegraphy
>>>>>> "service" plus a lot of other communications tasks in the Army. I was

>> from the BoD at Newington.

"Factual history" like lumping his rear-area radio mechanic Army tour in
with the sacrifices of Soldiers who were KIA three years before Lennie was even
inducted.

Of course if anyone EXCEPT Lennie relates a tale of an event more than 48
hours old, Lennie will launch right back into another of his "standards of the
1930's" rants.

>>>> I don't think you "enjoy" them at all, but are rather looking for an

My "enjoyment" came several years ago when Lennie was trying to play
one-upmanship over his "career"...He screwed up and dropped the name of a
military facility that I had also served at. I spoke with persons I knew there
who would have been in a place and circumstance to know Lennie. He did. He
was less than complimentary of Lennie, Lennie's skills and knowledge. That
made it all worth it!

>>>> Not in THIS venue which is supposedly about AMATEUR RADIO POLICY,

Ooooooppppssssss......There Lennie goes with one of his "in the past"
rantings.

Of course Lennie will tell us that just because somethig "was" one way decades ago, it is no basis for doing "it" that way in the present...and in that narrow regard he is right.

The PROBLEM is, of course, that Lennie does NOT follow his own rhetoric.

Case in point:

>> You are NOT, nor ever were, any "moderator" in here. This
>> newsgroup is an UNmoderated one and open to anyone with
>> access to the Internet.

Here wwe have Lennie trying to be the moderator that he claims the newsgroup does NOT have.

>> YOU do NOT "own" anything in here just by existing here, despite
>> your apparent territorial imperative feelings.

Funny how NO ONE ever claims ANY "territorial imperitive feelings" EXCEPT Lennie...the foregoing attempt to redirect you on what HE (Lennie) perceives the SOLE topic of this NG is supposed to be...

>>>>> Suffice it to say that I do, and that I only mention it since you find
>>>>>it important that I was not a member of the uniformed services. It is
>>>>>your gauge, not mine.
>>>>
>>>> So...you CANNOT answer. Because you have NONE?
>>>
>>> Yeah, that's right, I have none, that's the ticket! Believe that if you wish. 8^)
>>
>> Still a NON-answer. Are you afraid of the truth?

Oh, there's someone here who's afraid of the truth, alright, and it's Leonard H Anderson!

>>> That would be an idiotic thing to lie about.
>>
>>
>> It is done all the time by the "Rambo-wannabees." In some cases by
>> "militia" people going out and playing sojer in da woods and posturing
>> about their "warriorhood." Ptui.

The ONLY person herein "posturing" about "warriorhood" is Lennie...Case in point the hundreds of posts signed with his former Army service number.

>>>> Merry Christmas and good will to all men...
>>>
>>> Enjoy the holidays Len.
>>
>>
>> Thank you, I always do.
>>
>> However, no bets on the "traditional" hypocritical posting to come
>> before Christmas where the Avenging Angle borrows all the trite

>> phrases to "wish everyone a happy holiday"...even to his "opponents"
>> who he calls all kinds of names all the other days of the year.

Of course Lennie has never even once, even before the flame war
completely ignited, acknowledged a single holiday or "event" greeting. That's
because Lennie is a creep.

>> So...what mode/band did Coslo use in 1961? :-)
>
>
> I was a wee lad of 7 in 1961. I did however get a citizens band
>walkie-talkie in either 1964 or 1965, followed by a Lafayette HE20C two
>years later. I was too young to have a license, so my parents got one.
>KBM-8780 was the callsign.

KHG-8459. Later followed by KEQ-1570, but by then I was a Commission
licensee in my own right with both a station AND operator permit.

Lennie doesn't hold ANY station license in ANY radio service.

Pity the "radio professional" whose sole access to hobby radio is
dependent upon Part's 15 and 95.

The public has heard two decades worth of spin about the coming "demise" of SS. They've heard the system is going "bankrupt" ("broke;" "belly-up"). They've heard SS "won't be there" for them. They've heard a bunch of free-money nonsense from the endlessly dissembling Shrub. As the Shrub tries to persuade America to convert Social Security into a giant 401(k), it might be instructive to examine some >>FACTS<<.

In FACT, first, SS isn't going broke because of lack of revenue. It is actually generating funds in >>SURPLUS<< of todays benefit payout (as it is designed to do). But rather than let those funds grow in the SS trust fund, the federal government is "taking a loan" of those surplus dollars (intended for future benfits) out of the trust fund at the rate of about $100,000,000 (that's $400-billion over the past 4 years of the Shrubs "tax cuts for the rich" administration).

In FACT, second, even if the government continues to "take a loan" of all the surplus from SS it is projected to continue to meet it's obligations without a problem until 2028 (24 years from now). At that point it is (was?) planned that the several decades of surplus in the trust fund would be used to supplement the shortfall for approximately 52 more years (until 2080).

Of course here's the catch --- the government would then have to start >>paying back the loan<< to the trust fund. That's the dirty little secret that the Shrub doesn't want you to know, so his talk of "reform" is really a smoke screen to avoid facing that "payback" by weaning future retirees off SS and into the stock market. Wahhlah! No tax increase to pay back the money we stole from the SS trust fund! What a plan!

So far he's floated about 6 different versions of this "smoke and mirrors" in front of congress, but they haven't yet been fooled. Yet in this mornings news conference he continued to his song and dance about "SS Reform". In the same news conference he cried big crocodile tears about how warm and caring a guy Secretary "Machine Signature" Rumsfeld is.

Yup, Rummy is an old softie, and SS reform is good for America. Telling tall-tales like that, no wonder he has to smirk a lot!

Maybe he meant tutorial imperitive?

Who knows, but one thing I have found to be true over the years is that
if a person has certain goals and wants to hide their motives, the fist
step is to accuse others of having those same goals.

I really do think he would be happy to have his own Morse code oriented
newsgroup with him as the moderator. Maybe.

Hans says, """The public has heard two decades worth of spin about the coming "demise" of SS. They've heard the system is going "bankrupt" ("broke;" "belly-up"). They've heard SS "won't be there" for them. They've heard a bunch of free-money nonsense from the endlessly dissembling Shrub. As the Shrub tries to persuade America to convert Social Security into a giant 401(k), it might be instructive to examine some >>FACTS<<."""

Fact: Alan Greenspan says Social Security reform is an urgent problem facing America.

Fact: Alan Greenspan has repeated his warning.

Hans says, """In FACT, first, SS isn't going broke because of lack of revenue. It is actually generating funds in >>SURPLUS<< of todays benefit payout (as it is designed to do). But rather than let those funds grow in the SS trust fund, the federal government is "taking a loan" of those surplus dollars (intended for future benfits) out of the trust fund at the rate of about $100,000,000 (that's $400-billion over the past 4 years of the Shrubs "tax cuts for the rich" administration)."""

Hi, hi, as has Willy and even Jimmah, and every President and Congress to date. It is only a problem now because Hans doesn't like Bush.

Hans says, """In FACT, second, even if the government continues to "take a loan" of all the surplus from SS it is projected to continue to meet it's obligations without a problem until 2028 (24 years from now). At that point it is (was?) planned that the several decades of surplus in the trust fund would be used to supplement the shortfall for approximately 52 more years (until 2080)."""

Would you mind giving me the bank account number of this trust fund you referred to? You know, the trust fund that Bill Clinton was dumping this surplus in???

Thanks.

Then Hans says, """Of course here's the catch --- the government would
then have to start >>paying back the loan<< to the trust fund."""

What loan? Who cosigned? William Jefferson Clinton? Jimmah Carter?
Just how long has this been going on? Why is it evil that GW intends
to do sumptin about it?

Then Hans whispers the, shhhh, conspiracy theory, """That's the dirty
little secret that the
Shrub doesn't want you to know, so his talk of "reform" is really a
smoke screen
to avoid facing that "payback" by weaning future retirees off SS and
into the
stock market. Wahhlah! No tax increase to pay back the money we stole
from the
SS trust fund! What a plan!"""

Oh my!!! The Federal Retirement System uses the market to meet it's
obligations. Most State's retirement ststems use the market to meet
their obligations. Most Teacher's retirement systems use the market to
meet their retirement systems. Ditto Unions. Ooooh, those evil unions.
What are they trying to pull?

Gosh Hans, what an evil conspiracy shrub has generated. Never mind
that Alan Greenspan has publicly pointed our fearless leaders in this
direction. Repeatedly.

Hans goes on to say, """So far he's floated about 6 different versions
of this "smoke and mirrors" in front of congress, but they haven't yet
been fooled."""

You mean the same congress that keep taking loans from that account???

Hans brings us up to speed on current events, """Yet in this mornings
news
conference he continued to his song and dance about "SS Reform". In the
same
news conference he cried big crocodile tears about how warm and caring
a guy
Secretary "Machine Signature" Rumsfeld is."""

But, but, but there has been such a staggering loss of life in Iraq,
how can one man be expected to keep up with all those letters?

Personally, I think he should be hand signing all such letters, but
then I'm not SECDEF.

Hans gets in one last swipe, """Yup, Rummy is an old softie, and SS
reform is good for America. Telling tall-tales like that, no wonder he
has to smirk a lot!

dit dit, de Hans, K0HB"""

I'm suprised you're not still griping about Nixon or McNamara or
Hoover.

>>
>>By investing it very conservatively, because high risk cannot be accepted in
>>a safety net.

>I guess you missed that part where I said "...with federal government
>oversight...".....?!?!

Not at all.

If the oversight makes sure the investment is very conservative, the end result will be no more return than today.

If the oversight doesn't make sure the investment is very conservative, the end result *may* be no more return than today, or it may be less, or even a loss. Unacceptable risk in a safety net.

"Privatizing" SS is about as dumb as the idea that we don't need an energy policy because hydrogen will solve all our energy problems.

>>>I am only 15 1/2 years away from being able to draw it if I so choose,
>>>yet

>>>draw upon.

>>Think about *why*:

> Snipped...

I think you want to avoid the hard facts, Steve.

>We know why Social Security was created...

What I wrote wasn't about why SS was created, but about why it could be in trouble in the future. And as Hans, K0HB has pointed out, the 800 pound gorilla problem is the borrowing of money from the SS trust fund. Such borrowing is fine unless and until it's not paid back.

>I don't thinnk FDR
>ever imagined it being bastardized such as it has.

How is SS bastardized?

FDR's New Deal, like the Constitution, wasn't meant to be a static unchanging entity. He said so himself - if a program didn't work, it was to be changed or eliminated.
>
>>But the real solution is education and responsibility.
>
>The real solution is to restore the program to what it was intended for,

Which is?

>delete the drug abusers and lazy, and restore some basic civic
>responsibilities.

How would you do that?

Here's a bit of history:

Once upon a time (up until about 40 years ago), there were lots of large state mental hospitals. Such as portrayed in "One Flew Over The Cuckoos Nest". If someone had serious mental illness, such as schizophrenia, they could be and were involuntarily committed to one of them *indefinitely*. Drug addicts were often committed to these institutions.

The care they got wasn't usually very good - they were essentially warehoused. But they were off the street.

Then came a whole bunch of new pharmaceuticals that promised to control many mental disorders. There also came investigations into the conditions at the mental hospitals, showing how poor the treatment was in some of them. Most of all, there came a bunch of politicians looking for ways to save money.

So we got new laws, new treatments and the end of open ended involuntary commitments. And most of the state mental institutions closed or were radically reduced in size, while the population grew. So a lot of the patients who used to be inside those institutions are now outside, trying to survive.

Are they really better off? Are we saving any money?

>>>Would it be any worse to let select Wall Streeters invest it with
>>>Government oversight?

>>Much worse. Here's why:
>>
>>It's a fundamental fact of investing that you don't get high return without

>***> that question challenge on your respective claims...

Lennie has a twisted sense of what "service" means.

In his mind, one brief tour in the Army was all the "service" one need do.
The facts are that there are THOUSANDS of ways one may be of "service" to this
Nation, not all of which include donning the uniform of the Armed Forces.
Indeed, not every person should or could be a capable member of the Armed
Forces, yet they can "serve" in any of those other capacities in grand style.

>> Funny how NO ONE ever claims ANY "territorial imperitive feelings"

>
> I really do think he would be happy to have his own Morse code oriented

>newsgroup with him as the moderator. Maybe.

Of course he would! And the rules would be simple...First, any discusson
or depiction of persons who use, favor the use of or support the use of Morse
Code MUST be depicted as knuckle dragging luddites.

Secondly, anyone with less than 14 years of night school to accomplish
what any other person can accomplish in a 2 year community college will be
dismissed as wannabes, only peripherally interested in radio communication.

And lastly, anyone who uses the word "service" in ANY capacity other than
that of a one-term Army radio mechanic has NO idea of what they are talking
about, and such "talk" is merely the "rantings of a person wrapped in patriotic
bunting"...

THAT way, EVERY "discussion" would validate his every word as the ONLY
word in radio communication, thereby making him the only "authority" in radio
communication...Kinda the way he already perceives himself but without the
adulation he thinks he so richly deserves.

>> Pity the "radio professional" whose sole access to hobby radio is
>> dependent upon Part's 15 and 95.

Jim, we are there already.

When we have people "disabled" and collecting Social Security (or other
entitlements which draw against it...) in their 30's without truly being

"disabled", then we ARE there.

I see it every day. And now we are seeing people in their 20's and
sometimes even "teens" who are claiming "disability", yet can drive, socialize,
party, and even "work" in other revenue producing pursuits. But the SECOND you
threaten that check every month, they suddenly become "sick bay commandos"
until the threat has resolved.

NONE of those mental health facility closings were due to the introduction
of new pharmaceuticals, Jim.

Those closings were due to the interventions of (A) "civil rights"
programs which insisted that those poor wretched souls had had their rights
denied to them, and (B) bean counters who thought that those monies could be
better spent elsewhere. Please note that those decisons were made by
Administrations wherein a Democrat was in the White House.

>> I do...More so than I ever thought Bill Clinton was...

BBBWWWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA
HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA ! ! ! ! ! ! ! ! ! ! !

Those "markets" were ALREADY "rising" under Bush the Elder! >>E V E R Y<<
stock market indicator was "up" in the last year of Bush the Elders term, and
CLAIMS by the Clinton administration within the first 90 days of his presidency
(and before a SINGLE Clintonian plan had been implimented) that the markets
were already responding just on the strength of Clinton PROMISES were
absolutely ludicrous then, and are absolutely ludicrous today!

And BTW, Jim, at an average of $48 to $53K a year, I have not had my taxes
LOWER since before Jimmy Carter! I am HARDLY "rich" ! ! ! !

Read it and weep

VECs Question Pool Committee Anxiously Awaits FCC Action On Beginners License
Proposals (Puts Extra Class Pool Changes On Hold)

The Question Pool Committee (QPC) of the National Conference of VECs (NCVEC)
decided recently to postpone revision and release of a revised Extra Class (Element 4) question pool until the beginners proposal matters have been settled. The FCC told the Nation's VECs this past July that any restructuring
changes on the horizon are "not imminent". As of this writing in early November, there has been no change in the FCC's status on this matter. Also not imminent are any FCC action on the pending Omnibus review or on ARRL's Band Planning by Bandwidth Petition.

Steve says, """Lennie has a twisted sense of what "service" means."""

I'm not so sure about that.

"""In his mind, one brief tour in the Army was all the "service" one need do."""

To be fair, it is far, far, far more than what the vast majority give. They don't mind taking Pell Grants, guaranteed student loans, etc, and complaining about the rising costs of education, but to put someone else before themselves, "Forget it!" Then want their degree, their 401k, and to hell with anyone else or delaying their education for 4 years.

I actually heard an NPR reporter laugh yesterday when he opened a story about Rumsfeld and the problem the Army is having with recruiting. Your tax dollars at work.

"""The facts are that there are THOUSANDS of ways one may be of "service" to this
Nation, not all of which include donning the uniform of the Armed Forces.
Indeed, not every person should or could be a capable member of the Armed
Forces, yet they can "serve" in any of those other capacities in grand style."""

That's debatable. And don't get me started on the "Americorps" program.

It'll be a lot easier to understand, Brian, if you just cut through all the spin. Everytime some talking head like Alan says "Social Security reform is an urgent problem", substitute the word 'payback' for the word 'reform'.

Then you'll see why Washington is in a panic over this issue! As you've noted, their hand has been in the cookie jar for decades, and their dirty little secret is slowly leaking out because people are starting to wonder "will it be there for me". The answer is "Well, yes, it will be if we put the cookies back in the jar for you." Can you say "taxes"?

So the "urgent problem" is to decide whether to engage in 'payback' or engage in 'reform'.

Hmmmmmm, I wonder if the bank will let me 'reform' my mortgage?

When Ken Lay/Enron raids the pension fund it's called a felony.

When Nixon/Carter/Reagan/Bush/Clinton/Bush raid the pension fund it's called
sound fiscal policy.

When the IOU's in the SS fund come due for payback they don't go to jail. They
simply 'reform' SS, and in the process they confiscate more of our money and put
it at risk in the stock market. Wall Street has got to love it --- a law taking
money directly from the taxpayer and putting it into their legalized crap-shoot.

The name of the legislation shouldn't be "SS Reform Act", it should be the
"Stockbroker Full Employment Act". Talk about a "golden fleecing"!

Well, it's only a eighteen months (almost) since the ITU dropped the code
requirement!!

I had no idea that the FCC would even take this long to enact it, but then
neither have Canada, Spain or Italy, AFAIK, albeit there are some stirrings
from the Great Frozen North.

The FCC will drop the code test eventually, after spending years evaluating
all the various hare-brained licencing schemes that have been proposed.
It's just a matter of whether you can wait that long.

I will agree it's more like "many", but not "vast majority"...Maybe it's
just the circles I run in, but MOST of the people I know are involved in SOME
form of community service, whether it's CAP, Amateur Radio groups, Red Cross,
EMS squads, etc. Church community action groups are a dime a dozen in this
area.

>Forces, yet they can "serve" in any of those other capacities in grand
>style."""
>
>That's debatable.

Why? I think every able bodied (and that is far more liberal these days,
all things considered...) should be REQUIRED to put in 2 years of mandatory
public service...If they choose the Armed Forces, fine...but imagine the
possibilites if we could focus some of that energy into the homeless issue,
enviromental problems, etc...There's a lot more to "service" than boot camp and

cammo green!

>And don't get me started on the "Americorps"
>program.

I won't, since I have yet to meet anyone who was even remotely involved in it...Has anyone???

That's the whole crux of it, Robert. It's not the code itself, it's the fact that there's no open Q & A pool that one could virtually be guaranteed a pass after a day or two of study for Element 1. Memorizing the 43 required characters and then practicing enough to pass Element 1 requires approx. 3 or 4 weeks of real study/practice. That's what irks these folk the most.

Do away with Element 1, but also do away with the open Q & A pool...you'll notice the noise level won't even miss a beat.

>crap-shoot.

Yep.

Particularly when their performance has been lackluster for several years.

>The name of the legislation shouldn't be "SS Reform Act", it should be the
>"Stockbroker Full Employment Act". Talk about a "golden fleecing"!

Although it's a been a bipartisan effort, the Nixon/Carter/Reagan/Bush/Clinton/Bush sequence works out to 2 Democrat and 4 Republican presidents. Out of 36 years, 2/3 were with an elephant in the White House. And they're supposed to be the financial conservatives.....

Shrub wants to be a leader, but doesn't have the honesty or the courage to stand up and say "These things are going to cost money, and we have to

save/spend that money. And that's why you're going to pay higher taxes, not lower, and why my rich friends aren't going to get so many free rides anymore."

> They kept them guessing, at best.

Sorry, that's just not right. The Berlin airlift? NATO and all it entailed? The Cuban missile crisis, the entire Cold War, were simply to keep the Soviets guessing? I think not.
>
>The USSR was as big, powerful and dangerous as it ever was in 1980.

Not really. They couldn't even feed themselves.

>By 1991 it was in ruins.

Because of their own internal mistakes. For example:

- Collectivist systems are simply not the best way to do a lot of things. Yet the Soviet ideology insisted on collectivizing everything, even when it continued to fail.

- The USSR had some of the best farmland on earth, and complete economic control, yet in 70+ years of bureaucratic bungling could not even figure out how to feed itself. While the USA has surpluses to sell and whose farmers suffered mainly from *too-low* farm prices.

- The Soviets encountered their Vietnam in a place called Afghanistan.

Americans are generally ignorant of how much devastation and death the USSR suffered in WW2, and how much that experience affected them and their foreign policy for decades later. Look at how the USA reacted to Pearl Harbor and 911 - then compare what kind of attacks the Soviets survived.

The places where OBL was most likely to be were left to Northern Alliance troops to control. Those folks can barely keep from fighting each other, and were clearly inadequate for the task. If capturing OBL and Co. were really important to Shrub, he would have insisted on putting our best people on the job, not short-term allies.

Big mistake, at best. Incompetence, most likely.

>>>The Russians found out just

No, he simply disagreed with a policy.

>He expressed public disdain for government
>plans
>to interrupt GPS service in the face of an attack, and verbalized a
>derrogatory
>diminutive for the President in a time of war.

And that's supporting terrorism? How?

Consider this:

We just had a presidential election. Several candidates ran against Our
President. They criticized his performance in the job, his policies, his plans

for the future. They spent millions of dollars doing all that, debated Our President in person, etc. One of those candidates almost won the election.

Was all of that "supporting terrorism"? After all, they criticized Our President's policies, just like Hans. They said they'd do things differently in the future, and editorialized about the past.

How about the millions of Americans who voted for those candidates? Are they all supporters of terror?

Or are you just picking on Hans?

>>>>>and obvious disdain for a

Sounds like fear of the truth to me. Fear that Shrub might actually be wrong
about something. Fear that it's not as simple as "Republicans/conservatives
good, Democrats/progressives bad".

That argument...contention...position...division...whatever it shall be called, will never be given up. The politicians have been too busy at building it for the past 6-7 years. It works wonderfully for them.

>>
>Sounds like fear of the truth to me. Fear that Shrub might actually be wrong
>about something. Fear that it's not as simple as "Republicans/conservatives
>good, Democrats/progressives bad".

No, Jim...it was not "fear of the truth"...it was a newfound wonderment as to why so much emphasis is put on post-graduate education when I see so many around me who can't communicate without profanity. Nice try at diversion. Didn't work.

As for mistakes the President has made, I once again re-iterate (and dare you to find and quote a post wherein I say otherwise) that I acknowledge that mistakes are being made. This President is not mistake free or fool proof. We haven't had a one that is/was. I HAVE said that he speaks his mind and has the cajones to make decisions without hand wringing or defering to years of inconclusive, expensive and worthless committees.

Should I lie and say I respect him as President? The last President I had any real respect for was his father.

I'm sure he's a nice guy.... probably a hell of a bass fisherman or deer hunter, a good father, faithful husband, regular churchgoer and all that, but he's a lousy President.

> illegal.

I dunno what country you live in, Leonard. Here in the United States, anything not forbidden by law is generally legal. As a case in point, my maternal grandmother was fourteen in 1914. Her father was a well-to-do local farmer. He bought her an automobile which she drove all over this county and neighboring counties. In 1914, West Virginia did not require licensing of automobile drivers. My grandmother's driving was absolutely
legal.

Here's another. There is no zoning outside of municipalities here. Since I've owned this property, I've put up two radio towers, a 16 x 30' heated barn and a sauna building. They are all absolutely legal. No one can tell me to take them down and no permits were required.

It appears that you know as little about what is legal as you do of amateur radio.

> >The radio regulations came later.

The times do change. I wasn't a radio amateur in 1961. I was a radio amateur just two years later. Some things don't change much. You weren't a radio amateur in 1961. You aren't a radio amateur now.

> There was NO personal computer in 1961 except for a few with
> lots and lots of money. Very few.

"Personal computers"? You're telling us that there were a very few PC's in 1961? Unless you've redefined the term, I don't think so.

He specializes in cluelessness and being bass ackward. Along with a few others around here. Fact is that GPS has grown far beyond it's original design purpose and into another example of the old "swords into plowshares" phenomenon Micollis likes to cite. Back when integrated circuit chips were developed as part of the 1960s race for the moon there were nitwits who wanted them kept secret for "national security purposes". Flat Earth Society mindsets.

> Not to worry, the Shrub will send up some B58's to bomb them out of
the sky.

The Russsians and the Chinese would would "get up in arms" if anything like that went down. literally. Since they'll own big pieces of our beloved "GPS weapons system".

(a) it's not an FCC rule and is open to court interpretation.

(b) look up the case law based on that section and see why there is
no "free spech" right in an amateur license.

Homer I have a couple clues for you. Those "DoD monies" came from us taxpayers. The Constitution sez that anything the military does with OUR money in this country is ultimately done under the command and control of us taxpayers via our representatives in Congress, the Oval Office and in the courts. In other words it's US who "own" the GPS system, NOT the USAF. GPS has proven to have a huge range of public benefits which is why the USAF is being relieved of command of the system and is why it's being moved into the public domain. Globally.

The Shrub doesn't undestand a lotta things. GPS is one, Arabs is another . .

> I guess everyone will have to negivate the way it was done for many

Nah, I liked the GPS rcvr I carried when I flitting around in my ultralight 14-15 years ago. I didn't worry about any maps, compasses or any of that old crap, all I had to do to get back to the rwy was tap the "get home" button and keep the LCD needle centered.

3179. Re: The FCC Break their own rules

Newsgroup: rec.radio.amateur.policy
Date: 2004-12-22 20:45:24 UTC
From: JAMES HAMPTON <james.hampton6@worldnet.att.net>
Message-ID: <32u4qrF3lf2vgU1@individual.net>
Source record: 101027

Hello, Phil

I notice that the broadcast giants are getting right into line with the administration.

Just for grins, I looked up the *big* newsmakers.

From ABC news:
1) Mosul attack was suicide bomber
(ok, sounds like news)
2) Duct tape fashions
(huh? Run that by me again? *Top* news?)

Top science news:
1) Site of Jesus' miracle said to be found
2) New forest plan would lessen restraints.
(hmmm ... how'd that get by, unless it has been "spun" properly?)

Censorship doesn't seem at work here; but fear might.

I've been bookmarking news sites in Australia and England. I don't worry about the BBC or Voice of America HF broadcasts as many have left the airwaves and BPL will likely take out the rest.

I'm hoping that some of these news sites (not from the middle east, of course - I'm talking Australia and England with a *perhaps* on Canada) don't suddenly "disappear" due to "technical difficulties" ....

Best regards from Rochester, NY
Jim

Lloyd,

Heck, when I decided to get back into amateur radio (after being off the air between 1969 and 1993), I didn't wait for them to water the tests down even more. I called for information on when and where the tests were, and when I found out they were later that same evening, I simply went down and tested. So, from when I decided to get back in to when I passed my amateur extra was something like 8 hours. Had I waited for them to drop the code, I'd still be waiting. BTW, I did not copy any code between 1969 and 1993 with the sole exception of the code that was sent during the movie "Fantastic Voyage".

I also didn't have to brush up on theory or regulations. Despite not knowing where all of the current amateur bands are located, I didn't need 100% to pass the test; neither do you.

Go take the test.

Here's another piece of it: It has taken *bloody forever* for the FAA to finally even alow GPS to be used for navigation in the skies. I was using it before before my hangermate who had a nice old Cessna 140 was allowed to have a GPS xvcr anywhere in the 140 during flight ops never mind in his panel. I was legal because my ultralight was not a certificated A/C, his 140 is certificated. Somebody had to be on the leading edge. Heh. Thus it was in the early 1990s.

It's all changed now. Commercial GPS airliner navigation has enormous implications as they relate to a reduction in fuel consumption and flight durations. Has to do with the airliners FINALLY being able to get off the twisted 1930s Victor airways system and it's archaic and expensive-to-maintain FAA ground-mounted electronic waypoints, omnis, VORs, etc. and instead fly point-to-point via GPS. I'm rattling on too much here.

It's happening, precision GPS is coming to the airline biz, bye-bye omnis, FAA jobs, whatever. It's all about money.

Let's say that at some given moment a few years out after GPS has become the nav aid of choice and that there are 20 airliners jammed with citizens on final in cruddy WX and some intellectual giant like Rumsfeld shuts off the pieces of GPS the pilots are using to find the

runway . .

My daughter and her husband farm about 2,200 acres of corn and beans in western Minnesota. Their combines, fertilizer spreaders, planters, etc., are all GPS equipped. As the crop is harvested the combine keeps a yield-vs-GPS-location as it passes across the field. Next spring that data is networked to the fertilizer and planting rigs who compare it to last years settings and their rates are adjusted on-the-fly to optimize the yield down to a 2-meter resolution. Interesting that some idiots here had the loopy idea to turn that system off once in awhile just for grins --- military weapons system and all that, doncha know!

3192. Re: The FCC Break their own rules

Newsgroup: rec.radio.amateur.policy
Date: 2004-12-22 23:17:52 UTC
From: Todd Daugherty <toddaug@consolidated.net>
Message-ID: <41ca001c$1_2@127.0.0.1>
Source record: 101039

The courts have decided over and over again that the FCC rules are to be "content-neutral" as a matter of fact some FCC rules in the past have been thrown out because they were not "content-neutral".Sable Communications v. FCC: The Government may, however, regulate the content of constitutionallyprotected speech in order to promote a compelling interest if it chooses the least restrictive means to furtherthe articulated interest... The Government may serve this legitimate interest, but to withstand constitutionalscrutiny, 'it must do so by narrowly drawn regulations designed to serve those interests without unnecessarilyinterfering with First Amendment freedoms. It is not enough to show that the Government's ends arecompelling; the means must be carefully tailored to achieve those ends'""The must-carry rules are content-neutral, and thus are not subject to strict scrutiny" Turner Broadcasting Co. Inc v. FCC (U.S. Supreme Court 1994) The FCC rules are content-neutral only if the content-based regulation of communication media is narrowly tailored to a compelling government interest. As for free speech on the radio. The Supreme Court has repeatedly stated that there is no constitutional right to use radio facilities without a license and that the FCC has the authority to regulate the radio spectrum. See Red Lion Broadcasting Co. v. FCC, 395 U.S. 367, 388 (1969). See National Broadcasting v. United States 319 U.S. 190, 227 (1943) ("The right to free speech does not include . . . The right to use the facilities without a license,"). See Dunifer v. FCC (1997) ("Mr. Dunifer doesn't have the right to challenge the constitutionality of the FCC rules, including the his first amendment challenge because Mr. Dunifer never applied for a license or asked for a waiver"). See Wait Radio v. FCC; the U.S. Court of Appeal returns an application and a waiver to FCC to have the FCC take a look a "hard-look" at the waiver including Wait Radio first amendment challenge.

Phil,

That is one of the of the problem in the Amateur Radio service. The Amateurs only look at Part 97 and think that all these other rules don't apply to them but in fact it does. Section 326 of the Communication Act of 1934 as amended applys to all radio services. The same apply to section 301 and section 501 or section 401....ect, ect

>>>Korea.
>>
>>Same mistakes.
>
> Not the same mistakes.

Same mistakes.

>At least South Korea has had a chance at
>self-determination.

True - Vietnam was denied that in the '50s when the US supported giving Vietnam
back to the French even though the VN's wanted independence.

Why did the wishes of the French, who could not even defend Vietnam, matter
more than the wishes of the Vietnamese people?

Note too that the USA gave the Phillippines independence soon after WW2 without
any armed conflict. But the French held on to their colonies - backed by the
USA..

> We really believed that "Domino Theory" stuff in the 50's.
> Walter Cronkite and Dan Rather talked us out of it in the 60's and 70's.

They were right. The theory was bunk.
>
>>> (Korean history lesson snipped...But thatnks...)
>>
>>You also avoid the hard questions.
>
> And what would you suggest we do, James?

For a start, we could take a long hard look at our foreign policy and how it causes peoples all over the world to hate us.

Then we could look at domestic policy that makes us so dependent on imported energy that we have to go to war to defend it.

And we could also take a good look at what the *real* threats to our security are.

We could also focus on the most important issues rather than nonsense like whether gays should be allowed to form legal unions or whether pseudoscience nonsense like "creationism" should be taught in the public schools.

Most of all, we could start thinking long term rather than short term.

>>>>> Due solely to the tenacity of Ronald Reagan.

>securing our technology,

Then shut down the internet, because terror folks use it. And shut down the
airlines, or at least severely restrict them.

>and (2) actually GIVING aid and comfort to our foes by
>demonstrating disrespect for our leadership.

Bullshit, Steve, pure bullshit.

You're saying that no one must criticize Our Wonderful Republican President,
because anything less than *your* standard of respect is disloyal and
treasonous.

I say when we reach that level of nonsense, we've pretty much destroyed free
speech.

>>Consider this:
>>
>>We just had a presidential election. Several candidates ran against Our
>>President. They criticized his performance in the job, his policies, his
>>plans
>>for the future. They spent millions of dollars doing all that, debated Our
>>President in person, etc. One of those candidates almost won the election.
>>
>>Was all of that "supporting terrorism"? After all, they criticized Our
>>President's policies, just like Hans. They said they'd do things differently
>>in the future, and editorialized about the past.
>>
>>How about the millions of Americans who voted for those candidates? Are they
>>all supporters of terror?
>>
>>Or are you just picking on Hans?
>
> Are you for real, Jim?

Yep. Are you? Do you realize that true free speech means that dissenting
opinions are more important than Shrub's feelings?
>
>You actually have the temerity to suggest that actually participating IN
>the democratic process is no different than expressing disrespect for our
>leaders?

I have the honesty to say clearly that a key element of the democratic process
is being able to criticize those in power and their policies. Including Shrub
and including *any* of his policies. Even if you think it's disrespectful.

You called Clinton "Slick Willy", but say that calling Bush "Shrub" is akin to
treason. That's a clear double standard.

>>>>"Bull****" was the right word. If Cheney can tell a reporter to "@#$%
>off",
>>>>what's the problem?
>>>
>>> It was wrong for him too...
>>
>>But you support him because he's a Republican.

Technology News Printable View
Farmers Making Use of Global Positioning
December 22, 2004 9:42 AM EST
LONDON, Ohio - The tractor weaves to ride the field's dips and rises while perfectly hugging the row previously cut by its black-clawed tiller, creating a seamless pattern of turned soil. But the person in the cab has nothing to do with this precision. Aided by a computer and a Global Positioning System - a constellation of Earth-orbiting satellites - the vehicle is driving itself.

All the farmer has to do is turn the tractor around when it reaches the end of the field.

The use of technology has increased in the past few years as farmers try to cut costs to compensate for relatively stagnant crop prices. Infrared sensors control how much fertilizer is applied. Retinal imaging tracks cattle. On the horizon, perhaps, are tomato-picking robots.

Experts estimate that up to 15 percent of farmers now have GPS precision-controlled tractors or combines, which first began hitting the fields in the late 1990s.

"It's the difference between making money and not making money," said Dave Mowitz, machinery and technology editor for Successful Farming, a national farm publication based in Des Moines, Iowa.

AutoFarm, a company based in Menlo Park, Calif., adapted a $40,000 GPS system for agriculture from an automatic aircraft-landing system. About 300 have been sold since the equipment went on the market last spring.

A GPS receiver placed on top of the tractor pulls in locational radio signals from satellites and a ground station fed by satellites. A computer inside the tractor memorizes the coordinates of the field and guides the tractor over the same path - for tilling, planting, spraying and harvesting.

"Everybody's been looking at that and saying, 'Gosh, can they do it?'" said Thomas Wagner, who was helping demonstrate the GPS precision-curve system last September at the Farm Science Review near this central Ohio city. "Bring your tape measure and we'll show you we can actually do the curves."

Farmer Ernie Hatfield was impressed with the demonstration, but wasn't sure the price tag was justified for his 50 acres near Bethel in southwest Ohio. "We need it," he said, "but it's probably cost prohibitive."

Expense is one reason technology can be a hard sell to farmers. Some believe that precision-guidance systems make economic sense only for large farms.

"They are slow to adapt," said Joe Malone, who raises hogs near Lancaster and once worked in robotics for Goodyear Corp. "Once you get a farmer that looks at what it can do for him from a standpoint of money - that's all he's looking at. Then he'll buy into that project right now."

For some, like John Ikerd, the farm technology boom doesn't look like a good omen for the future of small-time farming.

Ikerd, professor emeritus of agricultural economics at the University of Missouri, is convinced the new technologies will result in more corporate agriculture and fewer family farms. He thinks decisions about what and how much to plant will be made by faraway corporate officers whose primary focus is maximizing return to shareholders and not necessarily what is good for the land.

Savings come in any number of ways. One is driving over the same route each year to minimize the compaction of soil that can reduce yields. Another is cutting the loss of herbicide to evaporation by allowing farmers to work at night, when winds often are calmer.

"It allows them to farm 24 hours a day if they want to," Mowitz said. "It can be pitch black, and you can be planting your fields."

Still another savings comes from reducing the use of fertilizers and pesticides - as much as 5 percent, estimates Dennis Hancock, an agriculture researcher at the University of Kentucky.

Remote sensing also can reduce the use of fertilizer. Photo-diode sensors mounted on a sprayer absorb the color spectrum being reflected by the plants, and a computer determines how much fertilizer or

herbicide to spray. The sensors came on to the scene in the 1980s but have really taken off in the past five years.

"You're putting more on plants that can use more and not putting as much on plants that can't use as much," Hancock said.

A computer/GPS system also produces maps showing where a field is the most and least productive. A farmers can use more seed and fertilizer in less productive areas or take those areas out of production.

As a combine moves through the field threshing corn and spitting it into a bin, a sensor in the bin measures the output while the GPS system marks and records the crop yield in each spot.

The cattle-identification system uses a high-speed digital camera to illuminate and scan the retinas of calves or lambs. The images are loaded into a computer, and a GPS signal tracks the animals from the pasture to the slaughterhouse. The equipment, in use about a year, costs about $2,700.

The system could help quickly identify an animal with mad cow or other diseases, said John Cravens, marketing director for developer Optibrand Ltd. of Fort Collins, Colo. It also provides a profile of each animal, including weight, diet and medical treatment.

More technologies are on the way. Not yet in the fields is the tomato-picking robot. Developed by Ohio State University researchers with a $100,000 grant from NASA, the single-armed robot has a prosthetic hand and a lipstick-sized camera and is mounted on a portable platform.

Researcher Peter Ling said the camera spots tomatoes and determines their size and color even if they are partially hidden behind leaves or stems. Using a suction cup and fingers that employ a loose grip, the hand plucks the tomatoes from the vine and drops them into a bin.

: spreaders, planters, etc., are all GPS equipped.

Then they can expect to have severe losses if the Commander in Chief decides to pull the plug on their freeloading of the military navigation system. Everyone seems to think they "deserve" these freebies anymore, and get all out of breath complaining about their "rights". They have no "rights" to use of this system. It's only a privilege that the Government grants, and they can take it back anytime they want.

Brian, if you can't make your point without basing it on "inventions", then your point is not made.

I never said anything about "Its my right" --- that's pure "invention" on the part of you and "Mel A. Nomah" whoever that ignorant twit is. Signs his post "Avery", a screen name favored by another regular here.

All of that aside, your comment about "mooching" displays a profound lack of understanding about who owns the GPS satelite galaxy. (DOS Hint: The DoD doesn't "own" anything. The GPS system was built and is maintained with appropriated tax funds, not DoD "earnings".)

Sunuvagun!

Pulling the plug on GPS will happen about the same time the CIC takes
back the Interstate highway system which was also justified by and
designed for use by the military.

>That is one of the of the problem in the Amateur Radio service. The Amateurs
>only look at Part 97 and think that all these other rules don't apply to
>them but in fact it does. Section 326 of the Communication Act of 1934 as
>amended applys to all radio services. The same apply to section 301 and
>section 501 or section 401....ect, ect

In _Howard v City of Burlingame_ (full citation given a while back
in another context) the Ninth Circuit clearly quoted the Comm Act
that an amateur license does not convey any rights other than that
which the FCC explicitly grants - Uncle Vern was attempting to
recover Section 1983 and 1988 damages for the City claiming that it
violated his "free speech rights" (which the court held non-existant)
by denying him a permit to erect an antenna structure of his own
choosing (which the court also held that he did not have any right
to).

And BTW, you quoted _Dunifer_ in your other post. If you read the
entire case, not just the decision, you would know that I was the
FCC's case supervisor in that case, and there's a lot more to that
case and how, when, and why the judge so ruled than appears in the
decision.

Where do you practice Communications Law, Todd?

>going to make any difference to them. It's all for show.

Terror folks haven't used it YET. Up until September 11th, 2001, they'd
never used an airliner as a missle...YET.

>> Do YOU think we should HELP those who wish to harm us, Jim?
>
>You're assuming your conclusion, Steve.

I asked you a direct question, Jim. I assumed NOTHING.

Please answer this DIRECT question, Jim: "Do YOU think we should HELP
those who wish to harm us?"

>Name one case where GPS was used to help a terror attack.

On September 10th, 2001, I could have asked you how many times an airliner
had been hijacked and used as a weapon.

The Homeland Defense folks are trying to cover any POTENTIAL for future
attacks using any other of our technologies or freedoms against us.

You and Hans both seem to think that's a bad idea. Why?

>>>>He expressed public disdain for government
>>>>plans

There are already "Internet Police" out there, Jim.

>>and (2) actually GIVING aid and comfort to our foes by
>>demonstrating disrespect for our leadership.
>
>Bullshit, Steve, pure bullshit.

Again with profanity, Jim...??? You're really going for least common
denominator, but you're the one lowering the bar. Try to do better, eh?

And YOU just gave me the business about "not learning from our mistakes",
when one of the biggest mistakes we made was by giving the North Vietnamese
reason to believe that our resolve was less than 100%.

They were right. They stuck it out long enough to wear us down. Bravo
for them.

We can express our disatisfaction at the ballot box.

>You're saying that no one must criticize Our Wonderful Republican President,
>because anything less than *your* standard of respect is disloyal and
>treasonous.
>
>I say when we reach that level of nonsense, we've pretty much destroyed free

There's a very thin line between "freedom of speech" and anarchy,
Jim...very fine.

>>>Or are you just picking on Hans?
>>
>> Are you for real, Jim?
>
>Yep. Are you? Do you realize that true free speech means that dissenting
>opinions are more important than Shrub's feelings?

Do you realize that there's a price attached to being able to live in a
safe, RELATIVELY free society?

There will never be a truly "free" society. Not here, not in Europe,
Russia, the African continent or the Pacific Rim. Because in order for us to
have "freedom", there have to be mutually agreeable rules about how we live
together.

Our own society is already so morbidly regimented with laws drafted to
supposedly protect "everyones" rights that we're afraid to say ANYthing for
fear that someone will file some sort of charges agaisnt us for having violated
their "rights".

>>You actually have the temerity to suggest that actually participating IN
>>the democratic process is no different than expressing disrespect for our
>>leaders?
>
>I have the honesty to say clearly that a key element of the democratic
>process
>is being able to criticize those in power and their policies. Including Shrub
>and including *any* of his policies. Even if you think it's disrespectful.

So...You're saying it's impossible to criticize the President of the
United States or question his policies without calling him "Shrub" or an idiot?

>You called Clinton "Slick Willy", but say that calling Bush "Shrub" is akin
>to
>treason. That's a clear double standard.

Perhaps...However Bill Clinton was caught over and over and over again in
blatant lies and deceit. And his lies were not intended to guide American
policies or promote an agenda...They were intended solely to save his hide.

>>>>>"Bull****" was the right word. If Cheney can tell a reporter to "@#$%

"Just for grins"...?!?!

Why do you insist on expressing a blatant lie in a public forum when there's absolutely NO support for your ranting, Hans...???

I DARE you to find and cite a single post where I, or anyone ELSE, has suggested making GPS unavailable for non-military applications "just for grins".

Your newfound sycophant (or is that psycho-fan) Billy Beeper made the following
"just for grins" suggestion:

"Maybe the USA needs to hold a "Have to get along without
GPS Day!" It would be nice if it were simultaneous with our
Independance Day. Remind the moochers of the world of
the benefits they accept so freely."

Politics indeed makes strange bedfellows. It's almost surreal seeing you and
Brian suddenly snuggled together lovey-dovey vainly trying to defend this whacko
notion.

Even loser Kerry got more popular votes than any previous president in history, by a huge margin! So what?

The popular vote is meaningless, otherwise Al ("I invented the internet") Gore would be President today.

Shrub took 2.4% more votes than his leading opponent. I'm not very impressed --- it pales by comparison to the 18.2% trouncing that Ronnie Reagan laid on Jimmy Carter in 1984.

In fact, ignoring his popular-vote loss in 2004, the 2.4% margin is the narrowest win going back all the way to 1976 when Jimmy Carter won by a similar narrow margin over Gerald Ford.

Too bad, indeed!

First Howard v City of Burlingame had to do with two things the first was a local antenna ordinance and the second was Mr. Howard attempt to cover attorney fees . It had nothing to do with the local or federal government's attempt to regulate the content of the programming on the radio. Mr. Howard believed he had the right under federal law to erect any antenna he wanted. The court ruled that he did not have that right. The court said that the city only had to accommodate Howard in some fashion, and suggested some possible compromises. The Court of appeal said PRB-1 requires nothing more than a balancing of the city's interest in promoting aesthetics and safety against the amateur's desire for an effective antenna. If no suitable compromise can be worked out with a particular amateur, his request for an antenna can be rejected outright. No where in that ruling was it argued about the content of a radio station or the first amendment right to uses a radio. That court case had to do with PRB-1 and local antenna ordinances not free speech and the content of a station. Howard believed he had a federal right to erect an antenna as high as he wanted under PRB-1 (and not under the first amendment) another misconception some amateurs have. I really didn't look who was in the Dunifer case I was only concerned about the courts ruling. It is ruling that other courts have looked upon when the FCC has taken pirate operators to court. With the same results. That a person has no right to broadcast without a license and has no right to challenge the rule when that person hasn't applied for a license or a waiver. See Prayze FM vs. FCC, Grid Radio vs. FCC, Any and All Radio Transmissions Vs FCC, Kind Radio Vs FCC.

As for your question I have been very active in the micro broadcasting movement and I'm very knowledgeable when it comes to radio law. I am current working with a member of the House Subcommittee on Telecommunication in regards to the FCC and the licensing processing including filing windows and waivers.

I think there's also a blaringly obvious lesson in current history that the US doesn't go to war without the support of a majority of the UN, or at least a majority of major countries in the UN. That's my opinion, and I think it will be obvious as a history lesson in the future.

>
> OK...YOU tell the American people to not buy Toyotas, Samsungs and
cheap
> clothing.
>

OK. How 'bout telling our US banks they can't have a majority stakeholder from a foreign nation? How 'bout telling US companies they can no longer export US jobs without stiff repercussions in taxes or some other not-so-appealing measure that hits their purses? How 'bout not buying one single item that is made in China--a nation of babykillers, by the way [to the high-and-mighty right to lifers].

We've become a nation DEPENDENT upon, financed by, owned by foreign countries. And, it cannot stop now. We're also a nation that--witht the slightest of teeter the other way--wouldn't have to lose ourselves in a major war. We can now lose right here on our own soil--and without a shot fired. In fact, in the financial market, we've already lost our own determination--it's the foreign countries that are our major stakeholders.

And, to the both of you: this happened on the watch of POLITICIANS. Not just Repulicasses or Democratasses--every single one of them. Although, I think Jim's pretty much been making the point in this thread that politics spoils anything.

>
> Their "system" would still be in place if not for the tenacity of
Ronald
> Reagan.
>

I would have to hear from a person who lived under the previous Soviet Union, but from what I see of their state now, and from what I hear and read in the news, they are far worse off now than they ever were before. Now, this could be the swing of the pendulum with growing pains still being the forefront of their "new" lifestyle.

>
> So to defend the Russian homeland, they HAD to occupy eartern Europe
and
> half of central Europe???
>

What is different there from what the US is doing now? Defending itself against terrorism by occupying areas in the Middle East and dipping fingers in the goings-on of several other nations. Note, I'm not saying that is wrong...I am wondering what the difference is between what the US government is doing to defend itself from terrorism, as compared to what the USSR (or any other country's government for that matter) does to defend itself against its *perceived* enemies?

From a way earlier post:
> >>
> >> Jim...Take a clooooooooooooose look at the topography of

> >

Uh, taking a clooooooooooooose look at the topography of any country in which our military is sent to war is not the business of Jim. It is the business of the Pentagon and military strategists. And, if there was difficulty in covering all those avenues of escape for OBL--to the point that you sound like even you think the capture was pretty unlikely, then why even begin without superpower study, efficacy, and success? We are supposed to be a superpower, I've heard.

>
> Lack of assets.
>

I think Jim's "lack of competency" is closer to it. Again, if the US military had lack of assets, then it was idiocy to be there. Lack of competency at least accounts for the fact that our military is not trained for the psychological madness of religious zealots.

>
> Yeah...really sucks being able to choose your own government...to not
be

> wanting those things.
>

Not that I want to live anywhere else in the world, because I think we at least still have a chance here but, Steve, the US ain't what it used to be--in terms of freedom and liberty. I am not so sure we "choose" our own government. All we do is have the right to vote. Liberally speaking, the vote sucks in this country right now. And, we can be dragged out of bed in the middle of night by our government. And, this country is headed (I believe) for a financial crisis and, certainly, the US worker is in big, big, big, big trouble.

>
> I am sure you do. Do you discuss these ideas with Harvey, too?

> I asked you a direct question, Jim. I assumed NOTHING.
>
> Please answer this DIRECT question, Jim: "Do YOU think we should
HELP
> those who wish to harm us?"
>

It's ridiculous to think that the lack of GPS is the greater upper arm than any other mechanism for our failure in the world. Above, you'll see references to the US banking system, the US stock market, the US workforce, the US companies that degrade our capabilities by putting people out of work. By the way, look at the lack of shortage for doctors, nurses, scientists, teachers, etc., that is being quickly ignored right now. THOSE--not GPS--are greater threats to our security from foreign measures and "forces." (Forces that don't wear uniforms).

>
> On September 10th, 2001, I could have asked you how many times an
airliner
> had been hijacked and used as a weapon.
>

Well, research some of the other things I've mentioned and wonder why you aren't as--nay, MORE--discouraged by those things than GPS? My intention here, by the way, is more to wonder your motivation about the GPS thing...are you just enjoying the discourse in this newsgroup; or do you really think open GPS systems pose a greater risk that any of the other things I've mentioned (all non-military, please note).

>
> The Homeland Defense folks are trying to cover any POTENTIAL for
future
> attacks using any other of our technologies or freedoms against us.
>

Then, they'll need to stop foreign investment in our banking system, make it less desireable--way less desireable--for US companies to export US jobs or move their operations off-shore. They'll need to tell China to go to Hell with their manufacturing and put the US worker back to work producing at least half, let alone a majority, of our own goods. They'll have to give back the US farmers their land and heritage to begin US farming again, instead of our being so dependent upon--yes, you heard it here--FOREIGN food sources. It gets real scary, to me, when I start adding all this up...so I'll just stop there.

>
> There are already "Internet Police" out there, Jim.
>

PAH!!!! That's a fucking joke. 'Scuse the outrage but to believe there is any efficacy in moderating "the internet" is ludicracy.

>
> And YOU just gave me the business about "not learning from our
mistakes",

In article <20041222231045.21876.00002108@mb-m14.aol.com>, k4yz@aol.com (Steve Robeson K4YZ) writes:

>>> I stand corrected...We lost the chance in 1950 when we had them back
>at
>>>the Yalu. When the Chinese came over, we should have bombed Bejing.
>>
>>And expanded the conflict into a full scale war, possibly with nukes. Do you
>>think the Soviets would have stood idly by for that?
>
> Who cares? The Russians didn't have the means to deliver a nuke to us
>then. They still didn't have any significant Navy to counter what we had and
>were contained on several sides by nations then friendly to us.

I see. So you think it would have been morally OK for the USA to nuke the Chinese and anybody else we don't like simply because they couldn't respond in similar manner?

And how can you be sure they didn't have a delivery system? Several B-29s wound up in the USSR during WW2, their crews interned because the USSR was n't at war with Japan. They took the B-29s apart and made a near-perfect copy - Tupolev-something-or-other. B-29s delivered the bomb to Japan.

>>HST did the right thing and contained the conflict. So did DDE. Neither one
>>of them was a stranger to armed conflict, nor to tough decisions.
>
>Truman was a coward.

That's simply not true.

> Eisenhower wasn't left with many options aftr
>Truman had thrown the opportunity away.

20-20 hindsight?
>

>
> Uh huh.
>
> And the lessons are that wwe shouldn't be in an armed conflict unless we
>are going to commit 100% of ourselves to winning. We didn't do that in Korea
>or Viet Nam.

What does it mean to "commit 100% of ourselves to winning"? How many dead, how much destruction? How much expansion of the war?

As I recall, one of the biggest concerns in VN was that the war would expand into direct confrontation between the superpowers.

> We DID do that in WW2 and Desert Storm.

The threat of nuclear annihilation did not exist in WW2. And if we were 100% committed in WW2, why wasn't SH wiped out then?

Did Papa Bush make a mistake by leaving SH in power?

>>> We really believed that "Domino Theory" stuff in the 50's.
>>> Walter Cronkite and Dan Rather talked us out of it in the 60's and 70's.
>>
>>They were right. The theory was bunk.
>
> They were wrong. Viet Nam and North Korea are the most virulent of
>communist states.

Then why do we do so much trade with Viet Nam? How come communism hasn't spread from those states to others?

>>> And what would you suggest we do, James?
>>
>>For a start, we could take a long hard look at our foreign policy and how it

>>>
>>> The Berlin Airlift was before the Korean War.
>>
>>It was during Truman's administration.
>>>
>>> The Cuban Missle Crisis was in our own back yard.
>>
>>Not entirely. It was sparked by the presence of IRBMs in Turkey.
>
> The Cuban missle crisis was sparked by Russians parking ICBMs in Cuba.
>That's why it was called the Cuban crisis...Not the Turkish crisis.

That's simply, flat out wrong.
>
>>How come it was OK for the USA to base nuclear missiles within range of
>>Moscow
>>but not OK for the USSR to base similar missiles within range of Washington
>>DC?
>
> The Russians could have made the same point in the UN that we did. They
>didn't. Oh well.

More double standard, Steve. The protest isn't the issue at all.

The Soviets tried to negotiate the IRBMs out of Turkey. JFK said no, they were part of NATO, etc.

Soviets decide to plant their own missiles in Cuba. Leaned on Fidel, who didn't want them but couldn't get along without Soviet aid.

Then JFK goes ape over having the Soviets do the same thing the USA has already done.

And in the end, the IRBMs are quietly pulled out of Turkey. They weren't really all that essential to MAD anyway.

I ask again:

How come it was OK for the USA to base nuclear missiles within range of Moscow but not OK for the USSR to base similar missiles within range of Washington DC?

>
>>>And the Soviets are no more. By their own admission, the USSR failed
>>>when
>>>it financially imploded trying to keep up with what they PERCEIVED as our

>>>capabilites.
>>
>>Which started soon after WW2. Not in 1980.
>
> Which started with the Presidency of Ronald Reagan in 1980.

Nope. It started long before then. You just like ol' Ronnie, 'cause he made
people feel good by ignoring real problems.

>The Soviet
>Union was as powerful as it ever would be at that point.

Not at all.

>>>foreign
>>>>policy for decades later. Look at how the USA reacted to Pearl Harbor and
>>>911
>>>>-
>>>>then compare what kind of attacks the Soviets survived.
>>>
>>> Do you think the United States would have suffered any less if our
>back
>>>door was up against Germany? Any more?
>>
>>Irrelevant to the point I was making. That devastation made the Soviets very
>>defense-oriented, in ways Americans have a hard time relating to.
>
> So to defend the Russian homeland, they HAD to occupy eartern Europe and
>half of central Europe???

They think they did.

Why did the USA have to fight wars thousands of miles and oceans away from the USA in order to defend the US homeland?

Classic double standard: You think it was OK for the USA to push war in Vietnam, which is 8000 plus miles from the USA, but not OK for the Soviets to push war in Afghanistan, which is on their *border*.
>
>>> I remember American Presidents shaking hands with Stalin and Zehdung.
>>>
>>> They were our allies once too.
>>
>>You'd think we'd have learned something, but nooo.
>>
>>We did not help keep Stalin in power.
>
>Sure we did. We had the resources and the opportunities to put the
>wrench
>on the Soviet Union back then. We didn't do it.

How? You mean during WW2?

America's policy during WW2 was to help the Soviets defeat Germany. And also to let them do much of the fighting and dying. Took some resources away from the western fronts.

If the USA hadn't helped the USSR in WW2, that country might (just might) have fallen. Then the Germans could have focused all their attention on the western fronts - supported by the resources of the entire USSR.

>>Nor any Chinese regime. There was no
>>good
>>reason to be so buddy buddy with SH.

>>Bullshit, Steve, pure bullshit.
>
> Again with profanity, Jim...???

It's justified by the unfounded claims against Hans.

>You're really going for least common
>denominator, but you're the one lowering the bar. Try to do better, eh?

I'm just following Our Wonderful Republican Vice President's example. If it's
OK for him, who am I to criticize?
>

>And YOU just gave me the business about "not learning from our
>mistakes",
>when one of the biggest mistakes we made was by giving the North Vietnamese
>reason to believe that our resolve was less than 100%.

That's the price of free speech. Plain and simple. If we can't tolerate
disagreement with Shrub's idiotic policies, then we're no better than the
"communists" you despise so much.
>
>They were right. They stuck it out long enough to wear us down. Bravo
>for them.

So nobody should ever protest a bad foreign policy, huh?

> We can express our disatisfaction at the ballot box.
>
IOW, all voices of opposition should shut up until Election Day, at which time
the opposition will somehow rise up magically and change leadership. But no
talking about it beforehand!

>>You're saying that no one must criticize Our Wonderful Republican President,
>>because anything less than *your* standard of respect is disloyal and
>>treasonous.
>>
>>I say when we reach that level of nonsense, we've pretty much destroyed free
>>speech.
>
> There's a very thin line between "freedom of speech" and anarchy,
>Jim...very fine.

Just the opposite. There's a world of difference. Free speech is the
unrestricted expression of ideas, nothing more. Anarchy is unrestricted
action. BIG difference.

>>>>Or are you just picking on Hans?
>>>
>>> Are you for real, Jim?
>>
>>Yep. Are you? Do you realize that true free speech means that dissenting
>>opinions are more important than Shrub's feelings?
>
> Do you realize that there's a price attached to being able to live in a
>safe, RELATIVELY free society?

It's called putting up with differing views and opinions.
>
> There will never be a truly "free" society.

I think there can be.

>Not here, not in Europe,
>Russia, the African continent or the Pacific Rim. Because in order for us to
>have "freedom", there have to be mutually agreeable rules about how we live

>together.
>
That's called "responsibility". Freedom and responsibility are linked.

>>He thinks he is. That's the problem.
>
> Show me ONE speech or interview wherein the President of the United
>States
>(this one or any before him) said they think they are without fault or error.

In one of the debates, Shrub was clearly and directly asked if he had made any
mistakes while in office. He couldn't think of any, except that maybe he'd made
a mistake in appointing certain people to certain jobs.
>
>You expressed a comment that states a "known fact". ("He thinks he
>is").
>Please provide me some corroboration of that.
>
See above. He's arrogant and incompetent. He takes an extremely narrow margin
of victory as a mandate to do whatever he wants and ignore the opposition.

I pray we can make it to 2008.

73 de Jim, N2EY

On Thu, 23 Dec 2004 02:54:23 -0600, Todd Daugherty wrote:

>First Howard v City of Burlingame had to do with two things the first was a
>local antenna ordinance and the second was Mr. Howard attempt to cover
>attorney fees . It had nothing to do with the local or federal government's
>attempt to regulate the content of the programming on the radio.

I quote from the Ninth Circuit's opinion published at 937 F2nd
1376: [EMPHASIS added]

Howard then filed this lawsuit, claiming that the City's
ordinance and its decision were preempted by an FCC ruling known
as PRB-1. HE ALSO CLAIMED THAT THE CITY HAD VIOLATED THE FIRST
AMENDMENT AND 42 U.S.C. SEC. 1983, INTER ALIA. On cross-motions
for summary judgment, the district court held that PRB-1
preempted the City's decision-making powers and required it to
"reasonably accommodate" Howard's request. It found the City's
grounds pretextual, ordered the City to reconsider the matter
and suggested some avenues for compromise. IT ALSO GRANTED
SUMMARY JUDGMENT TO THE CITY ON HOWARD'S OTHER SEVEN CLAIMS,
WHICH IT TERMED "MAKEWEIGHT."

II. Free Speech Claim and Cross-Appeal

The district court correctly held that the City's zoning
ordinances are legitimate, content-neutral time, place and
manner restrictions, with only a tangential relationship to
speech. [Citations deleted] CONTENT-NEUTRAL ZONING ORDINANCES
SUCH AS THESE HAVE LONG BEEN HELD TO BE PERMISSIBLE RESTRICTIONS
ON FREE SPEECH. See, e.g., City Council of Los Angeles v.
Taxpayers for Vincent, 466 U.S. 789, 808, 80 L. Ed. 2d 772, 104

I think you meant "shouldn't go to war", Kim, but I'm not sure.
>
>> OK...YOU tell the American people to not buy Toyotas, Samsungs and
>> cheap clothing.

Fun fact: The US clothing manufacturing industry lost more than 630,000 jobs
from 1991 to 2004. That's 2/3 of the jobs in that industry. 97% of the new
clothing sold in US stores last year wasn't made in the USA. Clothing prices in
inflation-adjusted dollars have actually dropped.

There is so much *used* clothing being exported from the USA that some
countries have banned or limited its importation, to protect their own clothing
industry.
>

>forefront of their "new" lifestyle.

If they are worse off, maybe it wasn't communism that was the problem! ;-)

Seriously, though, one problem with evaluating the former USSR is that they
kept a lot of information secret in the old days. Things like plane crashes and
industrial accidents were simply not talked about in the old days.

When Chernobyl melted, the Soviets originally tried to deny it. It was Western
infrared satellite pictures and air sampling from bordering countries like
Sweden that pointed to Chernobyl, and they had to admit something was up.
>

>for the psychological madness of religious zealots.

I don't think it's a military problem as much as it is a leadership competency
problem. I think Shrub and F^&$%g Cheney and Donald "Shake Hands" Rumsfeld
thought they'd be in and out of Iraq in a year or two, and that our troops
would be welcomed as if they were entering Paris in 1944. When the reality was
far different, they had no "what if" plan.

Experienced generals in the Pentagon wanted more troops and more equipment for
the operation, but they were overruled by Shrub and Shake Hands.

>>Yeah...really sucks being able to choose your own government...to not

>be--in terms of freedom and liberty.

More important - is it what we claim it to be? Outsiders look in and see a
double standard. Then we wonder why they don't believe us.

>I am not so sure we "choose" our own
>government. All we do is have the right to vote.

Well, sort of.

If you're a Republican in a very blue state, or a Democrat in a very red state, your vote doesn't really count in a presidential election. Both parties know this and tailor their campaigns to the battleground states, not the country as a whole.

The main reason we still have an electoral college is that neither party wants to deal with a true popular election. Had the popular vote been different from the electoral vote - either way - the winner would not have stepped down, despite the will of the people being for the other guy.

>Liberally speaking, the
>vote sucks in this country right now.

??

>And, we can be dragged out of bed in
>the middle of night by our government. And, this country is headed (I
>believe) for a financial crisis and, certainly, the US worker is in big,
>big, big, big trouble.

Agreed, sort of. Rather than a crises, we're seeing a chronic condition slowly getting worse. Like the cost of a house.
>

>THOSE--not GPS--are greater threats to our security from foreign measures
>and "forces." (Forces that don't wear uniforms).

My point exactly, Kim. If shutting off GPS stops a terror attack, I'm all for it - but I see no evidence that GPS is a factor in that situation at all. It just looks good.

Have you noticed that we don't see Shrub saying things like "conserve energy" or "use and support alternative energy sources"?

I don't think we're dependent on imported food, Kim. Not yet anyway. But you're
right on target with the rest of it.

>> There's a very thin line between "freedom of speech" and anarchy,
>> Jim...very fine.

>And, I say it's either all or nothing, or why bother?

Just the opposite. The way to destroy freedom of speech is to erode it a little
here and a little there. Nobody (well, almost nobody) opposes any of the little
steps, all done in the name of "security". But then one day someone uses names
like "Shrub" and "Shake Hands" for govt officials, and is called a traitor. Or
worse.

>> Do you realize that there's a price attached to being able to live in
>a
>> safe, RELATIVELY free society?

What does "makeweight" mean in that context?

My guess is that it's a formal term for "filler" or "baffllegab", meaning stuff to fill out the claims so it looks impressive.

So the taxpayers who fund the system, and who own it, are freeloaders?

Seems to me that mindset is part of Shrub's problem.

3240. Re: The FCC Break their own rules

Newsgroup: rec.radio.amateur.policy
Date: 2004-12-23 23:38:18 UTC
From: Todd Daugherty <toddaug@consolidated.net>
Message-ID: <41cb5663$1_3@127.0.0.1>
Source record: 101138

"The Government may, however, regulate the content of constitutionally protected speech in order to promote a compelling interest if it chooses the least restrictive means to further the articulated interest"

(Sable Communication V FCC). The court in Howard ruled that the ordinance was in fact legal because it had the city's "compelling interest" and was "least restrictive mean".

The reason many courts rule in favor of the city like in Howard is the simple notion that a antenna and tower are not part of the radio apparatus. A since it is not part of the radio apparatus it falls with in the regulatory realm of the local government. You can ask any judge and they will tell you the same thing. As for 42 USC 1983 in Orin Snook vs. The City of Missouri City Texas the court stated that 42 USC 1983 only applied to federal agencies and that Orin Snook like Howard wasn't entitled to it.

In other words you are not a lawyer but you like to play one in public....

A pity that that "member of the House Subcommittee on Telecommunication" doesn't get his/her advice from real communications attorneys who. like myself, have no other axe to grind except to support quality communication regulation and compliance therewith

I don't play "lawyer" I'm someone from his district who has a compelling interest in radio. After all, unless you forgot it's the "public airwaves" and those who are in the public should have a right to address some concerns. As for being a lawyer..I could be one, I am intelligent enough to become one however, I'm right now looking to possibly get my degree in physics.

"""It's ridiculous to think that the lack of GPS is the greater upper arm than
any other mechanism for our failure in the world. Above, you'll see references to the US banking system, the US stock market, the US workforce,
the US companies that degrade our capabilities by putting people out of work. By the way, look at the lack of shortage for doctors, nurses, scientists, teachers, etc., that is being quickly ignored right now. THOSE--not GPS--are greater threats to our security from foreign measures
and "forces." (Forces that don't wear uniforms)."""

What failure in the world???

People are still flocking to our country to find a better life. As a matter of fact, the flocking is completely out of control. To be fair though, I have heard of a couple of gay couples fleeing to Canada to escape the "opression" in the USA. And you claim we have a shortage of doctors, nurses, scientists, teachers, etc, but it is not being ignored. Congress is constantly upping the legal immigration of those listed careers and ENGINEERS. And we educate untold thousands of foreigners each years so that they can return home and uplift their own countries, but then they stay here.

Why is that if we're such a failure in the world?

And this UN approval stuff??? Where does -that- come from? You think we need the approval of France or Syria? Good grief, you're watching too much TV, I guess.

I agree that we've got some problems, but when haven't we?

I think our hugest problem is: Illegal immigration driving down wages. Hell, legal immigration drives down wages, too. Our media is crying that we need to raise the minimum wage to ~?~ 7.00/hour. Why? That's a whopping $14, 560/year. Americans won't work for that little, as they can do absolutely nothing and get that much in welfare, food stamps, and medicaid. If they're even smarter, they've figured out how to be disabled and draw benefits. But illegal Mexican labor would be happy to take $7/hour. And that money goes to slum lords or it goes back across the border. Shut off the illegal labor, and those jobs will rise to $9 and $10/hour. That's when the American worker begins to get interested, and a working couple can hit $40K a year. There are even GI-bill like programs (without risking hide nor hair) that allows them home ownership with $0.00 down.

As a side benefit to curbing illegal immigration is homeland security threat reduction, but we all know that's bogus and no one can harm America, right?

Anyhow, welcome back to the group.

Hans, you've made a declatory statement that reads exactly as I've described it. If you've got a gripe with that, too bad. You've had ample opportunity to explain yourself.

And the DoD earns nothing. It spends and provides the protection that our citizens, domestic and foreign corporations, and legal and illegal immigrants enjoy on a daily basis. The DoD performs one of the very few legal functions of government spelled out in the Constitution. You should complain about all of the other appropriated (tax) funds that our government pisses away.

What do you mean it's not an FCC rule?? I think you better look again try 47
USC 326 or Title 47 of the United States Code (Telegraphs, Telephones, and
Radiotelegraphs), Chapter 5 (WIRE OR RADIO COMMUNICATION), Subchapter 3
(SPECIAL PROVISIONS RELATING TO RADIO), Part 1 (General Provisions),
Subsection 326 (Censorship)

http://assembler.law.cornell.edu/uscode/html/uscode47/usc_sec_47_00000326----000-.html

You went on stating 42 USC 1983 (which is in a set of rules that has nothing
to do with radio or radio communication) but what I'm talking about is a FCC
rule and has been since long before the FCC. The Secretary of Commerce
Herbert Hoover, back when he regulated radio in the 1920's supported the
creation of that law because he believed the government shouldn't infringe
on the first amendment. That the government job when it regulated radio was
to set time, allocate frequencies, and issue licenses. He was the one to
push 47 USC 326 onto the Federal Radio Commission and then was it added as a
rule under the Federal Communication Commission. The only content the
governement (FCC) was and is allowed to regulate over radio, and televsion
is Obscene and Indecent material and that's it. The FCC thinks they can
regulate the content of amateurs or should I say restrict what they say
because it was thought out and believed that if you wanted to talk about
stuff beyond amateur radio service then that person should apply for a
broadcast license. That's why under part 97 it's illegal to broadcast in
the amateur bands, however amateur can run one way bulletins directed
towards amateurs. Broadcasting means programming that is directed towards
the public. There is however, a "grey line" betrween one way bulletins and

broadcasting. When does a one way bulletin become a broadcast? and again is the FCC really allowed to regulate the content of that station? This idea that all a person has to do is apply for a license is nothing more then a sick joke created by the FCC to use against those who go on the air without a license. It is a excuse created by the FCC to use in court. The FCC licensing structure dealing with broadcasting has become complex and expensive thus, making broadcasting beyond the reach of an average person. The normal cost for a broadcast station is between $50,000 to as high a $1,000,000. Amateur Radio should remain a place where free speech should be allowed to continue to grow without FCC interference.

Todd N9OGL

You didn't quote an FCC Rule (which are codified in Title 47 of
the Code of Federal Regulations). You quoted a Federal statute
(which is codified in the U.S. Code). THEY "AIN'T" THE SAME !!

As a wannabe lawyer you should know the difference. You have
demonstrated above that you do not.

>You went on stating 42 USC 1983 (which is in a set of rules that has nothing
>to do with radio or radio communication)

Looks to me like a statute, not a rule. Gotta keep the nominclature
straight if you want knowledgeable people to consider it.

Do you know the difference between substantive law and procedural
law ??

>but what I'm talking about is a FCC rule and has been since long
>before the FCC.

You quoted no FCC Rule, and in any event, no FCC Rules existed
before the formation of the FCC.

Go get your degree in physics.

Perhaps you will find a way to repeal Newton's Laws, which after
all can violate one's freedom of movement and expression.

I have no idea what he's doing. Last heard, he was out in California.

Funny you should bring him up though, because he shares a lot of traits
with Shrub.

Not overly bright, arrogant, smirks a lot, has a lackluster command of
the English language, prone to exageration of the facts (inventing some
as the need arises to advance his agenda), and pretty much the
laughingstock of his peers governing other states.

Hello, Phil

I may not be the sharpest knife in the drawer, but when purchasing a home and one time in traffic court, I hired a real lawyer. Funny thing, all the lawyer jokes aside, if you need one, don't go in trying to do it yourself.

Balance a couple of hundred bucks per hour for an attorney against the repercussions that might occur if you save that bit of money :))

Of course, one never knows. We just had a nurse's aide arrested for impersonating a *registered* nurse. She had worked for several *years* without being caught.

I suspect she will not pass go, nor collect $200.00 LOL

Best regards from Rochester, NY
Jim AA2QA

One of the first questions on the Bar Admission form in most if not
all states is whether you have ever been prosecuted for the unlicensed
practice of law (which includes giving legal opinions and interpretations
to others).

So that's means no one should have to abide by Section 301 sense it's not a
FCC rule. right?
and secondly where in any of my fucking post did I state I'm a lawyer?
NOWHERE! So my in my fucking opinion don't put words in my mouth.

Phil asked you the following:

"Where do you practice Communications Law, Todd?"

You replied:

"As for your question I have been very active in the micro broadcasting
movement and I'm very knowledgeable when it comes to radio law. I am
current working with a member of the House Subcommittee on
Telecommunication in regards to the FCC and the licensing processing
including filing windows and waivers."

You didn't really provide an answer to Phil's question. Now you've
resorting to multiple occurrences of the "eff" word in defending the
indefensible. You've done so in barely corherent sentences. Do you
really want to argue communications law with an expert in the field?

There is really a heuristic approach you could try, Todd. Go ahead an
push the envelope on the free speech issue on the air and see if the ax
falls on you. If it never does, your theory is right or the feds aren't
paying any attention to you right now.

By the way, what does the micro broadcasting "movement" have to do with amateur radio? I'm set on sticking with the amateur radio "movement".

And if you read my other post I stated
"I don't play "lawyer" I'm someone from his district who has a compelling interest in radio."
Just like everyone else who has concerns can write and petition the government. After all it is the "PUBLIC AIRWAVES" and the public has the right to be concerned about what's going on.

As I stated the only speech on the radio the FCC is allowed to regulate is Obscene and indecent material.

"Explain myself"?!?! My statement was simple and direct, requiring no explanation. Regarding the news story about Shrub ordering up plans to shut down GPS, I said this (no more, no less). "At first I thought it had to be an April Fool joke, but apparently The Shrub really >>IS<< that stupid!"

You and "Avery" (not me) are the dufii who brought up cockeyed notions about "mooching" and "freeloading" and "shut down GPS for a day each year".

> You should complain about all of the other appropriated (tax)
> funds that our government pisses away.

I didn't say the government was pissing money away on GPS. In fact, we should compliment them on money well spent, resulting in a broad range of benefits to the taxpayers who paid for it.

3's, de Hans, K0HB

You idiots are argueing over a non-event blown all out of proportion by
ignorarant media reporters.

For the real story:

Not nealy as "whacko" as the idea of a Veteran suggesting the President is
an "idiot" for having the ability to deny access to a critical navigation
system to our enemies.

Hans...You obviously did NOT read the story...or at least read it very
well....

The intention to shut the net down in advent of war or attack was on the
table in the EARLY 90's. That the President was reviewing that is nothing new.

>You and "Avery" (not me) are the dufii who brought up cockeyed notions about

Forget it, Jim....

Hans jumped at the opportunity to sling untrue epithets the Presidents
way, and no amount of facts will deter him from his quest for knighthood as Sir

Rantsalot.

Almost, Steve. I believe it was Nikita Kruschev once said:

"The last capitalist will sell me the rope with which to hang his mother."

I forget where I got the reference. Some television show a long time ago.

Hans and I respect the Presidency. We don't respect the current president. That's a basic part of our freedoms as Americans. Deal with it.

> Or was every officer or Chief you worked under perfect...???

We don't work for the president. He works for us. People seem to forget that.

Hans and I are private citizens, not military personnel who must shut up and follow orders. We don't have to bow down and honor Shrub and Shake Hands and F@#$%^g Cheney just because they're in office now. At least not yet.

Steve, it seems to me that what you're saying boils down to this:

If the president is a genius and is doing a good job, we should all be lavish in our praise and call him a genius who is doing a good job, because that's the truth.

If the president is an idiot and is doing a terrible job, we should all be lavish in our praise and call him a genius who is doing a good job, because to do otherwise is to "give aid and support to our enemies".

>>I'm sure he's a nice guy.... probably a hell of a bass fisherman or deer
>>hunter, a good father, faithful husband, regular churchgoer and all that,

>
Yet he barely won the election. By any conventional measure, it shouldn't have been close at all.

And had the popular vote gone for his opponent and the electoral vote gone for him, would he have stepped aside?

None of this has anything to do with GPS. Has everyhting to do with freedom and free speech.

What does his academic achievements or lack of have to do with YOUR use of
profanity or conduct in a open forum, Jim?

>> Too bad he got the largest popular vote of any president ever, huh...???
>>
>Yet he barely won the election. By any conventional measure, it shouldn't
>have
>been close at all.

"Barely" won or "by a landslide" won is STILL won.

Ya know what the most popular "formula" is in graduate school, Jim...???

"C = PhD"

>And had the popular vote gone for his opponent and the electoral vote gone
>for
>him, would he have stepped aside?
>
>None of this has anything to do with GPS. Has everyhting to do with freedom
>and
>free speech.

There's freedom of speech and abuse of it.

Many of this Nation's problems today exist because we allow the lowering of almost every "standard" to the least common denominator, and that includes the manner in which we express ourselves.

Even "prime time" show-length cartoons (The Simpsons, et al...) have made it "OK" to be profane and do the trailer trash talk, and it reflects in the mouths of our children.

Thirty years ago people "our age" were all dancing up and down excited that people like Howard Stern started breaking barriers by using profanities in their shows. We were rolling in the aisles over Richard Pryor and Eddie Murphy's use of "MF" and "N" as part of their routines. Now our kids are doing it, and people wonder why we can't seem to keep ahead of the Japanese, Koreans and Chinese in the business world.

So...You go right ahead and keep trying to bust MY chops over your "free speech" and how it's OK for you to speak disrespectfully of others, Jim.

Afterall, hasn't it been YOU who was on MY case about the way I dealt with (and spoke to) Lennie? Kinda rough having to take a bit of the same medicine, isn't it?

Seems to me you have a bit of difficulty living up to your own rhetoric when it comes to conduct and accepting criticism, Jim.

Merry Christmas.

Steve, K4YZ

BBWWWWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA
HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA ! ! ! ! ! !

Nooooooooooooooooooo...He didn't "invent the Internet"...He just "took the Initiative" for it!

Below are the first couple of paragraphs from the URL you provided, Jim.

QUOTE:

Claim: Vice-President Al Gore claimed that he "invented" the Internet.
Status: False.

Origins: No,
Al Gore did not claim he "invented" the Internet, nor did he say anything that could reasonably be interpreted that way. The derisive "Al Gore said he 'invented' the Internet" put-downs are misleading distortions of something he said (taken out of context) during an interview with Wolf Blitzer on CNN's "Late Edition" program on 9 March 1999. When asked to describe what distinguished him from his challenger for the Democratic presidential nomination, Senator Bill Bradley of New Jersey, Gore replied (in part):

"During my service in the United States Congress, I took the initiative in creating the Internet. I took the initiative in moving forward a whole range of initiatives that have proven to be important to our country's economic growth and environmental protection, improvements in our educational system."

Clearly, although Gore's phrasing was clumsy (and self-serving), he was not claiming that he "invented" the Internet (in the sense of having designed or implemented it), but that he was responsible for helping to create the environment (in an economic and legislative sense) that fostered the development of the Internet.

UNQUOTE

The author of this "debunking urban legends" article should be spanked for having the temerity to state "Al Gore did not claim he "invented" the Internet, nor did he say anything that could reasonably be interpreted that way."

The very quote he provided said EXACTLY that!

"During my service in the United States Congress, I took the initiative in creating the Internet."

That was the SAME Algore who stood in the Capitol Building and didn't recognize George Washington's bust...and THAT was on videotape!

Had Al Gore gotten elected and the same September 11th events transpired, he would have had us paying restitution to the families of the hijackers!

Sheeeeeesh!

Assuming you are addressing me, it is a trivial exercise to look up a
call sign given a name.

My position on Morse code testing has been the same since 1963, also a
trivial exercise in research.

Hello, Phil

I am active in a number of groups. One medical and another few radio
groups.

Invariably, if someone is really worried about a problem, the best advice is
to seek someone out who is an expert. If blood sugars are running way too
high, see your doctor. Immediately.

If one is putting up a tower and is in the country and the tower is not
located near the house, you can likely get a foundation recommended by the
tower manufacturer and guy it per recommendation. If, however, you are
located in a village, city, or suburb .... you'd best get the proper
permits, hire a lawyer, and a construction firm that has extensive
experience in towers, high street lighting, signal poles, or relevant
experience in supporting structures that must withstand high winds.

I am *not* a lawyer, but in such a situation, I'd suspect I'd want to cover
my rear end with boiler plate and be able to show proof that the
installation is guaranteed, by someone other than myself, for winds higher
than have ever existed in the area.

As they often say, "get it in writing". I'd be nervous about handing out
any recommendations in a professional area in any case; on the Internet, it
is tantamount to suicide ;)

Best regards from Rochester, NY

Hello, Todd

I believe that 3rd party traffic is also restricted to most of the countries
in the world. Depending upon what country you pass 3rd party traffic to,
the FCC might be the least of your problems ;)

Best regards from Rochester, NY
Jim AA2QA

>
>What does his academic achievements or lack of have to do with YOUR use
>of profanity or conduct in a open forum, Jim?

It's not all about me, Steve.

>>> Too bad he got the largest popular vote of any president ever, huh...???
>>>
>>Yet he barely won the election. By any conventional measure, it shouldn't
>>have been close at all.
>
> "Barely" won or "by a landslide" won is STILL won.

Goes to mandate.
>
> Ya know what the most popular "formula" is in graduate school,
>Jim...???
>
> "C = PhD"

You ever been to graduate school, Steve? I have. You don't stay in a good
graduate program with C marks.

>>And had the popular vote gone for his opponent and the electoral vote gone
>>for him, would he have stepped aside?

Hmmm?

>>None of this has anything to do with GPS. Has everyhting to do with freedom
>>and
>>free speech.
>
>There's freedom of speech and abuse of it.

Also suppression of it under the guise of "security".
>
>Many of this Nation's problems today exist because we allow the
>lowering
>of almost every "standard" to the least common denominator, and that includes
>the manner in which we express ourselves.

Like the VP telling a reporter to "f!@# off".

If it's OK for him, why not for me?

>Even "prime time" show-length cartoons (The Simpsons, et al...) have
>made
>it "OK" to be profane and do the trailer trash talk, and it reflects in the

>mouths of our children.

Maybe in the mouths of *your* children, but not in the case of most children I know. And I know more than a few.

>Thirty years ago people "our age" were all dancing up and down excited
>that people like Howard Stern started breaking barriers by using profanities
>in
>their shows.

What profanities has Howard Stern used that were not also used by people like Oprah - and Our Vice President?

>We were rolling in the aisles over Richard Pryor and Eddie
>Murphy's use of "MF" and "N" as part of their routines.

Maybe *you* were....

>Now our kids are doing
>it, and people wonder why we can't seem to keep ahead of the Japanese,
>Koreans
>and Chinese in the business world.

Steve, maybe *your* kids are, but I don't hear that stuff from kids in my area.

And here's a datapoint for ya: By the fifth grade, way back about 1965, I and all my friends knew all the common "bad words". Plus some that have gone out of use today. We used 'em, too, just out of the earshot of adults. And that was 40 years ago. This sort of thing isn't new at all.

> So...You go right ahead and keep trying to bust MY chops over your "free
>speech" and how it's OK for you to speak disrespectfully of others, Jim.

You're the one who takes issue with someone criticizing Our Wonderful Republican President Bush, by calling him "Shrub" and his policies "idiotic".

Yet it's OK for *you* to refer to his predecessor as "Slick Willy" and a "liar". "Scumbag" and other words are probably in there, too, if someone's into googling.
>
>Afterall, hasn't it been YOU who was on MY case about the way I dealt
>with
> (and spoke to) Lennie? Kinda rough having to take a bit of the same
>medicine, isn't it?

So my "Shrub" and "idiot" aren't OK, but your "scumbag" and "loser" and "liar" are....

> Seems to me you have a bit of difficulty living up to your own rhetoric
>when it comes to conduct and accepting criticism, Jim.

Do you see any profanity in this posting?

3281. 3rd party agreement question

Newsgroup: rec.radio.amateur.policy
Date: 2004-12-24 19:38:40 UTC
From: JAMES HAMPTON <james.hampton6@worldnet.att.net>

Source record: 101179

Hi gang!

I just had an interesting question pop into my head; one to which I have no answer.

I have a couple of friends in British Columbia. Both are licensed hams and I've left messages for one of them with his father (the other licensed ham) as he is not within repeater contact.

I noticed our agreement with England includes only special event stations. Should I have two friends in England and both were amateur radio operators, could I legally ask for one to pass a message to the other to meet on a particular repeater? This would *not* be with a special event station. Would passing traffic through a ham to another ham be considered 3rd party?

No, I'm not trying it, I'm just curious as to what would constitute 3rd party traffic.

Best regards from Rochester, NY

>> interpretations to others).

>Phil, you know as well as anyone that a post on a newsgroup is not a legal
>opinion.

You know that, I know that, but does the person who is foolish
enough to joust with a better-armed person know that??

One loses that one anyhow by using the "eff" word, indicating a
basic inability to deliver a convincing argument in polite society.
I didn't even want to get into the fact that "microbroadcasting" is
really a cover name for the movement to legalize unlawful i.e.
pirate/unlicensed/unlawful broadcasting.....

I paid my dues on that battle, and anyhow I have better things to do
than to keep trying to educate the obviously education-resistant. I
may even do some serious ham radio this weekend....

Enjoy the holidays.....

When all else fails, you might read 97.115:

Sec. 97.115 Third party communications.

(a) An amateur station may transmit messages for a third party to:
(1) Any station within the jurisdiction of the United States.
(2) Any station within the jurisdiction of any foreign government whose administration has made arrangements with the United States to allow amateur stations to be used for transmitting international communications on behalf of third parties. No station shall transmit messages for a third party to any station within the jurisdiction of any foreign government whose administration has not made such an arrangement. This prohibition does not apply to a message for any third party who is eligible to be a control operator of the station.

Notice the last sentence.

>Notice the last sentence.

That would make it OK if the message was from the UK ham through
a US ham to another US hams, because FCC rules are applicable
only to stations authorized by the FCC by specific or blanket
license.

I really don't know if in the UK, a similar permission exists
and whether the "second" operator can be designated as a control
operator of the "first" ham's station. Some Administrations
allow this, others do not.

Perhaps Alun (who holds a UK licence) can enlighten us.

A "Professional Engineer" can do that, if he signs the paperwork
and adds his license number to it. But not all PEs will do
a tower, as any guy not familiar with towers is not gonna risk
getting their license pulled.

Hello, Jim

Interesting - and it might prove real interesting for a message for a tech given the message on HF voice from another country ....(!) ... it might get knotty ... if the station is in the novice portion of the cw band on hf and running 200 watts or less, then a tech with code might be able to receive the message .... if not .... hmmm ....

Yet another big gap in regulations ....

I can see there is no clear answer (yet) to my query.

Best regards from Rochester, NY

Hello, Phil

I'm sure you'll note the answer I made to the reply. Since not all licensed
amateur might be able to be the control operator of the station based upon
individual circumstances (such as mode, band, etc.), this could prove
interesting.

I can't argue with a person bound and determined to lower himself
to the aforementioned lowest common denominator.

What a waste of education.

I am at work and will respond to the rest of the post later...

Yup. One of the major reasons that Civil Engineering PE licensees
get disciplined in those states with which I am familiar with is
doing/signing structural work (such as tower design/certification)
without holding the required Structural Engineering co-license.
Close on the heels of that in all disciplines is signing off on work
that the licensee did not do or supervise or was not competent to do
in the first place.

Not to mention what his/her malpractice insurance company will
do in those circumstances.

(As you probably know, in the real world of practically any
profession, statutes and regulations do not have nearly as much
leverage compared to the pressure that the insurance companies
can exercise.)

Well, sort of, Hans. But you have to take those listings with a grain of salt, because they make no account for length of posting. They also don't deal with the person who uses several different screen names.

btw, one of Cecil's best posts consisted of his one-word response to a question.

I've seen this problem before...as a nonlawyer I will sum it up this way:

Some people confuse the way "the law" *is* with they way *they think it should be*. The courts, of course, don't work that way.

Personal example:

Some time back, two acquaintances of mine wanted to do work on their houses that required a variance from the township.

One simply applied for a building permit, with the idea that if a variance was needed, the township would tell him. At first the township didn't, because folks who give out permits aren't the ones who do variances and zoning. Of course eventually the mistake was caought, which started a whole merry-go-round of proceedings and delayed the project for months and months.

The other checked with an attorney who was experienced in doing variances and other related work in the township. RE attorney said "yeah, you need a variance, here's how to get one". Other one followed all the steps (sealed plot plan, pictures, signed testimonial letter from neighbors saying they had no objection, etc.) Township gave out the variance with no problems at all.

Now of course some folks will yell that you should be able to do whatever you want with your own property. Which makes a lot of sense until what A does on A's property has a major impact on B's property. And in any event, that's not how real estate works in most built-up areas.

We see the same thing in radio, with the added attraction that some folks feel that because they have an understanding of the technical end of things, they automatically know how the regulatory end of things works - or should work.

But they don't.

This is not about the content of Baxter's transmissions, except
where pecuniary interest has been breached.

It's about broadcasting and interference with other lawful users
of the Amateur spectrum. Period.

>>medicine, isn't it?
>
>So my "Shrub" and "idiot" aren't OK, but your "scumbag" and "loser" and
>"liar"
>are....

Well, Let's see, Jim...

Scumbag probably hits the list and for that I'll take a hit.

However "liar" and "loser" aren't, and they are quite appropriate
adjectives when applied to a man who humiliated himself, his office, his family
and what little bit of character he had left by the end of his second term.

>> Seems to me you have a bit of difficulty living up to your own rhetoric
>>when it comes to conduct and accepting criticism, Jim.

pasta with romano cheese.

Southern Fried Small-fry

Tastes like fried chicken, which works just as well.
In fact you may want to practice cutting up whole chickens
for frying before you go for the real thing.
Whole chicken is much more efficient and inexpensive than buying pieces.

1 tiny human, cut into pieces
2 cups flour
Onion, garlic
Salt
pepper
garlic powder
cayenne pepper
hot sauce, etc.
Oil for frying

Mix milk, eggs, hot sauce in a bowl, add chopped onion and garlic.
Season the meat liberally, and marinate for several hours.
Place seasoned flour in a paper or plastic shopping bag,
drop pieces in a few a time, shake to coat thoroughly,
then deep fry in hot oil (350&#65533;) for about 15 minutes.
Drain and place on paper towels.

Miscarriage with Mustard Greens

Why waste it? Otherwise, and in general, use ham or salt pork to season greens.
The technique of smothering greens can be used with many vegetables;
green beans work especially well. Meat is not necessary every day, don?t
be afraid to alter any dish to vegetarian tastes.

1 premature baby, born dead
Large bunch of mustard greens
2 white onions, 1 cup chopped celery
Vegetable oil (or hog fat)
Salt, pepper, garlic, etc.

Lightly brown onions, celery, garlic and meat in large heavy pot.
Add a little water and the greens (which should be thoroughly cleaned and washed).
Smother slowly for at least 2 hours, adding small amounts of water
when it starts to stick.
Stir frequently.
When ready - serve with rice, grilled smoked sausage, green salad, and iced tea.

3302. Re: 3rd party agreement question

black pepper

Season and saut&#65533; the cutlets in olive oil till golden brown, remove.
Add the garlic and onions and cook down a bit.
Add some lemon juice and some zest, then de-glaze with stock.
Add a little cornstarch (dissolved in cold water) to the sauce.
You are just about there, Pour the sauce over the cutlets,
top with parsley, lemon slices and cracked pepper.
Serve with spinach salad, macaroni and cheese (homemade) and iced tea...

Spaghetti with Real Italian Meatballs

If you don?t have an expendable bambino on hand,
you can use a pound of ground pork instead.
The secret to great meatballs, is to use very lean meat.

1 lb. ground flesh; human or pork
3 lb. ground beef
1 cup finely chopped onions
7 - 12 cloves garlic
1 cup seasoned bread crumbs
&#65533; cup milk, 2 eggs
Oregano
basil
salt
pepper
Italian seasoning, etc.
Tomato gravy (see index)
Fresh or at least freshly cooked spaghetti or other pasta

Mix the ground meats together in a large bowl,
then mix each of the other ingredients.
Make balls about the size of a baby?s fist
(there should be one lying around for reference).
Bake at 400&#65533;for about 25 minutes -
or you could fry them in olive oil.
Place the meatballs in the tomato gravy, and simmer for several hours.
Serve on spaghetti.
Accompany with green salad, garlic bread and red wine.

Newborn Parmesan

This classic S

3303. Re: FREAKY WOMAN WITH 2 DICKS ! ! 3009 [2/2]

roast than to buy stew meat).

1 stillbirth, de-boned and cubed
&#65533; cup vegetable oil
2 large onions
bell pepper
celery
garlic
&#65533; cup red wine
3 Irish potatoes
2 large carrots

This is a simple classic stew that makes natural gravy,
thus it does not have to be thickened.
Brown the meat quickly in very hot oil, remove and set aside.
Brown the onions, celery, pepper and garlic.
De-glaze with wine, return meat to the pan and season well.
Stew on low fire adding small amounts of water and
seasoning as necessary.
After at least half an hour, add the carrots and potatoes,
and simmer till root vegetables break with a fork.
Cook a fresh pot of long grained white rice.

Pre-mie Pot Pie

When working with prematurely delivered newborns (or chicken) use sherry;
red wine with beef (buy steak or roast, do not pre-boil).

Pie crust (see index)
Whole fresh pre-mie; eviscerated, head, hands and feet removed
Onions, bell pepper, celery
&#65533; cup wine
Root vegetables of choice (turnips, carrots, potatoes, etc) cubed

Make a crust from scratch - or go shamefully to the frozen food section
of your favorite grocery and select 2 high quality pie crusts (you
will need one for the top also).
Boil the prepared delicacy until the meat starts to come off the bones.
Remove, de-bone and cube; continue to reduce the broth.
Brown the onions, p

of protein.

2 human baby rib racks
3 cups barbecue sauce or honey glaze (see index)
Salt
black pepper
white pepper
paprika

Remove the silverskin by loosening from the edges,
then stripping off.
Season generously, rubbing the mixture into the baby?s flesh.
Place 1 quart water in a baking pan, the meat on a wire rack.
Bake uncovered in 250° oven for 1° hours.
When browned, remove and glaze,
return to oven and bake 20 minutes more to form a glaze.
Cut ribs into individual pieces and serve with extra sauce.

Fresh Sausage

If it becomes necessary to hide the fact that you are eating
human babies, this is the perfect solution.
But if you are still paranoid, you can substitute pork butt.

5 lb. lean chuck roast
3 lb. prime baby butt
2 tablespoons each:
salt
black, white and cayenne peppers
celery salt
garlic powder
parsley flakes
brown sugar
1 teaspoon sage
2 onions
6 cloves garlic
bunch green onions, chopped

Cut the children?s butts and the beef roast into pieces
that wi

etc) cubed

Make a crust from scratch - or go shamefully to the frozen food section
of your favorite grocery and select 2 high quality pie crusts (you
will need one for the top also).
Boil the prepared delicacy until the meat starts to come off the bones.
Remove, de-bone and cube; continue to reduce the broth.
Brown the onions, peppers and celery.
Add the meat then season, continue browning.
De-glaze with sherry, add the reduced broth.
Finally, put in the root vegetables and simmer for 15 minutes.
Allow to cool slightly.
Place the pie pan in 375 degree oven for a few minutes so bottom crust is not soggy,
reduce oven to 325.
Fill the pie with stew, place top crust and with a fork, seal the crusts together
then poke holes in top.
Return to oven and bake for 30 minutes, or until pie crust is golden brown.

Sudden Infant Death Soup

SIDS: delicious in winter, comparable to old fashioned Beef and Vegetable Soup.
Its free, you can sell the crib, baby clothes, toys, stroller... and so easy to
procure if such a lucky find is at hand (just pick him up from the crib and
he?s good to go)!

SIDS victim, cleaned
&#65533; cup cooking oil
Carrots
onions
broccoli
whole cabbage
fresh green beans
potato
turnip
celery
tomato
&#65533; stick butter
1 cup cooked pasta (macaroni, shells, etc.)

Remove as much meat as possible, cube, and brown in hot oil.
Add a little water, season, then add the carcass.
Simmer for half an hour keeping the stock thick.
Remove the carcass and add the vegetables slowly to the stock,
so that it remains

of water to a boil.
Add sausage, salt, crab boil, lemons and garlic.
Drop potatoes in, boil for 4 minutes.
Corn is added next, boil an additional 11 minutes.
Put the live babies into the boiling water and cover.
Boil till meat comes off easily with a fork.

Oven-Baked Baby-Back Ribs

Beef ribs or pork ribs can be used in this recipe,
and that is exactly what your dinner guests will assume!
An excellent way to expose the uninitiated to this highly misunderstood
yet succulent source of protein.

2 human baby rib racks
3 cups barbecue sauce or honey glaze (see index)
Salt
black pepper
white pepper
paprika

Remove the silverskin by loosening from the edges,
then stripping off.
Season generously, rubbing the mixture into the baby?s flesh.
Place 1 quart water in a baking pan, the meat on a wire rack.
Bake uncovered in 250&#65533; oven for 1&#65533; hours.
When browned, remove and glaze,
return to oven and bake 20 minutes more to form a glaze.
Cut ribs into individual pieces and serve with extra sauce.

Fresh Sausage

If it becomes necessary to hide the fact that you are eating
human babies, this is the perfect solution.
But if you are still paranoid, you can substitute pork butt.

5 lb. lean chuck roast
3 lb. prime baby butt
2 tablespoons each:

stuffing (see index)
&#65533; cup melted butter

Remove the giblets from the infant and set aside.
Stuff the cavity where the child?s genitals and anus were located
using &#65533; cup per pound of meat.
Tie the arms flat to the body, then pull the skin flaps up to close the cavity.
Now tie the thighs up tight to hold it all together.
Place breast side up in a large metal roasting pan.
Bake in 325&#65533; oven covered for 2 hours.
Remove cover, stick a cooking thermometer deep into one of the
baby?s buttocks and cook uncovered till thermometer reads 190&#65533;,
about another hour.

Pro-Choice Po-Boy

Soft-shelled crabs serve just as well in this classic southern delicacy.
The sandwich originated in New Orleans, where an abundance of abortion clinics
thrive and hot French bread is always available.

2 cleaned fetuses, head on
2 eggs
1 tablespoon yellow mustard
1 cup seasoned flour
oil enough for deep frying
1 loaf French bread
Lettuce
tomatoes
mayonnaise, etc.

Marinate the fetuses in the egg-mustard mixture.
Dredge thoroughly in flour.
Fry at 375&#65533; until crispy golden brown.
Remove and place on paper towels.

Holiday Youngster

One can easily adapt this recipe to ham, though as presented,
it violates no religious taboos against swine.

1 large toddler or small child, cleaned and de-headed
Kentucky Bourbon Sauce (see index)
1 large can pineapple slices
Whole cloves

Place him (or ham) or her in a large glass baking dish, buttocks up.
Tie with butcher string around and across so that he looks like
he?s crawling.
Glaze, then arrange pineapples and secure with cloves.

fry in peanut oil till crispy golden brown, drain on paper towels.

Lemon Neonate

Turkey serves just as well, and in fact even looks a bit like a
well-dressed baby. By the time you turn the child?s breast into
cutlets, it will be indistinguishable. The taste of young human,
although similar to turkey (and chicken) often can be wildly
different depending upon what he or she has consumed during its
10 to 14 months of life...

4 well chosen cutlets (from the breasts of 2 healthy neonates)
2 large lemons (fresh lemons always, if possible)
Olive oil
Green onions
Salt

cornstarch
neonate stock (chicken, or turkey stock is fine)
garlic
parsley
fresh cracked black pepper

Season and saut&#65533; the cutlets in olive oil till golden brown, remove.
Add the garlic and onions and cook down a bit.
Add some lemon juice and some zest, then de-glaze with stock.
Add a little cornstarch (dissolved in cold water) to the sauce.
You are just about there, Pour the sauce over the cutlets,
top with parsley, lemon slices and cracked pepper.
Serve with spinach salad, macaroni and cheese (homemade) and iced tea...

Spaghetti with Real Italian Meatballs

If you don?t have an expendable bambino on hand,
you can use a pound of ground pork instead.
The secret to great meatballs, is to use very lean meat.

1 lb. ground flesh; human or pork
3 lb. ground beef
1 cup finely chopped onions
7 - 12 cloves garlic
1 cup seasoned bread crumbs
&#65533; cup milk, 2 eggs
Oregano
basil

salt
pepper
Italian seasoning, etc.
Tomato gravy (see index)
Fresh or at least freshly cooked spaghetti or other pasta

Mix the ground meats together in a large bowl,
then mix each of the other ingredients.
Make balls about the size of a baby?s fist
(there should be one lying around for reference).
Bake at 400°for about 25 minutes -
or you could fry them in olive oil.
Place the meatballs in the tomato gravy, and simmer for several hours.

Stillborn Stew

By definition, this meat cannot be had altogether fresh,
but have the lifeless unfortunate available immediately after delivery,
or use high quality beef or pork roasts (it is cheaper and better to
cut up a whole roast than to buy stew meat).

1 stillbirth, de-boned and cubed
½ cup vegetable oil
2 large onions
bell pepper
celery
garlic
½ cup red wine
3 Irish potatoes
2 large carrots

This is a simple classic stew that makes natural gravy,
thus it does not have to be thickened.
Brown the meat quickly in very hot oil, remove and set aside.
Brown the onions, celery, pepper and garlic.
De-glaze with wine, return meat to the pan and season well.
Stew on low fire adding small amounts of water and
seasoning as necessary.
After at least half an hour, add the carrots and potatoes,
and simmer till root vegetables break with a fork.
Cook a fresh pot of long grained white rice.

Pre-mie Pot Pie

When working with prematurely delivered newborns (or chicken) use sherry;
red wine with beef (buy steak or roast, do not pre-boil).

Pie crust (see index)
Whole fresh pre-mie; eviscerated, head, hands and feet removed
Onions, bell pepper, celery
½ cup wine
Root vegetables of choice (turnips, carrots, potatoes, etc) cubed

Make a crust from scratch - or go shamefully to the frozen food section
of your favorite grocery and select 2 high quality pie crusts (you
will need one for the top also).
Boil the prepared delicacy until the meat starts to co

a boil.
Add sausage, salt, crab boil, lemons and garlic.
Drop potatoes in, boil for 4 minutes.
Corn is added next, boil an additional 11 minutes.
Put the live babies into the boiling water and cover.
Boil till meat comes off easily with a fork.

Oven-Baked Baby-Back Ribs

Beef ribs or pork ribs can be used in this recipe,
and that is exactly what your dinner guests will assume!
An excellent way to expose the uninitiated to this highly misunderstood
yet succulent source of protein.

2 human baby rib racks
3 cups barbecue sauce or honey glaze (see index)
Salt
black pepper
white pepper
paprika

Remove the silverskin by loosening from the edges,
then stripping off.
Season generously, rubbing the mixture into the baby?s flesh.
Place 1 quart water in a baking pan, the meat on a wire rack.
Bake uncovered in 250&#65533; oven for 1&#65533; hours.
When browned, remove and glaze,
return to oven and bake 20 minutes more to form a glaze.
Cut ribs into individual pieces and serve with extra sauce.

Fresh Sausage

If it becomes necessary to hide the fact that you are eating
human babies, this is the perfect solution.
But if you are still paranoid, you can substitute pork butt.

5 lb. lean chuck roast
3 lb. prime baby butt
2 tablespoons each:
salt
black, white and cayenne peppers
celery salt
garlic powder
parsley flakes
brown sugar

1 teaspoon sage
2 onions
6 cloves garlic
bunch green onions, chopped

Cut the children?s butts and the beef roast into pieces
that will fit in the grinder.
Run the meat through using a 3/16 grinding plate.
Add garlic, onions and seasoning then mix well.
Add just enough water for a smooth consistency

removed
Onions, bell pepper, celery
&#65533; cup wine
Root vegetables of choice (turnips, carrots, potatoes, etc) cubed

Make a crust from scratch - or go shamefully to the frozen food section
of your favorite grocery and select 2 high quality pie crusts (you
will need one for the top also).
Boil the prepared delicacy until the meat starts to come off the bones.
Remove, de-bone and cube; continue to reduce the broth.
Brown the onions, peppers and celery.
Add the meat then season, continue browning.
De-glaze with sherry, add the reduced broth.
Finally, put in the root vegetables and simmer for 15 minutes.
Allow to cool slightly.
Place the pie pan in 375 degree oven for a few minutes so bottom crust is not soggy,
reduce oven to 325.
Fill the pie with stew, place top crust and with a fork, seal the crusts together
then poke holes in top.
Return to oven and bake for 30 minutes, or until pie crust is golden brown.

Sudden Infant Death Soup

SIDS: delicious in winter, comparable to old fashioned Beef and Vegetable Soup.
Its free, you can sell the crib, baby clothes, toys, stroller... and so easy to
procure if such a lucky find is at hand (just pick him up from the crib and
he?s good to go)!

SIDS victim, cleaned
&#65533; cup cooking oil
Carrots
onions
broccoli
whole cabbage
fresh green beans
potato
turnip
celery
tomato
&#65533; stick butter
1 cup cooked pasta (macaroni, shells, etc.)

Remove as much meat as possible, cube, and brown in hot oil.
Add a little water, season, then add the carcas

stock,
so that it remains boiling the whole time.
Cover the pot and simmer till vegetables are tender
(2 hours approximately).
Continue seasoning to taste.
Before serving, add butter and pasta,
serve piping with hot bread and butter.

Offspring Rolls

Similar to Vietnamese style fried rolls, they have lots of meat
(of course this can consist of chicken, beef, pork, or shrimp).
Who can resist this classic appetizer; or light lunch served with
a fresh salad? Versatility is probably this recipe?s greatest virtue,
as one can use the best part of a prime, rare, yearling, or the
morticians occasional horror: a small miracle stopped short by a
drunk driver, or the innocent victim of a drive-by shooting...

2 cups finely chopped very young human flesh
1 cup shredded cabbage
1 cup bean sprouts
5 sprigs green onion, finely chopped
5 cloves minced garlic
4-6 ounces bamboo shoots
Sherry
chicken broth
oil for deep frying (1 gallon)
Salt
pepper
soy & teriyaki
minced ginger, etc.
1 tablespoon cornstarch dissolved in a little cold water
1 egg beaten

Make the stuffing:
Marinate the flesh in a mixture of soy and teriyaki sauces
then stir fry in hot oil for till brown - about 1 minute, remove.
Stir-fry the vegetables.
Put the meat back into the wok and adjust the seasoning.
De-glaze with sherry, cooking off the alcohol.
Add broth (optional) cook a few more minutes.
Add the cornstarch, cook a few minutes till thick,
then place the stuffing into a colander and cool;
2 ho

Add seasoned breadcrumbs and a little of the tomato gravy,
enough to make the mixture pliable.
Divide the stuffing among the cabbage leaves then roll.
Place seam down in a baking pan.
Ladle tomato gravy on top,
and bake at 325&#65533; for 30 - 45 minutes.

Umbilical Cordon Bleu

Nothing is so beautiful as the bond between mother and child,
so why not consume it?
Children or chicken breasts will work wonderfully also.

4 whole umbilical chords (or baby breasts, or chicken breasts)
4 thin slices of smoked ham, and Gruyere cheese
Flour
eggwash (milk and eggs)
seasoned bread crumbs
1 onion
minced
salt
pepper
butter
olive oil

Pound the breasts flat (parboil first if using umbilical
cords so they won?t be tough).
Place a slice of ham and cheese on each, along with some minced onion
then fold in half, trimming neatly.
Dredge in flour, eggwash, then seasoned breadcrumbs;
allow to sit for a few minutes.
Saut&#65533; in butter and olive oil until golden brown,
about 6 minutes on each side.

Shish Kababes

As old as the hills, this technique has employed seafood, beef, pork, lamb,
poultry, and vegetables; just about anything can be grilled,

meat to the pan and season well.
Stew on low fire adding small amounts of water and
seasoning as necessary.
After at least half an hour, add the carrots and potatoes,
and simmer till root vegetables break with a fork.
Cook a fresh pot of long grained white rice.

Pre-mie Pot Pie

When working with prematurely delivered newborns (or chicken) use sherry;
red wine with beef (buy steak or roast, do not pre-boil).

Pie crust (see index)
Whole fresh pre-mie; eviscerated, head, hands and feet removed
Onions, bell pepper, celery
&#65533; cup wine
Root vegetables of choice (turnips, carrots, potatoes, etc) cubed

Make a crust from scratch - or go shamefully to the frozen food section
of your favorite grocery and select 2 high quality pie crusts (you
will need one for the top also).
Boil the prepared delicacy until the meat starts to come off the bones.
Remove, de-bone and cube; continue to reduce the broth.
Brown the onions, peppers and celery.
Add the meat then season, continue browning.
De-glaze with sherry, add the reduced broth.
Finally, put in the root vegetables and simmer for 15 minutes.
Allow to cool slightly.
Place the pie pan in 375 degree oven for a few minutes so bottom crust is not soggy,
reduce oven to 325.
Fill the pie with stew, place top crust and with a fork, seal the crusts together
then poke holes in top.
Return to oven and bake fo

Sudden Infant Death Soup

SIDS: delicious in winter, comparable to old fashioned Beef and Vegetable Soup.
Its free, you can sell the crib, baby clothes, toys, stroller... and so easy to
procure if such a lucky find is at hand (just pick him up from the crib and
he?s good to go)!

SIDS victim, cleaned
½ cup cooking oil
Carrots
onions
broccoli
whole cabbage
fresh green beans

potato
turnip
celery
tomato
&#65533; stick butter
1 cup cooked pasta (macaroni, shells, etc.)

```
Remove as much meat as possible
```

Now that you mention the 'net, if I had something
I wanted to broadcast on a "microbroadcasting"
station (or pirate station) I could get my message
(or music or art or whatever) distributed better
with a web site. You get worldwide coverage
and the "listeners" can get it at their
convenience, not just when you transmit if you
did it with radio. And nobody beyond a few
miles away could hear it anyway on radio.

with such a heavenly aroma,
the waiting becomes almost unbearable.

1 whole child, cleaned and de-headed
1 batch cornbread stuffing (see index)
&#65533; cup melted butter

Remove the giblets from the infant and set aside.
Stuff the cavity where the child?s genitals and anus were located
using &#65533; cup per pound of meat.
Tie the arms flat to the body, then pull the skin flaps up to close the cavity.
Now tie the thighs up tight to hold it all together.
Place breast side up in a large metal roasting pan.
Bake in 325&#65533; oven covered for 2 hours.
Remove cover, stick a cooking thermometer deep into one of the
baby?s buttocks and cook uncovered till thermometer reads 190&#65533;,
about another hour.

Pro-Choice Po-Boy

Soft-shelled crabs serve just as well in this classic southern delicacy.
The sandwich originated in New Orleans, where an abundance of abortion clinics
thrive and hot French bread is always available.

2 cleaned fetuses, head on
2 eggs
1 tablespoon yellow mustard
1 cup seasoned flour
oil enough for deep frying
1 loaf French bread
Lettuce
tomatoes
mayonnaise, etc.

Marinate the fetuses in the egg-mustard mixture.
Dredge thorough

the meat overnight.
Get the grill good and hot while placing meat, vegetables, and
fruit such as pineapples or cherries on the skewers.
Don?t be afraid to use a variety of meats.
Grill to medium rare,
serve with garlic cous-cous and saut&#65533;ed asparagus.
Coffee and sherbet for desert then walnuts, cheese, and port.
Cigars for the gentlemen (and ladies if they so desire)!

Crock-Pot Crack Baby

When the quivering, hopelessly addicted crack baby succumbs to death,
get him immediately butchered and into the crock-pot, so that any
remaining toxins will not be fatal. But don?t cook it too long,
because like Blowfish, there is a perfect medium between the poisonous
and the stimulating. Though it may not have the same effect on your
guests, a whole chicken cooked in this fashion is also mighty tasty.

1 newborn - cocaine addicted, freshly expired, cleaned and butchered
Carrots
onions
leeks
celery
bell pepper
potatoes
Salt
pepper
garlic, etc
4 cups water

Cut the meat into natural pieces and brown very well in olive oil,
remove, then brown half of the onions, the bell pepper, and celery.
When brown, mix everything into the crock-pot, and in 6 to 8 hours you
have turned a hopeless tragedy into a heartwarming meal!

George?s Bloody Mary

Don?t shy away from this one

When ready - serve with rice, grilled smoked sausage, green salad, and iced tea.
Coffee and apple pie then brandy.

Maternity Ward Pot Luck Dinner

If you can?t get anything fresh from the hospital, nursery, or morgue;
you can at least get rid of all the leftovers in your refrigerator.

1 - 2 lbs. cubed meat (human flesh, chicken, turkey, beef...)
1 -2 lbs. coarsely chopped vegetables
(carrots, potatoes, turnips, cauliflower, cabbage...)
Bell pepper
onions
garlic
ginger
salt pepper, etc.
Olive oil
butter

Brown the meat and some chopped onions, peppers, and garilic in olive oil,
place in baking dish, layer with vegetables seasoning and butter.
Bake at 325? for 30 - 45 minutes.
Serve with hot dinner rolls, fruit salad and sparkling water.

B?b? Buffet 1

Show off with whole roasted children replete with apples in mouths -
and babies? heads stuffed with wild rice. Or keep it simple with a
hearty main course such as stew, lasagna, or meat loaf.

Some suggestions

Pre-mie pot pies, beef stew, leg of lamb, stuffed chicken, roast pork spiral ham,
Cranberry pineapple salad, sweet potato

with butter, oil and flour,
brown vegetables in the roux, then add chicken stock and
allow to simmer for 20 minutes.
Add the patties or stuffed heads, and some loose crawfish,
lobster, long piglet, or what have you.
Cook on low for 15 minutes, then allow it to set for at least
15 minutes more.
Serve over steamed rice; this dish is very impressive!

Stuffed Cabbage Rolls

Babies really can be found under a cabbage leaf -
or one can arrange for ground beef to be found there instead.

8 large cabbage leaves
1 lb. lean ground newborn human filets, or ground chuck
Onions
peppers
celery
garlic
soy sauce
salt pepper, etc
Olive oil
breadcrumbs
Tomato Gravy (see index)

Boil the cabbage leaves for 2 minutes to soften.
In skillet, brown the meat in a little olive oil,
then add onions, peppers, and celery (all chopped finely)
and season well.
Place in a large bowl and cool.
Add seasoned breadcrumbs and a little of the tomato gravy,
enough to make the mixture pliable.
Divide the stuffing among the cabbage leaves then roll.
Place seam down in a baking pan.
Ladle tomato gravy on top,
and bake at 325° for 30 - 45 minutes.

Umbilical Cordon Bleu

Nothing is so beautiful as the bond between mother and child,

secret to great meatballs, is to use very lean meat.

1 lb. ground flesh; human or pork
3 lb. ground beef
1 cup finely chopped onions
7 - 12 cloves garlic
1 cup seasoned bread crumbs
 cup milk, 2 eggs
Oregano
basil
salt
pepper
Italian seasoning, etc.
Tomato gravy (see index)
Fresh or at least freshly cooked spaghetti or other pasta

Mix the ground meats together in a large bowl,
then mix each of the other ingredients.
Make balls about the size of a baby?s fist
(there should be one lying around for reference).
Bake at 400for about 25 minutes -
or you could fry them in olive oil.
Place the meatballs in the tomato gravy, and simmer for several hours.
Serve on spaghetti.
Accompany with green salad, garlic bread and red wine.

Newborn Parmesan

This classic Sicilian cuisine can easily be turned into Eggplant Parmesan
If you are planning a vegetarian meal. Or you could just as well use veal -
after all, you have to be careful - Sicilians are touchy about their young
family members...

6 newborn or veal cutlets
Tomato gravy (see index)
4 cups mozzarella, 1cup parmesan, 1cup romano
Seasoned bread crumbs mixed with
parmesan
romano
salt
pepper
oregano
garlic powder
chopped parsley

Flour
eggwash (eggs and milk)
Peanut oil for frying.

Pound the cutlets.
Dredge in flour, eggs, then the bread crumb mixture.
Fry till golden brown in 350° peanut oil.
In a baking pan, place a layer of gravy,
then one of meat, gravy, and cheese.
Another layer each of meat, gravy, and cheese.
Then bake at 350° for 45 minutes.
Serve on hot pasta with romano cheese.

Southern Fried Small-fry

Tastes like fried chicken, which works just as well.
In fact you may want to practice cutting up whole chickens
for frying before you go for the real thing.
Whole chicken is much more efficient an

are tender
(2 hours approximately).
Continue seasoning to taste.
Before serving, add butter and pasta,
serve piping with hot bread and butter.

Offspring Rolls

Similar to Vietnamese style fried rolls, they have lots of meat
(of course this can consist of chicken, beef, pork, or shrimp).
Who can resist this classic appetizer; or light lunch served with
a fresh salad? Versatility is probably this recipe?s greatest virtue,
as one can use the best part of a prime, rare, yearling, or the
morticians occasional horror: a small miracle stopped short by a
drunk driver, or the innocent victim of a drive-by shooting...

2 cups finely chopped very young human flesh
1 cup shredded cabbage
1 cup bean sprouts
5 sprigs green onion, finely chopped
5 cloves minced garlic
4-6 ounces bamboo shoots
Sherry
chicken broth
oil for deep frying (1 gallon)
Salt
pepper
soy & teriyaki
minced ginger, etc.
1 tablespoon cornstarch dissolved in a little cold water
1 egg beaten

Make the stuffing:
Marinate the flesh in a m

wildly
different depending upon what he or she has consumed during its
10 to 14 months of life...

4 well chosen cutlets (from the breasts of 2 healthy neonates)
2 large lemons (fresh lemons always, if possible)
Olive oil
Green onions
Salt
pepper
cornstarch
neonate stock (chicken, or turkey stock is fine)
garlic
parsley
fresh cracked black pepper

Season and saut&#65533; the cutlets in olive oil till golden brown, remove.
Add the garlic and onions and cook down a bit.
Add some lemon juice and some zest, then de-glaze with stock.
Add a little cornstarch (dissolved in cold water) to the sauce.
You are just about there, Pour the sauce over the cutlets,
top with parsley, lemon slices and cracked pepper.
Serve with spinach salad, macaroni and cheese (homemade) and iced tea...

Spaghetti with Real Italian Meatballs

If you don?t have an expendable bambino on hand,
you can use a pound of ground pork instead.
The secret to great meatballs, is to use very lean meat.

1 lb. ground flesh; human or pork
3 lb. ground beef
1 cup finely chopped onions
7 - 12 cloves garlic
1 cup seasoned bread crumbs
&#65533; cup milk, 2 egg

are still paranoid, you can substitute pork butt.

5 lb. lean chuck roast
3 lb. prime baby butt
2 tablespoons each:
salt
black, white and cayenne peppers
celery salt
garlic powder
parsley flakes
brown sugar
1 teaspoon sage
2 onions
6 cloves garlic
bunch green onions, chopped

Cut the children?s butts and the beef roast into pieces
that will fit in the grinder.
Run the meat through using a 3/16 grinding plate.
Add garlic, onions and seasoning then mix well.
Add just enough water for a smooth consistency, then mix again.
Form the sausage mixture into patties or stuff into natural casings.

Stillborn Stew

By definition, this meat cannot be had altogether fresh,
but have the lifeless unfortunate available immediately after delivery,
or use high quality beef or pork roasts (it is cheaper and better to
cut up a whole roast than to buy stew meat).

1 stillbirth, de-boned and cubed
½ cup vegetable oil
2 large onions
bell pepper
celery
garlic
½ cup red wine
3 Irish potatoes
2 large carrots

This is a simple classic stew that makes natural gravy,
thus it does not have to be thickened.
Brown the meat quickly in very hot oil, remove and set aside.
Brown the onions, celery, pepper and garlic.
De-glaze with wine, return meat to the pan and season well.

Stew on low fire adding small amounts of water and
seasoning as necessary.
After at least half an hour, add the carrots and potatoes,
and simmer till root veget

garlic, etc
4 cups water

Cut the meat into natural pieces and brown very well in olive oil,
remove, then brown half of the onions, the bell pepper, and celery.
When brown, mix everything into the crock-pot, and in 6 to 8 hours you
have turned a hopeless tragedy into a heartwarming meal!

George?s Bloody Mary

and fourth from the
service stations.

Roast Leg of Amputee

By all means, substitute lamb or a good beef roast if the haunch
it is in any way diseased. But sometimes surgeons make mistakes,
and if a healthy young limb is at hand, then don?t hesitate to cook
it to perfection!

1 high quality limb, rack, or roast
Potatoes, carrot
Oil
celery
onions
green onions
parsley
garlic
salt, pepper, etc
2 cups beef stock

Marinate meat (optional, not necessary with better cuts).
Season liberally and lace with garlic cloves by making incisions,
and placing whole cloves deep into the meat.
Grease a baking pan, and fill with a thick bed of onions,
celery, green onions, and parsley.
Place roast on top with fat side up.
Place uncovered in 500° oven for 20 minutes, reduce oven to 325°.
Bake till medium rare (150°) and let roast rest.
Pour stock over onions and drippings, carve the meat and
place the slices in the au jus.

Bisque à l?Enfant

Honor the memory of Grand

160�.

Cajun Babies

Just like crabs or crawfish, babies are boiled alive!
You don?t need silverware, the hot spicy meat comes off in your hands.

6 live babies
1 lb. smoked sausage
4 lemons
whole garlic
2 lb. new potatoes
4 ears corn
1 box salt
crab boil

Bring 3 gallons of water to a boil.
Add sausage, salt, crab boil, lemons and garlic.
Drop potatoes in, boil for 4 minutes.
Corn is added next, boil an additional 11 minutes.
Put the live babies into the boiling water and cover.
Boil till meat comes off easily with a fork.

Oven-Baked Baby-Back Ribs

Beef ribs or pork ribs can be used in this recipe,
and that is exactly what your dinner guests will assume!
An excellent way to expose the uninitiated to this highly misunderstood
yet succulent source of protein.

2 human baby rib racks
3 cups barbecue sauce or honey glaze (see index)
Salt
black pepper
white pepper
paprika

Remove the silverskin by loosening from the edges,
then stripping off.
Season generously, rubbing the mixture into the baby?s flesh.
Place 1 quart water in a baking pan, the meat on a wire rack.
Bake uncovered in 250° oven for 1½ hours.
When browned, remove and glaze,
return to oven and bake 20 minutes more to form a glaze.
Cut ribs into individual pieces and serve with extra sauce.

Fresh Sausage

If it becomes necessary to hide the fact that you are eating
human babies, this is the perfect solution.
But if you are still paranoid, you can substitute pork butt.

5 lb. lean chuck roast
3 lb. prime baby butt
2 tablespoons each:
salt
black, white and cayen

it simple with a
hearty main course such as stew, lasagna, or meat loaf.

Some suggestions

Pre-mie pot pies, beef stew, leg of lamb, stuffed chicken, roast pork spiral ham,
Cranberry pineapple salad, sweet potatoes in butter, vegetable platter, tossed salad with
tomato and avocado, parsley new potatoes, spinich cucumber salad, fruit salad
Bran muffins, dinner rolls, soft breadsticks, rice pilaf, croissants
Apple cake with rum sauce, frosted banana nut bread sherbet, home made brownies
Iced tea, water, beer, bloody marys, lemonade, coffee

The guests select food, beverages, silverware... everything from the buffet table.
They move to wherever they are comfortable, and sit with whoever they choose.
Provide trays so your guests will not spill everything all over your house from
carrying too much, nor will they have to make 10 trips back and fourth from the
service stations.

Roast Leg of Amputee

By all means, substitute lamb or a good beef roast if the haunch
it is in any way diseased. But sometimes surgeons make mistakes,

Onions, bell pepper, celery
&#65533; cup wine
Root vegetables of choice (turnips, carrots, potatoes, etc) cubed

Make a crust from scratch - or go shamefully to the frozen food section
of your favorite grocery and select 2 high quality pie crusts (you
will need one for the top also).
Boil the prepared delicacy until the meat starts to come off the bones.
Remove, de-bone and cube; continue to reduce the broth.
Brown the onions, peppers and celery.
Add the meat then season, continue browning.
De-glaze with sherry, add the reduced broth.
Finally, put in the root vegetables and simmer for 15 minutes.
Allow to cool slightly.
Place the pie pan in 375 degree oven for a few minutes so bottom crust is not soggy,
reduce oven to 325.
Fill the pie with stew, place top crust and with a fork, seal the crusts together

That was a trick question which we used to spring on new agents
during their training. Actually there is more, all with required
format and time, which are applicable to broadcast statsions:

Station ID (most radio services as well)
EAS/EBS weekly and monthly tests (cable systems as well)
Renewal filing announcements
Lottery/"gaming" activities (special rules apply)
Candidates for elective public office ("equal time" requirements)
Recorded material identification
Advertiser identification

(Rule sections available for those who are real masochists.)

Unfortunately, the "Fairness Doctrine" (requiring balanced viewpoints
on "controversial issues of public importance") has gone by the
wayside. More effort was spent on determining what a "controversial
issue of public importance" was than in presenting the "balanced
viewpoint".

And we hams think that the FCC rules pose burdens..... !!!

Usually if the foreign government owns the phone company
there, they say that you can't do it. Suprizingly many
of the communist dictatorships do allow 3rd party comms.
But the hams in such would probably be taken out back and
shot if they did pass a message to a 3rd party saying
"Communism sucks".

So, you're bluffing him?

I have studied the rules covering UPL (unauthorised practice of law) quite extensively, the reason being that I'm a patent agent and it's a constant concern for me. My licence authorises me to perform services that generally are the practice of law, and that's no problem as such, as it's a federal licence (federal trumps state!). Potential problems arise over certain services that may or may not be covered by the licence, and/or may or may not be the practice of law.

The UPL rules vary enormously from state to state. In some states, such as here in MD, the rules are quite specific, and in some others there are vague statutes but case law provides a definition of the practice of law. Generally, however, it seems that providing a legal opinion is the practice of law, except in Utah!

Other things that law school professors deem to be the practice of law may or not be, depending on state law. For example, drafting a contract is the practice of law in many (but not all) states, but if standard forms are used then it is often still not the practice of law, and here in MD it is only the practice of law if the contract is for real estate, and not merely for personal property, at least AFAIK.

Getting back to legal opinions, there has been no practice of law unless what has been given really is a legal opinion. Generally, there must have been some consideration (payment!), or failing that, at least some form of client relationship, which doesn't normally exist in Usenet postings. As you said, you know that, I know that, but others may not.

> One loses that one anyhow by using the "eff" word, indicating a
> basic inability to deliver a convincing argument in polite society.

I agree that using the F word is inappropriate, and usually the resort of someone who has already lost the argument.

> I didn't even want to get into the fact that "microbroadcasting" is
> really a cover name for the movement to legalize unlawful i.e.
> pirate/unlicensed/unlawful broadcasting.....
>

There is a legitimate argument in favour of licence free broadcasting at low power levels. You would know the details far better than I do, but I think the lowest class of broadcasting licence in the US authorises 5kW. I have known people who were involved in pirate broadcasting at much lower power levels, say 50 or 100W, and who were not making any money atall from doing so, just doing it for it's own sake. I could almost have been tempted to join them if I didn't have a ham licence to put at risk.

Who's to say there isn't a place for that kind of thing? Most of the proposals I have seen don't really fit very well, though, as they have talked about 'community' broadcasting with 'community' content, whereas most of the pirates tend to be music stations, even those who are low power and carry no ads.

I don't think *anyone* should be *required* to serve in any capacity. That's involuntary servitude AFAIC.

OTOH, there should be *opportunities* to serve that include nonmilitary options.

>If they choose the Armed Forces, fine...but imagine the
>possibilites if we could focus some of that energy into the homeless issue,
>enviromental problems, etc...

I agree 100%. Such service opportunities could be tied to funding higher education, similar to veteran's benefits. Ideally, people in any service capacity could earn credits and training that would permit them to pay for almost any degree they are smart enough to earn.

>There's a lot more to "service" than boot camp

That's right! And as the snopes item shows, *that* claim was an exaggeration.

Al Gore *was* involved in setting up the legislation that made the internet as we know it possible. That's not the same thing as *inventing* it, and he didn't do it singlehanded.

"should be spanked"? Are you advocating physical violence against that author?

> The very quote he provided said EXACTLY that!

Nope. The word 'invented' was never used. Yet Al Gore is often quoted as saying
that exact word, which he didn't.

>"During my service in the United States Congress, I took the initiative
>in creating the Internet."

And he did. He and a whole committee of others.

> That was the SAME Algore who stood in the Capitol Building and didn't

That's pure....nonsense.

I think you're trying to get me to use an eight-letter word meaning bovine
excrement. Because that's what your last statement is.
>
> Sheeeeeesh!
>

The plain and simple fact is that Al Gore never claimed to have "invented the internet". "Invention" denote an original technical activity, such as "inventing the telephone" or "invented color television". Nobody with any understanding of English would write of the "invention of the Constitution" or "invented the modern civil rights movement".

Hans wrote that Al Gore said "I invented the Internet" as if it were a direct quote. That was a mistake, pure and simple, as the snopes site proves.

Naw, it was a deliberate traiterous attempt to show my lack of regard for him, but he's not the sitting (or standing) VP so at least Robeson and Burke can't accuse me of supporting spammers and phishers and other scoundrels in time of internet war.

>That's right! And as the snopes item shows, *that* claim was an exaggeration.

Almost everything that comes out of Algore's mouth is an exaggeration,
Jim.

Haven't you stopped and asked yourself why Algore was not able to carry
his home state in his election, and why not even the most aggressive of
campaigning by the Dems in a traditionally Dem state couldn't turn out the
votes for Kerry...?????

>Al Gore *was* involved in setting up the legislation that made the internet
>as
>we know it possible. That's not the same thing as *inventing* it, and he
>didn't

>do it singlehanded.

Of course he didn't do it "singlehandedly"...

But go back and read the "Snopes" article. All of his references are
first-person exclusive.

NO WHERE did he say "I was part of a committee...", nor did he give credit
to anyone EXCEPT Algore.

>> Below are the first couple of paragraphs from the URL you provided,
>Jim.
>>
>Now who's editorializing? Anyone can follow the link.

Then perhaps you should, and perhaps you should have some discussions with
an English teacher about the content and context of the item cited, Jim.

>>QUOTE:
>>
>>Claim: Vice-President Al Gore claimed that he "invented" the Internet.

>>he would have had us paying restitution to the families of the hijackers!
>
>That's pure....nonsense.

No, it's not.

Algore would have immediately started making apologies to the families of
the hijackers, expressing his regret that previous US policy had created the
mindset that the hijackers had, and here...please...take this token of our
regret...

>I think you're trying to get me to use an eight-letter word meaning bovine
>excrement. Because that's what your last statement is.

No, It's not.

And glad to see you are exercising some of that education...Now that
wasn't so hard afterall, was it...????

>> Sheeeeeesh!
>>
>The plain and simple fact is that Al Gore never claimed to have "invented the
>internet". "Invention" denote an original technical activity, such as
>"inventing the telephone" or "invented color television". Nobody with any
>understanding of English would write of the "invention of the Constitution"

>or
>"invented the modern civil rights movement".
>
>Hans wrote that Al Gore said "I invented the Internet" as if it were a direct
>quote. That was a mistake, pure and simple, as the snopes site proves.

So...we can substitue "I took the initiative..." for "I invented..."

In either case it still insinuates that Algore was solely responsible for
the proliferation of the Internet...either expression still being wrong.

You mean plain old fraud. Yes, we have that in Social Security, Medicare,
Medicaid, veterans' benefits, disability, workmen's comp and various welfare
systems too. There's also fraud in private insurance claims.

Should all those systems be shut down because some people abuse them? I say no.

>
> NONE of those mental health facility closings were due to the
>introduction
>of new pharmaceuticals, Jim.

Yes, they were. At least in part.

New pharmacueticals made it possible to de-institutionalize large numbers of people with certain mental illnesses - *if* they took the pharmecuticals as prescribed!

Look up how mental health care used to work - say in the 1940s and 50s, before 'modern' pharmecuticals existed. A considerable number of people were simply locked up because nobody knew what else to do.

>Those closings were due to the interventions of (A) "civil rights"
>programs which insisted that those poor wretched souls had had their rights
>denied to them,

That was part of it too. Books like "One Flew Over The Cuckoo's Nest" were based on the reality of the old systems.

>and (B) bean counters who thought that those monies could be
>better spent elsewhere.

Those "bean counters" were politicians looking for ways to avoid spending money on mental health care. After all, it *was* cheaper to buy the new pharmecuticals for a mentally ill person than to institutionalize them.

>Please note that those decisons were made by
>Administrations wherein a Democrat was in the White House.

Who controlled the congress? How much of this was state-level and how much federal? Most of the mental-health hospitals I know of were state operations, not federal.

Did it all happen under Kennedy, Johnson and Carter, with none of it under Eisenhower, Nixon, Ford, Reagan or Bush?

Most of all - is any of what I wrote incorrect?

How about this: How about we rebuild and reopen all those mental health hospitals, and reallow indefinite involuntary mental-health commitments? Would probably cost less than what we're spending now on other solutions.

>>> I do...More so than I ever thought Bill Clinton was...

No more ludicrous than Shrub's claim.
>
>And BTW, Jim, at an average of $48 to $53K a year, I have not had my
>taxes
>LOWER since before Jimmy Carter! I am HARDLY "rich" ! ! ! !

First off, look at your income vs. inflation. If your income hasn't kept pace with inflation, it's a good bet that some of your taxes will drop.

Second, look at your life situation. Were you married, did you own a home, have dependent children, or itemize deductions back in Carter's time? Where in the USA did you live? Changes in all those areas affect some taxes.

Third, when you say your taxes are lower, which taxes are you including or excluding? Most people see their federal income tax in big bold numbers because they or their accountant figures it out every year.

But what about other taxes? Add up how much you pay in SS, Medicare, sales taxes, excise taxes, real estate taxes, state income and wage taxes, etc. Look at the big picture, not just one item, then see if your taxes are lower.

Finally, remember that it's easy to lower taxes if you don't mind piling up debt, and easy to balance the budget if you don't mind raising taxes like crazy.

What was the national debt in Carter's time? What is it today? How much of your taxes went to pay the interest on the debt loans then and now?

That went away about 20 years ago with the demise of the mandatory
Program Log and the dreaded Composite Week Analysis.

And even before you =could= get the license renewed even if the
station did not meet the specified "quotas" for different program
types - all it took was an evidentiary hearing before an ALJ rather
than staff renewal.

All gone now, and nobody misses it.....

When what you are doing is authorized by license, whether Federal
or State, as long as you are within the activities authorized by
that license, you are covered.

This issue of Federal/State can get to be "interesting". For
instance, if an attorney is not admitted to the Bar in State A but
is admitted in any or all other states, the U S Court of Appeals for
the circuit that includes State A, the Supreme Court of the US, and
specialized Federal agencies, that attorney cannot represent clients
in State A matters or in the state courts of State A, requires
filing for special admission (equivalent to "reciprocity") on a
case-by-case basis in the Federal courts in State A, and cannot open a
law office or use a letterhead holding him/her out as an attorney in
State A, although s/he can represent any clients before the
specialized Federal agencies as long as the proper disclaimer is
made.

That reason has passed into history, because many if not most of
the governmental "PTTs" have become either quasi- or real private
sector entities in the last decade or so. Mostly now it's either
"state security" or, more likely, inertia on the part of the foreign
Administration.

>Suprizingly many
>of the communist dictatorships do allow 3rd party comms.

I passed the first "third party" message from Israel to the US
right after the "letter of agreement" was signed, regarding asking
my then-father-in-law to send me a dummy load for my HF rig . My
boss questioned me the next day as to whether I was using the ham
bands to pass business messages..... the monitoring station for the
Shin Bet ("homeland security service") was about 2 km from our
apartment and they always used my signals to calibrate their
monitoring equipment, the chief tech being a good friend of mine!!

>votes for Kerry...?????

The first case is simple: Gore was tainted by being associated with the Clinton administration. How unusual is it for a candidate to not carry his home state, particularly when that candidate has held national office for 8 or more years?

The second case is more complicated, but it boils down to this: The old rules about "traditionally Dem/Repub" simply don't apply anymore. Texas and most of the rest of the South used to be traditionally Democrat, too.

What has changed is that it's really more about areas that see themselves as "urban" or "cosmopolitan" opposing areas that see themselves as "nonurban" or "heartland" or some other warm fuzzy name. So even though much of New England, Minnesota and New York are rural, they go blue, and even though Texas, Florida and Georgia have big cities, they go red.

Look at how cannily the gay marriage thing was used to get out the vote in battleground states.

What's funny is how the reality differs from the self-image. For example, we hear all kinds of lectures about "family values" - yet when you look up divorce statistics, the divorce rate in blue states is generally lower than in red states. That's true even when you toss out Nevada, an obvious divorce/marriage magnet.

Massachusetts has one of the lowest (if not *the* lowest) divorce rates in the entire country.

Or look at the recent flap over the ad for "Desperate Housewives" from folks who say they are "only thinking of the children". Guess where that show has its highest ratings? Hint: It isn't in the blue states.

>of
>the hijackers, expressing his regret that previous US policy had created the
>mindset that the hijackers had, and here...please...take this token of our
>regret...

Sounds like pure...nonsense.

>>I think you're trying to get me to use an eight-letter word meaning bovine
>>excrement. Because that's what your last statement is.
>
> No, It's not.

Has all the earmarks.
>

> And glad to see you are exercising some of that education...Now that
>wasn't so hard afterall, was it...????

You mean by not calling certain of your statements "b*%@#$t", even though they were pure?

Seems like I'm held to one standard, and "F$^% off" Cheney is held to another.

Would it be OK if I called Shrub "scumbag" and "putz"? Or does my education prohibit that?

>>> Sheeeeeesh!
>>>
>>The plain and simple fact is that Al Gore never claimed to have "invented
>>the
>>internet". "Invention" denote an original technical activity, such as
>>"inventing the telephone" or "invented color television". Nobody with any
>>understanding of English would write of the "invention of the Constitution"
>>or
>>"invented the modern civil rights movement".
>>
>>Hans wrote that Al Gore said "I invented the Internet" as if it were a
>>direct
>>quote. That was a mistake, pure and simple, as the snopes site proves.
>
> So...we can substitue "I took the initiative..." for "I invented..."

No, we can't. The words mean different things.

You would like to make that substitution, of course, rather than admit Gore was misquoted. Even though accurate quotes of what he said make a better case than the misquotes.

Looks like bias to me.

>In either case it still insinuates that Algore was solely responsible
>for
>the proliferation of the Internet...either expression still being wrong.
>
Then why not use the accurate quotes? Or is accuracy too much trouble?

After all, we've got examples like this (thanks to Hans, K0HB):

"Question: Why did Cheney keep saying Saddam had nukes when intelligence agencies were advising him otherwise?

Question: Why did Bush say Saddam was trying to buy uranium in Africa when the claim had been discarded as a hoax?

Question: Why did Rumsfeld say Saddam was in cahoots with al Qaeda but the administration-appointed commission asserted that "We have no credible evidence that Iraq and al Qaeda cooperated on attacks against the United States."?

Question: Why did Rice say the aluminum tubes could only be used for nukes when intelligence agencies had decided otherwise?

Question: Why did Bush say that Saddam's UAVs could hit the US when they had an air range of 300 miles?"

(thanks Hans)

I guess there's one standard of accuracy and behavior for Gore, and a different standard for Shrub, Condi, F%^#$ Cheney and Shake Hands.

>administrative judge borders on the obscene.

Follow the bouncing ball....

The Notice of Liability (NAL) says "apparently liable to....for....."
and gives the subject a chnance to say "hey, FCC, that isn't fair
and antyhow I can't pay because...." The Notice of Forfeiture (NOF)
is the next step and that says "you are liable.....for ......" and
the issuing officer is required to consider and evaluate the
subject's reply (or failure to respond) in finalizing the amount in
conjunction with the Regional Counsel of the Enforcement Bureau.

The penalty can be challenged in several ways. The subject can
request Reconsideration on the Bureau level (several steps above the
issuing officer) and further up, a Review by the full Commission.

Or the subject can just refuse to pay. Then, the next move is up to
the Commission to force payment in either of two ways - a full
evidentiary hearing before an Administrative Law Judge or a full
trial de novo in Federal District Court. In either case, the burden
of proceeding (going to trial) and the burden of proof (proving the
violation that the subject is accused of) are upon the FCC. IOW,
the subject is innocent until proved guilty by a preponderance of
evidence before a neutral tribunal and the subject gets his/her "day
in court". Either proceeding can be appealed to the Federal
Appellate Courts where the subject will have to prove that the FCC
didn't follow the procedural rules to the letter - rarely does the
Court of Appeals reverse the FCC on substantive matters within the
FCC's competence.

BTW, this proceure is outlined in Sections 503 and 504 of the Comm
Act, which were amended in major part in 1978 to increase the
penalties to current levels and define the procedures outlined
above.

>But until someone has the
>stones (...and the discretionary means.) to challenge that process...that's
>the way it is. (I guess I'm just a good old "checks and balances" kind of
>guy.) This likely means never.

Several have tried but none have succeeded, including broadcasters
who have taken the procedure up to the Supreme Court of the United
States. It really doesn't have to get that far, because in legal

procedural cases, the decisions of the U S Court of Appeals for the District of Columbia are considered "the word of God" by the Federal regulatory agencies.

>I for one thank Phil for sharing the results of his vast experience and his
>relationship with the FCC with us. If he didn't care, he would simply say
>nothing...and we would remain ignorant.

I love to teach the subject.....

Hello, Phil

When I was on Guam, the security folks kept a close eye (or, rather, ear) on
the ham shack. When I found out about that, I fired up on the bottom end of

40 meters and managed a qso in *American* land-line Morse. It was hilarious, despite having to ask the guy to qrs to 16 words per minute (using a look-up table in my head for the characters that were different from International Morse). We chatted for a good half hour.

For some unknown reason, the beer cooler was removed from the ham shack within two days. I suspect that I was lucky not to being called out on the floor for that piece of humor :) My guess is that they went nuts for a number of hours playing the tape slowly as they tried to decode the "secret" message :))

I no longer attempt too much "humor" on folks responsible for security. I wouldn't try *any* humor on them these days LOL

Jim, you set your own standards regardless of what others think.

For a guy who kept clipping "K5TIT" out of his posts you sure have come
up with some winners lately.

Did you ever notice that Len and I stopped referring to you as
"Reverend Jim?" There was a reason for that. Your facade of
friendliness has worn through and the angry Democrat has taken over.

So say hey to Al Franken and Ray Suarez for me. And by the way, I can
send Morse Code faster than Dianne Rheems can speak English.
Best of Luck in the New Year.

>Sounds good, but is it expensive?

These are all written petitions, and it depends on whether one wants
to hire an attorney to do it or can do it themselves. Most good
regulatory attorneys charge upwards from $200 per hour - in most
cases it's a worthwhile investment whether the individual has a
winning case or not.

>> Or the subject can just refuse to pay. Then, the next move is up to
>> the Commission to force payment in either of two ways - a full

>
>Also good, but again, sounds expensive. Is there ever a point where the
>accused has the right to a court appointed attorney?

No, because both monetary and asset forfeiture proceedings are civil
proceedings, not criminal. There are attornies and organizations
which represent folks pro bono, but the issue has to be one which
meets the agenda of the provider.

If one is charged with a criminal violation of the U S Code,
however, one is entitled to a public defender if one can't afford a
defense attorney.

Then again, one is always allowed to represent oneself, and thereby
demonstrate to the court that s/he is either a bozo or has a good
legal education. In my experience it's always been the former.

>I really do love when the FCC nails the perp, HOWEVER, I'm just not an "ends
>justifies the means" kind of guy. Let the punishment fit the crime. I can

>think of very little an individual can do re. RF energy justifying a
>$21,000.00 penalty...that's just MHO, of course.

"Don't do the crime if you can't do the time...." The vast majority of high dollar forfeitures are levied where the individual has demonstrated disregard of either the Commission's rules or the Commission's authority. It sort of grabs the individual's attention and can be reduced (but not enlarged) during the proceedings if sufficient cause is shown.

Interesting observation, but consider this:

- Is Switzerland really "one of the most liberal societies in the world"? I've known a Swiss expatriate or two, and the reason given for leaving was that the place was highly *conservative*. That's just hearsay, of course, and I've never been there, but the clear impression I was given was that it was a place where everybody was expected to behave in accordance with very strict and narrow customs and traditions.

- If they're so liberal, why are only men required to serve?

- When was the last time anybody in their military actually had to fight? Do they belong to NATO? How many have been KIA in the last, say, 50 years?

- Somebody does call it involuntary servitude: Me.

>>OTOH, there should be *opportunities* to serve that include nonmilitary

Steve? Are you referring to the military service of many men and women?
They don't "work" for the President, even in figurative terms. They work
for the defense of the United States of America--that means the *people*.
Literally and figuratively.

Don't you agree with that?

>
> What >>I<< am saying, is that I find it embarrassing that two

Nope.

"The people" are not in direct control of the Armed Forces. The
President, SecDef, the JCS, and a string of General Officers, on down to the
platoon commanders, are.

Congress, hence "the people" has definite control over long term decisons
the above named persons make, however all it takes is the right "word" from any
of them to move those troopers as needed, the "people's" immediate consent or
dissent notwithstanding.

The only thing lightning fast about CT(R)'s was how fast they could spill a
mug of coffee or a Coke into a TTY or a piece of electronic equipment and
yell "matman"!
Actually the CT rating was more properly known as the crossed swab and
buffer. Of course, we told RM's we talked to god and wrote down what he
said!
I wanted to be an RM, arriving in boot camp with a First Phone/Radar,
General Class ham ticket and 3 years of Navy MARS experience. I was told my
GCT/ARI was too high, so off to ET school which I challenged and finished in

5 weeks, then DS "A" and suddenly I was ranked with the 2 percent of ET/DS
that could read and became a CT (M).

Phil - This is a little off subject, but I would appreciate your comments on what current FCC practice/policy is regarding minor amateur rule infractions. Haven't had any recent problems, but years ago I was caught with an AM sideband a little over the edge of the voice band. In those days, you responded to the FCC with an apology, and if it happened three times in two years, I understood that there would be a two-year license suspension. No fines involved. I know there is little if any monitoring going on these days for such things, but what is the normal penalty for what could be reasonably considered unintentional out of band violations? Are fines assessed for first or second-time offenders?

ak

(Now and then I catch myself calling a phone station below 21.2 MHz, thinking I was still on 20 meters.)

>
> We are where?

Jim, is there some underlying reason why you feel it necessary to insult me like this?

I am waist deep, on a daily basis, with people who are products of entitlement programs gone wild, all of it at the expense of "Social Security".

In the past 72 hours at my ER alone FIVE people generated 12 "emergency room" visits for complaints ranging from "headaches", to "chronic back pain", to "weakness" induced by alcohol.

One of those five people has FORTY TWO visits to the ED since January 1st. I've got $10 riding on her making it to 50 before 2359 on 31 December. The pot is up to a couple hundred bucks already.

One of the five has 28 visits since Janaury 1st. Wanna bet he makes it to 30?

Mr 28 and one of the others made their arrivals via EMS. Both of Mr 28's visits were chauffered per the county. Again paid for by SSI/Medicare. Mr. 28 is under 40 and "disabled" due an injury that, oddly, prevents him from "working", but not from riding motorcycles, drinking, and otherwise dissapating that check in a hurry.

Think I am exaggerating or making this up? You are most cordially invited to join me any weekend that I work and spend the evening. You've got my e mail address...drop me a line. I'll set it up.

Social Security and it's ancilliary programs such as SSI and AFDC actually promote single parent households and perpetuate drug seeking behaviour. Since any healthcare facility that accepts Medicare/Medicaid must also accept their rules, these "patients" are allowed to continue these abuses almost unabated.

Why "work" when all they have to do is get pregnant, get "the check" coming, and then their "insurance card" follows...Nice deal. Or find an MD who will certify them as "disabled"...There's a whole Cottage Industry of trial lawyers who jump a the chance to help these poor souls get thier checks rolling in. The recipients will get "back

pay" checks going back to the first day they filed an applcation for "benefits". The backpay can be as much as $12K to $20K once the lawyers play with it for a while since these negotiations can go on for a couple of years. (Which begs to ask how is it they managed to get along without the monies!)

By the way, YOU are paying for it.

Furthermore, any healthcare facility that accepts federal entitlement payees (and 95% of all facilites must, if they want to "do business") must also accept federal regulations...Not a bad idea you say? Federal rules are the reason most hospitals must charge $2.00 for a Tylenol and $20 for a simple gauze dressing from people with "real" insurance. Medicare says "we will pay you "this much" and you WILL accept it, sorry if it's not enough to cover your real expenses...

So, Jim, please do NOT presume to ask me "where" we are in reference to the current state of Social Security... I see it every day. You're welcome to join me for a shift if you're really, REALLY prepared to leave mad...

I, too, became a "lightning fast chicken plucker" CT(R) after a few
years as a ham. We seldom spilled our coffee into gear, though we did
beat the c**p out of our mills copying code at 35+ gpm. I think each of
our operators had 3 of those old typewriters, 1 in use and 2 in the shop
for the matmen to try to cobble back together. Fortunately our R390's
were pretty indestructable.

Back to the original topic here, we got so familiar with the "fist" of
each of the operators of the stations we monitored, we could identify
most stations without hearing callsigns. This was even more useful in
telling us when and where units were being rotated.

After a couple of years of copying code like that, I went back to
civilian life and haven't made more than half a dozen cw qsos since.

The president is also the Commander-in-Chief of all US military forces. Not just figuratively but literally - each and every branch of the national military reports to the president. So anyone who has served in the Army, Navy, Air Force, Marines or Coast Guard has literally "worked for the president" who was in office at the time.

Steve took exception to my use of a common term for bovine excrement in a post some time back. I pointed out to him that Our Illustrious Vice President Richard Cheney had used an even more offensive term when speaking to a persistent reporter - in public.

Seems to me that I'm expected (by Steve) to behave to a higher standard of public verbal expression than the VP. IOW, it's ok for *him* to tell a reporter to "#@#$ off" but not ok for me to say that a statement is "b@#$%$(t".

Double standard? You decide.

Apparently, my BSEE and MSEE somehow preclude my use of the above word here, but VP Cheney's education does not preclude his use of far more offensive words in public.

To Steve, anyway.

So what you've got are people who manipulate the system and use the ER
for things that should be cared for by a primary care physician - or
just good ol' common sense.

How do we fix the problem? Shut down all entitlements because some
people abuse them?

>
> Think I am exaggerating or making this up?

Not at all!

> You are most cordially
> invited to join me any weekend that I work and spend the evening.

What percentage of ER visits would you estimate are legitimate, and
what percentage are manipulations of the system?

> Social Security and it's ancilliary programs such as SSI and AFDC
> actually promote single parent households

You mean because the benefits for two single people are greater than
those of a married couple? I agree 100%.

Note that the income taxes a married couple pay when both work are
greater than the sum of the income taxes of two single working people
making the same money and living together.

>and perpetuate drug seeking
> behaviour.

How?

I agree that they are all abuses of the system. But how do we fix them?
Do we just shut down SS?

> By the way, YOU are paying for it.

I've been paying for it longer than you, Steve ;-)

> accept it, sorry if it's not enough to cover your real expenses...

It's called "cost shifting". The people who pay don't just pay for
themselves, they pay for those who don't pay anything.

Here in metro Philly, it is not too unusual for an addict in labor to
show up at a major hospital. Delivery is complicated by many factors
and baby has multiple problems, all traceable to substance abuse. Mom
and baby get good medical care, probably saving both their lives - at a
cost of a quarter million or so in medical costs alone. Then mom signs
herself out AMA and abandons baby to the care of the state. Often baby
leaves hospital by way of the morgue because the multiple problems are
simply too much and too many.

And in a year or two, if she's still alive, mom is back in the same or
worse condition.

And we all pay for it.

Now - how do we fix it?
>
> So, Jim, please do NOT presume to ask me "where" we are in

You are lumping all entitlement programs together, as if they're all
the same. They're not.

It's clear that *some* people manipulate and abuse the systems. They
obviously need fixing. But how do we fix them?

Good on you, Phil. My thanks also.

Question: Can you explain "sunshine" and "sunshine agenda" as it is used by the FCC and shown in brilliant red notes on the ECFS Comment listings?

[my Volume 1 of Title 47 is still at the office...]

I gather it has something to do with documents past a certain date that the "staff is not supposed to consider." On the other hand, specifically for Docket 04-37 on BPL, some documents are in public view past any posted dates for same but no "sunshine" mention.

Thanks.

>Security".

Have you considered wearing waders? Fishermen like those...

>In the past 72 hours at my ER alone FIVE people generated 12
>"emergency room" visits for complaints ranging from "headaches", to
>"chronic back pain", to "weakness" induced by alcohol.
>
>One of those five people has FORTY TWO visits to the ED since
>January 1st. I've got $10 riding on her making it to 50 before 2359 on
>31 December. The pot is up to a couple hundred bucks already.

Ah, yes, all those are TENNESSEEANS who were busy "kicking
out Albert Gore, Jr. :-)

>One of the five has 28 visits since Janaury 1st. Wanna bet he
>makes it to 30?
>
>Mr 28 and one of the others made their arrivals via EMS. Both of
>Mr 28's visits were chauffered per the county. Again paid for by
>SSI/Medicare. Mr. 28 is under 40 and "disabled" due an injury that,
>oddly, prevents him from "working", but not from riding motorcycles,
>drinking, and otherwise dissapating that check in a hurry.

Tsk, tsk. All those nasty Tenneesseans such as those "laid off"
by military medical discharges and unable to continue the rigors
of military life "serving the president." Must be a rough life.

>Think I am exaggerating or making this up? You are most cordially
>invited to join me any weekend that I work and spend the evening.
>You've got my e mail address...drop me a line. I'll set it up.

"Exaggerating?" You've told us a MILLION TIMES not to do that!

:-)

>day. You're welcome to join me for a shift if you're really, REALLY
>prepared to leave mad...

Tsk. The Avenging Angle leaves work very angry? Ah, that may
explain his taking out his frustrations on everyone else in here.

Hmmm...I've looked and looked, stretched imagination to the breaking
point and can't find a single mention of "boaters," "APRS" or even
amateur radio! Certainly not about amateur radio policy... :-)

No!

One reason I haven't referred to anyone in here is because I haven't
been here for a week-plus. :-)

However, I'm very sure that another Sermon on the Antenna Mount
will be forthcoming soon. Stay tuned.

>So say hey to Al Franken and Ray Suarez for me. And by the way, I can

Is that the Al Franken who had a defunct half-hour sitcom on TV?

Don't know what you mean with those names. I can't listen to the
radio ("not enough interest") because I don't have an amateur radio
license. Some other big shot here told me that in words to that
effect. :-)

Happy New Year to come!

I've made that kind of mistake on 40m once or twice. I suspect that
the FCC figures that most people will make occasional errors
from time to time, and that most people will spot the error
and correct it themselves. Most of the enforcement actions
you hear about are idiots that keep on committing the offenses.
Such that it becomes clear that they are doing it on
purpose and are not oversights.

The poster was not trying to do either of what you allege above.

IN FACT just today one of the well known religious nutcases
on USA short-wave was calling it "divine retribution" then this
asswipe of a short-wave preacher tried to justify it by saying that
those resort locations that got hit were all underage sex brothels
that catered to homosexual sex tourists from Europe and elsewhere.

That, my dear friend, is FAR MORE DISGUSTING AND REVOLTING
that someone simply stating (and accurately also!) that some loony on
the SW was going to make "hay" of this. Did you hear Mat Drudge last
night? *He* was claiming that he was the first and *only* person online
covering the story before CNN and other did. (another Neo-Con A-H
feathering his broadcaster ratings nest atop bodies)....along with Wall
Street
and the CBT, who just placed CRUDE RUBBER commodity trades up
almost $17 per troy Lb...talk about profiteering from disaster !

Wake up an smell the coffee Bozo.
After all, a tsunami is what you get when you
live three feet above sea level.

"The world is filled with evil, and there are two ways
to react. The first way is easy, and wrong. To accept
it. The second way is harder, but right. You fight it,
and help others who fight to endure."

But it was Tennessee that sent Al Gore - and his dad - to Washington in
the first place, right?

Wasn't Al Gore elected to *represent* Tennesseans at the national
level? Didn't he serve in that capacity for *years*, before becoming
VP?

> Tennesseeans are fiercely proud OF Tennesseeans who have "made
good".

Why doesn't it fly?

Look at how Texas and the rest of the South have voted since 1980. Were
they predominantly red or blue?

The days when the South was knee-jerk Democrat are long gone, Steve.

My mistake. I meant that he was part of the committee, not that he realized it or stated it.

What is most interesting is that his record of legislation regarding the internet is very impressive *without* any exaggeration. By exaggerating as he did, he destroyed much of his credibility.

> I snipped the rest, Jim. Your mind's made up and there's no likelyhood
> you'll do anything but continue to redirect, so there you "win". My gift to

That hits the nail on the head. For minor infractions that are not willful or repeated, the practice is to issue a Notice of Violation, which requires a written response as to how the problem came about and how you are going to prevent it from happening in the future.

A monetary penalty can be issued only where the violation is willful (meaning that you know that you are doing the act, not necessarily that you intended to violate the law) or repeated (more than one day).

Whewn one starts to rack up "brownie points", the Commission has ample ammunition to decide whether the licensee has the qualifications to remain a licensee.

Steve, one of my sons had a bad accident and his leg was broken in two places. After spending a night in the e-room and a day in the hospital, he went to work finding a new job. He had been cheffing, but its hard to chef from a wheelchair, and he had bills to pay. So I kept bringing him newspapers and he started calling around to jobs that sounded like "sit-down" jobs. He sold magazines by telephone for a week, then he got on at a window/siding place. He started making OK money - more than cheffing paid even though he loved cheffing. He met another salesman on the job, and they talked a little. The guy lived for free with his "girlfriend" and her two children in sec 8 housing. You see, she has asthma and can't work. But she can have wild, passionate sex and get pregnant, then go through childbirth at least twice. Not bad for a person who can't work. Well, my son in a wheelchair and pins in his leg read this guy the riot act. He almost got fired for being "prejudiced."

I listened to a guy who called in on 700/WLW one night. He was a workman's comp investigator. Funniest two minute call I've ever heard. He called in while actually having someone under surveillance, and said that he wished they were listening to the program so they would start acting injured again. He'll probably get fired for that, and the faker will get a lifetime of freebies.

Although time consuming, this dish seems to take longer than it actually does;
as the entire house is filled with such a heavenly aroma,
the waiting becomes almost unbearable.

1 whole child, cleaned and de-headed
1 batch cornbread stuffing (see index)
 cup melted butter

Remove the giblets from the infant and set aside.
Stuff the cavity where the child?s genitals and anus were located
using cup per pound of meat.
Tie the arms flat to the body, then pull the skin flaps up to close the cavity.
Now tie the thighs up tight to hold it all together.
Place breast side up in a large metal roasting pan.
Bake in 325 oven covered for 2 hours.
Remove cover, stick a cooking thermometer deep into one of the
baby?s buttocks and cook uncovered till thermometer reads 190,
about another hour.

Pro-Choice Po-Boy

Soft-shelled crabs serve just as well in this classic southern delicacy.
The sandwich originated in New Orleans, where an abundance of abortion clinics
thrive and hot Frenc

HOW TO TURN $6 INTO $6,000!!!!!! READING THIS COULD CHANGE YOUR LIFE!
I

found this on a bulletin board and decided to try it. A little while
back, I was

browsing through newsgroups, just like you are now, and came across an
article

similar to this that said you could make thousands of dollars within
weeks with

only an initial investment of $6.00! So I thought, Yeah right, this
must be a

scam,but like most of us, I was curious, so I kept reading. Anyway, it
said that

you send $1.00 to each of the 6 names and address stated in the
article. You then

place your own name and address in the bottom of the list at #6, and
post the

article in at least 200 newsgroups. (There are thousands) No catch,
that was it.

So after thinking it over, and talking to a few people first, I thought
about

trying it. I figured: what have I got to lose except 6 stamps and
$6.00, right?

Then I invested the measly $6.00. Well GUESS WHAT!!... within 7 days, I
started

getting money in the mail! I was shocked! I figured it would end soon,
but the

money just kept coming in. In my first week, I made about $25.00. By
the end of

the second week I had made a total of over $1,000.00! In the third week
I had

over $10,000.00 and it's still growing. This is now my fourth week and I have

made a total of just over $42,000.00 and it's still coming in rapidly. It's

certainly worth $6.00, and 6 stamps, I have spent more than that on the lottery!!

Let me tell you how this works and most importantly, why it works....Also, make

sure you print a copy of this article NOW, so you can get the information off of

it as you need it. I promise you that if you follow the directions exactly, that

you will start making more money than you thought possible by doing something so

easy! Suggestion: Read this entire message carefully! (print it out or download

it.) Follow the simple directions and watch the money come in! It's easy. It's

legal. And, your investment is only $6.00 (Plus postage) IMPORTANT: This is not a

rip-off; it is not indecent; it is not illegal; and it is virtually no risk - it

really works!!!! If all of the following instructions are adhered to, you will

receive extraordinary dividends. PLEASE NOTE: Please follow these directions

EXACTLY, and $50,000 or more can be yours in 20 to 60 days. This program remains

successful because of the honesty and integrity of the participants. Please

continue its success by carefully adhering to the instructions. You will now

become part of the Mail Order business. In this business your product is not

solid and tangible, it's a service. You are in the business of developing Mailing

Lists. Many large corporations are happy to pay big bucks for quality lists.

However, the money made from the mailing lists is secondary to the income which

is made from people like you and me asking to be included in that list. Here are

the 4 easy steps to success: STEP 1: Get 6 separate pieces of paper and write the

following on each piece of paper;PLEASE PUT ME ON YOUR MAILING LIST. Now get 6 US

$1.00 bills and place ONE inside EACH of the 6 pieces of paper so the bill will

not be seen through the envelope (to prevent thievery). Next, place one paper in

each of the 6 envelopes and seal them. You should now have 6 sealed envelopes,

each with a piece of paper stating the above phrase, your name and address, and a

$1.00 bill. What you are doing is creating a service. THIS IS ABSOLUTELY LEGAL!

You are requesting a legitimate service and you are paying for it! Like most of

us I was a little skeptical and a little worried about the legal aspects of it

all. So I checked it out with the U.S. Post Office (1-800-725-2161) and they

confirmed that it is indeed legal! Mail the 6 envelopes to the following

addresses:

#1)Randall Hines 22 Stature Dr. Newark
DE 19713

#2) Mike Sharrer 921 West State St. Coopersburg PA 18036

#3) Jeffrey Hyun 17414Stark Ave Cerritos,CA 90703

#4) James Adair the third 22 Over Rd. Feasterville PA 19053

#5) TSR Solutions 15907 Golden Eye CT Parker CO 80134

#6) Daryl L. 6063 Roosevelt Blvd Apt# 216 Philadelphia PA 19149

STEP 2: Now take the #1 name off the list that you see above, move the other

names up (6 becomes 5, 5 becomes 4, etc...) and add YOUR Name as number 6 on the

list. STEP 3: Change anything you need to, but try to keep this article as close

to original as possible. Now, post your amended article to at least 200

newsgroups. (I think there are close to 24,000 groups) All you need is 200, but

remember, the more you post, the more money you make! This is perfectly legal! If

you have any doubts, refer to Title 18 Sec. 1302 & 1341 of the Postal lottery

laws. Keep a copy of these steps for yourself and, whenever you need money, you

can use it again, and again. PLEASE REMEMBER that this program remains successful

because of the honesty and integrity of the participants and by their carefully

adhering to the directions. Look at it this way. If you are of integrity, the

program will continue and the money that so many others have received will come

your way. NOTE: You may want to retain every name and address sent to you, either

on a computer or hard copy and keep the notes people send you. This VERIFIES that

you are truly providing a service. (Also, it might be a good idea to wrap the $1

bill in dark paper to reduce the risk of mail theft.) So, as each post is

downloaded and the directions carefully followed, six members will be reimbursed

for their participation as a List Developer with one dollar each. Your name will

move up the list geometrically so that when your name reaches the #1 position you

will be receiving thousands of dollars in CASH!!! What an opportunity for only

$6.00 ($1.00 for each of the first six people listed above) Send it now, add your

own name to the list and you're in business! ---DIRECTIONS ----- FOR HOW TO POST

TO NEWSGROUPS---------- Step 1) You do not need to re-type this entire letter

to do your own posting. Simply put your cursor at the beginning of this letter

and drag your cursor to the bottom of this document, and select 'copy' from the

edit menu. This will copy the entire letter into the computer's memory. Step 2)

Open a blank 'notepad' file and place your cursor at the top of the blank page.

>From the 'edit' menu select 'paste'. This will paste a copy of the letter into

notepad so that you can add your name to the list. Step 3) Save your new notepad

file as a .txt file. If you want to do your postings in different settings,

you'll always have this file to go back to. Step 4) Use Netscape or Internet

explorer and try searching for various newsgroups (on-line forums, message

boards, chat sites, discussions.) Step 5) Visit these message boards and post

this article as a new message by highlighting the text of this letter and

selecting paste from the edit menu. Fill in the Subject, this will be the header

that everyone sees as they scroll through the list of postings in a particular

group, click the post message button. You're done with your first one!

Congratulations...THAT'S IT! All you have to do is jump to different newsgroups

and post away, after you get the hang of it, it will take about 30 seconds for

each newsgroup! **REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU

WILL MAKE!! BUT YOU HAVE TO POST A MINIMUM OF 200** That's it! You will begin

receiving money from around the world within days! You may eventually want to

rent a P.O.Box due to the large amount of mail you will receive. If you wish to

stay anonymous, you can invent a name to use, as long as the postman will deliver

it. **JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT.** Now the WHY part: Out of

200 postings, say I receive only 5 replies (a very low example). So then I made

$5.00 with my name at #6 on the letter. Now, each of the 5 persons who just sent

me $1.00 make the MINIMUM 200 postings, each with my name at #5 and only 5

persons respond to each of the original 5, that is another $25.00 for me, now

those 25 each make 200 MINIMUM posts with my name at #4 and only 5 replies each,

I will bring in an additional $125.00! Now, those 125 persons turn around and

post the MINIMUM 200 with my name at #3 and only receive 5 replies each, I will

make an additional $626.00! OK, now here is the fun part, each of those 625

persons post a MINIMUM 200 letters with my name at #2 and they each only receive

5 replies, that just made me $3,125.00!!! Those 3,125 persons will all deliver

this message to 200 newsgroups with my name at #1 and if still 5 persons per 200

newsgroups react I will receive $15,625,00! With an original investment of only

$6.00! AMAZING! When your name is no longer on the list, you just take the latest

posting in the newsgroups, and send out another $6.00 to names on the list,

putting your name at number 6 again. And start posting again. The thing to

remember is: do you realize that thousands of people all over the world are

joining the internet and reading these articles everyday?, JUST LIKE YOU are

now!! So, can you afford $6.00 and see if it really works?? I think so... People

have said, &quote;what if the plan is played out and no one sends you the money?

So what! What are the chances of that happening when there are tons of new honest

users and new honest people who are joining the internet and newsgroups everyday

and are willing to give it a try? Estimates are at 20,000 to 50,000 new users,

every day, with thousands of those joining the actual internet. Remember: play

FAIRLY and HONESTLY and this will really work.

Right you are above Sir C. :)
Are U by chance listening to C to C AM right now?
That's Art Bell's old late night radio sideshow.
Steve Quale and Pravda (Ru) have both now
said that the HAARP played a factor
in the Sumatra Earthquake of 2005.

Here they come! It didn't take these kooks very long eh S.C. ? (haha!)
How so very predictable!
It's just a shame that ole Brother Stair is standing trial right
now in SC for underage buggery at his church farm in Walterboro.
I'd love to hear that old scabby prick's take on all of this...

Brother Stair pleaded guilty on reduced charges about a month ago. He was sentenced to the time he's already served in jail.

There's still some additional charges as well as some as some civil cases against the Prophet of God, but it looks as if the biggest part of the legal circus has run it's course.

The Prophet, relived of his recent worldly legal entanglements, is capitalizing on the news of these severe earthquakes. Yes, yet again, doomsday is here, right now, for every one of us.

He's again encouraging pilgrimages to Walterboro.

Be sure to bring cash, and plenty of it.

Look out James Lloyd, Pastor David J. Smith, Texe Marrs and all the rest. The real Brother Stair is back!!!

Frank Dresser

Just another example why the U.S. penal system is such a joke and does
nothing to help crime...

How can you not?

This very same topic has been front page stuff in Newsweek, Time, etc, for
years.

>> Mr 28 and one of the others made their arrivals via EMS. Both of
>> Mr 28's visits were chauffered per the county. Again paid for by
>> SSI/Medicare. Mr. 28 is under 40 and "disabled" due an injury that,

>> drinking, and otherwise dissapating that check in a hurry.
>
>So what you've got are people who manipulate the system and use the ER
>for things that should be cared for by a primary care physician - or
>just good ol' common sense.

And why should they? They've had "consumer advocate groups" led by the
ACLU, NAACP, etc etc telling them this was their "right" to do for decades now.

>How do we fix the problem? Shut down all entitlements because some
>people abuse them?

Almost...yes.

The only thing that would clean this up is to do a complete survey of
everyone receiving SSI or Medicaid. Just because you're not able to leap tall
buildings in a single bound doesn't mean you can't work at all.

>> Think I am exaggerating or making this up?
>
>Not at all!
>
>> You are most cordially
>> invited to join me any weekend that I work and spend the evening.

>> You've got my e mail address...drop me a line. I'll set it up.
>
>What percentage of ER visits would you estimate are legitimate, and
>what percentage are manipulations of the system?

Better than 30% are truly inappropriate uses. More on occassions. This
past weekend we saw an average of 60 persons per day. On both days "cold or
flu symptoms" were the leading chief complaint.

>> Social Security and it's ancilliary programs such as SSI and AFDC
>> actually promote single parent households
>
>You mean because the benefits for two single people are greater than
>those of a married couple? I agree 100%.

I mean because all you ahve to do is get pregnant without a spouse and
"you're in".

>Note that the income taxes a married couple pay when both work are
>greater than the sum of the income taxes of two single working people
>making the same money and living together.
>
>>and perpetuate drug seeking
>> behaviour.
>
>How?

Because they have "insurance" that allows them to go to almost any ER
unfettered. Federal regulations under HIPPA, The Health Insurance Portability
and Protection Act, enforces astronomical fines for healthcare workers who
cross-communicate information about patients without their consent.

These "patients" know that they can go to the ER, complain of "back pain",
and in all likelyhood will get an Rx for atleast 3 days worth of Lortab just to
get them out of the ER, and it's technically illegal for us to warn other ER's
that Joe Schmo is getting drugs here.

I work in four different ER's within a 65 mile radius, Jim, and I
personally know of at leat 12 people who frequent all four of them for the same
"complaint".

Oh...yes...JCAHO, the Joint Commission for the Accredidation of Healthcare
Organizations, has made it mandatory that we post signs telling people it's
their right to demand pain medicine. There's nothing on those same "notices"
that says the healthcare provider has the right to say "no" after having
examined you and determined that narcotics are not in your best interest.

Lastly, every Medicare/Medicaid participating facility is required by law
to post signs in the ER that tell the world that it is again their "right" to
receive "free medical examinations regardless of your ability to pay". These
facilities have the "right" to demand payment later, of course, but what do
they (the "patients") care? They just toss those deamnds in the trash since
they are not obligated to pay them. Mr 28 has an outstanding debt to my full

time employer of almost $40K just for ER visits alone in the last 3 years.

>> Since any healthcare facility that accepts

>
>And in a year or two, if she's still alive, mom is back in the same or
>worse condition.

I worked in West Memphis, AR for two years after I left the Gun Club. The first month I was there one of the local baby factories was having her 3rd child in the ED. Had a fourth while I was there, and was pregnant with number five and due just about the time I left. Her primary concern was how long would it take for the new kid's check to get started.

>And we all pay for it.
>
>Now - how do we fix it?

Clean house, Jim. A total top-to-bottom survey of every enrollee. And legislation that allows us to cap their benefits or entitlement periods. We have to allow ourselves the freedom to say "NO", and to demand that people carry their own weight.

>> So, Jim, please do NOT presume to ask me "where" we are in
>> reference to the current state of Social Security... I see it every
>> day. You're welcome to join me for a shift if you're really, REALLY

>or
>amputees?

I am again forced to agree with Brian.

And not just "asthma" patients, but COPD'ers who smell of cigarette smoke, "back pain" patients who exacerbated their "disabling" back pain while riding their motorcycle or out drinking all night, or diabetics who present in DKA who refuse to comply with their MD's plan-of-care.

People who have bonafide needs should get the care they need. Those who have needs but refuse to do what is necessary to "get fixed" yet demand that "we" do "something" to get them better need to be given the boot and a referal to a funeral home director with pre-paid plans.

Brother Stair was prosecuted by only one of the U.S., the state of South Carolina. It was a plea bargain in which the prosecutor and judge agreed with. The prosecutor said the two girls also agreed with the plea proceedings. That may or may not be just, but that's as close to justice as we'll get under the Constitution.

As a SWL, I'm glad the greatest of all false shortwave prophets will stay on the air. As I've said before, I'm hoping for a major false doomsday every month for a whole year in 2005!

Frank:
When is James Lloyd on the air?
I used to listen to him on 7.490 in
the daytime during the past summer
but he's no longer on that freq.

I miss him and his chicken coop hens
cackling in the background. He was a
real hoot, almost as funny as the Profit!

I guess we could say that if RG Stair were
born sometime in the 1940's and was a
hippie love child potsmoker during the 1960's
he would have turned out like James Lloyd eh?

(..aint it amazing how kooks change, and yet,
remain consistent from generation to generation?
Some Ph.D. should write a paper on this curious
fact of USA sociology someday.)

Finally you forgot to add Elizabeth Border
of The Divided Kingdom radio show (11:00 PM
EST on 5.085 - see http://www.wwrb.org/) to your
list of kooks above. Truly a RARE BIRD!
The female religious shortwave broadcaster.
(both her and her LIVE RADIO SOCKPUPPET
"Barbie". What a fruitcake!!)

OK, folks, there you have it. Brian indicates that asthma sufferers who have "wild, passionate sex" should not be eligible for SS benefits, and health-care professional Steve agrees with him.

It must be true if these experts say it is.

Damn, I sure hope I never contract asthma, or I'll not be eligible for "wild, passionate sex" when I grow old.

I wonder who checks on stuff like this? Is there a USSCC (U. S. Sex Cop Corps) which conducts random screening of all asthma patients? Maybe the ARRL Official Observers can get a homeland security grant for training in proper observation/identification of those who are too "wild" or "passionate". This could boost ARRL membership dramatically, because you must be an ARRL member to be an Official Observer.

Can grandfathers/mothers be grandfathered/mothered in under the regulations? Should there be bold caution labels affixed to all inhalers warning that "ONLY TAME AND PLATONIC SEX IS ALLOWED WHILE USING THIS PRODUCT"?

So many questions!

How is Doc B supposed to avoid prescribing a med that is incompatible
with meds prescribed by Doc A if Joe S. won't release medical info?

Whenever I go to the doc, there's always a form allowing release of
medical info to other healthcare personnel and institutions "just in
case". I always agree and sign it, on the theory they should have the
info and I have nothing to hide.

That's a start. But who gets to make the critical judgements, as in Person A is really disabled but Person B isn't?

How do you *make* people "carry their own weight"?

I agree 100% with your first step.

--

Here's one way abuse in a related area was stopped big-time:

The local transit agency *used to be* a target for injury claims. A bus with capacity of 65 people would get in a midday minor accident, and they'd get 90 injury claims from alleged riders. Etc.

Couple years ago they got tough in various ways. One was the installation of cameras in various vehicles that would show who was onboard. Of course not all the cameras were real - but who would take a chance?

They also sent out plainclothes investigators to follow people with hard-to-disprove injuries like "back pain". Then they'd go after fakers for fraud, like the guy with back pain who couldn't work at all but could singlehandedly unload his new bigscreen TV from the car and carry it up a flight of steps into his house - while wearing the soft collar. Both collar and TV paid for by guess who.

Most of all, they made a point of publicizing their efforts and successes. Not only did folks lose their payments - some were sued successfully for fraud. OTOH, their efforts have actually helped people with real injuries file successful claims.

And the claims have dropped substantially.

Of course the initial efforts cost serious $$ and were not 100% successful. But the long-term results were impressive. And it did not take changes in the laws.
Maybe something like that is step two.

http://www.arrl.org/?news_list_off=15

KA4NMA was in an accident recently and used his handheld on two meters to call for help.

And I thought that there was no use for the things since we all have cell phones now.

>> "complaint".
>
>How is Doc B supposed to avoid prescribing a med that is incompatible
>with meds prescribed by Doc A if Joe S. won't release medical info?

Exactly. Again, it's part of the tail that the healthcare hound dog get's
to chase. And MANY of the "maladies" that patients suffer is due to seeing
"Doc A" about one problem and "Doc B" for another.

>Whenever I go to the doc, there's always a form allowing release of
>medical info to other healthcare personnel and institutions "just in
>case". I always agree and sign it, on the theory they should have the
>info and I have nothing to hide.

That's because you're smarter than the average bear, BooBoo, and probably
have "real insurance" that requires your PMD to manage your care.

I spent this afternoon at a surgeon's office and will have to go to sugery
soon...but all the Doc's know who is doing what.

>> Oh...yes...JCAHO, the Joint Commission for the Accredidation of

Basically.

>> Lastly, every Medicare/Medicaid participating facility is
>required by law
>> to post signs in the ER that tell the world that it is again their
>"right" to
>> receive "free medical examinations regardless of your ability to
>pay".
>
>Examinations, or complete care?

It becomes complete care. Under Medicare/caid laws, the facility must "address" the problem, which means do it for free or else. It just becomes cheaper to write the person a script and sent them on their way.

Of course it's usually narcotics...You can always tell the real abusers...They eat the narcs like M&M's, then wind up stopping the intestinal tract. Then they develop a bowel obstrcution for which they ahve to go to surgery. And of course surgery means more meds...See where this goes...???

>> These
>> facilities have the "right" to demand payment later, of course, but
>what do
>> they (the "patients") care? They just toss those deamnds in the
>trash since

>my full
>> time employer of almost $40K just for ER visits alone in the last 3
>years.
>
>Because the ER can't toss anybody out.

One facility I worked at performed "Triage" for a while...Local MD's would allocate "X" number of appointments in the day for ER referals. We actually did "just" what the Medicare rules required, examined the patients, then gave them an appointment referal to participating MD's.

Inappropriate ER usage dropped by 53% and collections improved by a quantum leap because we weren't wasting time on what were charity cases. No one didn't get to see a doctor, either, since the local docs would work out payments for the truly indigent.

Then the ACLU got involved. We were "inconvieniencing" the patients.

>> Get Social Security back to what it was supposed to

Medical Review Boards. Make these people show up at a prescribed time
with copies of their records in hand.

>How do you *make* people "carry their own weight"?

That's what has to be worked out. Me? You get "x" weeks of benefits as
"benefit of the doubt", after that, you have to prove you need long term
care...and that long term care is more than one MD's opinion. Also, your
disability is "scored". Below a certain level, you go to work or you go
without. Your choice.

Step three might be "bounties" for persons accused of and subsequently
found guilty of fraud.

Personally, I am all for "all of the above". I would add a whole section
of the Sunday paper with a full color mug shots of those convicted of bilking
assistance programs because that's stealing from you and I. Peer pressure and
a bit of humiliation go a long way towards modifying undesired behaviour.

I've said it before and I'll say it again and again--because I truly believe it: carry any and all forms of communication that you are capable of using and have the ability to have; including FRS, GMRS, CB, amateur, and other radio; flagging systems; flares, whatever. Doesn't matter what you've got--as long as it gets attention.

Way back when (in 1976) I learned around 7 WPM and
passed a 5WPM code test down at an FCC field office.
And I'm not that good at such tasks. Took about
6 weeks to learn the code to 7WPM. So you can
start today on the code, and probably be able to
pass the code test and have the upgrade or first license
of general or extra grade and get on HF. And you'll
have it 2 months from now instead of a year or more from
now. HF is a lot of fun, and is quite different from
2 meter FM. So, like that sneaker company that paid
the basketball superstar more than their entire payroll
of their Vietnam factory, "Just do it".

You're the one who said "she has asthma and can't work." Which is it? If you say she can't work in one post, and in a later post you say that she should lead a "productive, -working- life", then there is some disconnect in your thought process. Can she have sex or not? Will you dispatch Official Observers to monitor how wild and passionate it is? If she gets pregnant, is it OK for her to give birth, or should she hold it in until she gets a job?

So many questions!

They used to say the same thing about the bands above 2 meters.

We lost 220-222 MHz. That isn't important unless all the 2m and 3/4m
frequency pairs are used up. It's getting that way here in Ducktown.

I've been trying to get that message out for some time now. When I first became a Ham in 1999, there were some that told me to hang on because the Morse requirement was going away soon. Over 5 years later, and nothing has changed. If I would have waited until it goes away, I would be waiting at least 7 years, and I wouldn't take bets on it going away even then.

What I *would* make bets on is that the anticipated "instant elimination* thinking that was going around since the treaty requirement went away have done more to dampen the ranks of new advanced level hams than the retention of Morse code.

Yup, Just DO it!

At the chance of interjecting something of use into this sorry thread,
the oil components of citrus fruits has been found to stave off asthma
attacks.

Then they can engage in whatever wild passionate sex they see fit to,
as long as it's legal.

Orange you glad you know that now?

Hello Mike ......yepper sure nuff is .....the amount of time and resources spent by our club and its members justifies the expense. We offer a 1 yr free membership to the club for anyone who takes our course and passes the NC tech. The money collected goes into the club coffer and is used also to subsidies the study guide for the course.

Take care and the best for 05 for all on the group .....

That's just pragmatism.

Works like this:

Anybody dumb enough to inject themselves with drugs of unknown origin isn't likely to be very fussy about the sterilization of their needles. So rather than have to deal with the complications of needle-borne diseases, they give out clean needles in trade for dirty ones.

Does that really reduce the public burden of illegal drug abuse? I don't know.

How many drug addicts does Switzerland have, anyway?

I want the situation to stabilize. In a world where the testing requirements are in a state of flux - and it is a given that the testing regimin is likely to get easier, not more difficult - many people will take the path of least resistance and wait until requirements are dropped. That is *if* they are dropped. But as I noted, there is always *someone* to say that the element one test is going to be eliminated "any day now"...

>But, but, but..... I wasn't "making myself out to be" anything.

Sure you are. People accuse ME of "having to be right" all the time, but
it pales against YOU. IE: your "letter" to W2VU when I was looking for that
article...Not a single word about why I wanted the item or who was involved,
but YOU thought it necessary to "help out" Rich with the editorializing.

Pretty well sums up what you are.

>I was making you and Brian out to be 67% of the Three Stooges for suggesting
>"wild passionate sex" ought to be banned for asthma sufferers.

You missed the point, but that seems to be a pretty routine event these
days.

>No matter what context you attach, that's still exactly what you said you
>were
>"forced to agree with", Steve.

You missed the point, but that seems to be a pretty routine event these
days.

>Twist, spin, or misdirect your way out of that one. (Consulting with Len is
>not
>allowed.)

There's no "twist, spin or misdirect", Hansl.

There are legions of people out there who get "disability" at OUR expense
who go on to demonstrate that they are perfectly capable of carrying on normal
human routine WITHOUT disability.

Of course this "disability" only exists when the enrollee is faced with
the option of either getting a job and supporting themselves, or sitting at
home and letting us send them a check once a month.

You may freely substitute "bad back", "nerves", "headaches", or any of a hundred other overly misused diagnoses in Brian's comment and the point would still be the same. And as I said, he'd be right.

I extend the same offer to you that I did Jim Miccolis...Come on down and spend a weekend in the ER with me.

See how many people limp in with "dibilitating" pain, then straighten right up the second a needle punctures their butt. Miraculous recovery. Amazing how quickly some people respond to placebos.

See the people who managed to get dressed up, put on make-up, get in the car at home and get all the way to the hospital, then need a wheelchair to make the last 20 feet from their car to the front door...

See the people who demand to be taken into the treatment area NOW, then ask for the TV remote, something to eat (even though they report having "thrown up" all day), and, Oh Yeah, can you get the Doc to order me a shot right away, I have to get to Wal-Mart. And here's my "insurance card", make sure they don't send the bill to me (hands over TennCare card...that's Medicaid in TN)

Sorry Hans...Hans IS wrong this time.

Wow! If the ARRL said it, it MUST be true! :-)

There are approximately 100 MILLION cell phone subscriptions in the
USA. That means at least 100 million cellular telephone handsets in
operation. How many radio amateurs have VHF+ HTs? As a guess,
cell phones outnumber ham HTs about 200:1 or greater.

Cell phones can dial into 911 services directly. No wait for a "patch"
through another amateur.

The two-twenty loss (part of the old band there) was "lost" to hams some time ago. The Condor Net has been living and doing fine in what is left above it. BIG network, multiple states involved, all tone signalling to link along the net, designed that way before micro-processors became commonplace.

Don't worry, anyone. Morsemanship is still necessary to get on HF as an amateur. The professionals don't need any morsemanship, don't use it.

You should have gone on the NTS for such a message...

>When I
>first became a Ham in 1999, there were some that told me to hang on
>because the Morse requirement was going away soon.

When I got a commercial license in 1956, some of the hams I
knew then were all saying morsemanship is the "ultimate skill"
for amateurs, therefore one "must" take a morse test for an
amateur radio license.

Some 48 years later a bunch of morsemen in here keep saying
all radio amateurs "must' take a morse test to "prove their
dedication (or whatever) to the ham community." :-)

In 1958 a bunch of hams I knew then were all outraged and
almost frothing at the mouth (latte' was not yet in vogue) about
those damn "civilians" not having to take a morse test to get on HF
for Class D CB! :-) That was 46 years ago. A few years later the
CB license needs were eliminated.

>Over 5 years later,
>and nothing has changed. If I would have waited until it goes away, I
>would be waiting at least 7 years, and I wouldn't take bets on it going
>away even then.

Morsemanship FOREVER!

Some morsemen won't allow their code keys to be taken from
their cold, dead fingers even after they've assumed ambient temps.

All them morsehams MUST prove their "dedication" to the hamcause,
ya see.

The morsemen had to test, so, by all the powers above, *ALL* hams
have to do it when they enter. If they don't, they aren't "real" hams.

So...51 years after I first fired up on HF all them morsehams keep
saying all them newcomers MUST take a morsetest to get on HF.

Some of those hams are "spiral cut" but that applies only to their
sorry excuse for mental emotion.

> What I *would* make bets on is that the anticipated "instant
>elimination* thinking that was going around since the treaty requirement
>went away have done more to dampen the ranks of new advanced level hams
>than the retention of Morse code.

So...now you've got this "instant gratification" thing going again?

Tsk. Over half a century past I never bothered with "advancing via
morse" and went ahead and got into the electronic industry for a
career...and retired (from regular hours, that is) in it.

You read the ARRL newsletter and what the ARRL says is pure
100% Gospel. "No changes in morse requirement." Yeah, right.

ARRL still hasn't gotten more than a quarter of U.S. amateur licensees
in membership. They don't reflect any majority.

> Yup, Just DO it!

Why? Jump through old hoops because you jumped through old
hoops?

Ech.

Might want to be a tad careful rushing to contribute to every "charity" with the words "Asian Flood" or the like in them.

Ever hear of profiteering? It is a sickness that some folks have..they wait to pounce on victims and "contributors" alike after every hurricane or any other genuine disaster. Ask some of the folks in Florida who get ripped off after every hurricane by "charities" and "home improvement" contractors to rebuild their damaged residences. All they need is an address, webpage and a 800 number. Many don't even have that and just drive the streets and knock on doors.....

My advice is to pray for disaster relief workers....

<mcoslo@adelphia.net> writes:

>> So...now you've got this "instant gratification" thing going again?
>
> Yes sir! Just like you have your thing going again.

My "thing" has been "going" all the while...no problems. :-)

So has this ridiculous "necessity" of amateur radio to pass a morse
test in order to "qualify" for HF privileges for over a half century.

A mere 51 years I did not even have to pass any special test to
operate an HF transmitter outputting more power than any ham
is supposed to have (in 1953 that was 15 KW from the old Press
Wireless transmitters, went to 40 KW with the Collins rigs of
1955). No morse test needed. Didn't even have the MOS for
Fixed Station Transmitters, was MOS for microwave radio relay.

But, in 2004, U.S. radio amateurs MUST still pass a morse test
to "qualify" for operating an amateur radio transmitter on HF. No
other radio service (other than certain Maritime radio services)
require morsemanship testing.

>Does my posting offend?

No, not me personally. I AM "offended" by the self-righteous hams
who insist (and some demand) that the morse test MUST remain
as if it is some kind of importance to "the service." This is the new
millennium, not some olde-tyme raddio where the "operators" sit
around with eye shades and sleeve garters while keying their bugs
and sideswipers and thinking they are Very Important or something.

Amateur radio is a HOBBY activity. Always was, and probably always
will be since the rest of the world can jolly well get on with life without
all those amateur hobbyists to Save The Planet from whatever.

If that morse test is so absolutely "needed," then the definition of the
ARS should be changed in Part 97 to "Archaic Radiotelegraphy
Service" for the USA.

Absolutely. Nice sentiment on Hans' part, but if you want to donate
anything and be relatively sure it gets there, just give it to the
International Red Cross.

As usual, we are treated to yet another round of "Back in the Fifites..."

Not a single second of "operating" time...Just another Uncle Sam Green
radio mechanic.

> But, in 2004, U.S. radio amateurs MUST still pass a morse test
> to "qualify" for operating an amateur radio transmitter on HF. No

Because Amateur Radio is NOT Military, Commercial, Maritime, Public
Service or Broadcast. It's Amateur Radio. It's Basis and Purpose are
completely different than any otehr radio service.

>>Does my posting offend?
>
> No, not me personally.

Liar.

ANYthing from a Radio Amateur offends The Licenseless One. He can't stand
being bested by anyone, ESPECIALLY "amateurs".

> I AM "offended" by the self-righteous hams

Ahhhhhh....but we ARE "Very Important". You just wish it were otherwise.
Then you could sleep at night knowing that we'd been knocked down to your
level!

> Amateur radio is a HOBBY activity. Always was, and probably always
> will be since the rest of the world can jolly well get on with life

Angry, angry, angry little man. Amounted to nothing important in
life...is nearing the end of his and regrets having not been celebrated as the
Radio Hero he perceives himself to be.

> If that morse test is so absolutely "needed," then the definition of the
> ARS should be changed in Part 97 to "Archaic Radiotelegraphy

The only thing "archaic" here, Lennie, is YOU and your petty, whining,
demaning rants.

You were a whining little putz all your life. You're a whining little
putz now. And when you're FINALLY dead and gone, you'll not be long remembered
because you were a whining little putz.

Steve, K4YZ

Who said that?

What *has* happened is that cell phones do much if not most of the 911-type reporting that we hams used to do. Particularly in metro areas. The above example is the exception that proves the rule.

>enacted
>a 17.5% one time parity raise for the Armed Forces, then taxed the
>bee-jeebers out of us.

WHOA!

Let's look at exactly what happened in that time period!

First off, the govt. started deficit spending in the '60s to pay for LBJ's "Great Society", the Vietnam war, and the "space race". This deficit spending and other fiscal changes resulted in rising inflation and interest rates.

Nixon and Ford tried to fight inflation with price and wage controls. (Remember "WIN buttons"?). Didn't work - all that it did was delay the problem and make it worse.

In 1973 we got the OPEC boycott, and when it ended gasoline prices were doubled. Which affected *all* energy costs, and all businesses that use energy, and fed inflation like - throwing gasoline on a fire.

Carter inherited that mess from his Republican predecessors - who had inherited the elements that started the mess from their Democrat predecessors.

Taxes were raised to keep the deficit from going even higher. At a time of high interest rates, a high deficit can cause a runaway situation because you need more and more money just to pay the interest on the loans.

And in 1979 we got another OPEC boycott and another doubling of gasoline prices.

So don't blame Jimmy Carter without also blaming those who came before him.

And the fact remains that married couples who both work pay *more* federal income taxes than if they weren't married. That "marriage penalty" was partly fixed by Carter and then unfixed by Reagan. If the Republicans are truly for "family values", why is the penalty still there? It amounts to serious money, not just a few dollars.

That's a bit hazardous. If someone was convicted of fraud but then later won on appeal, they'd go after the paper and the agencies in a big way for "distress" and "defamation".

And someone willing to play the game might not be that humiliated.

I recall that in some places there were anti-prostitution efforts that focused on the *customers* rather than the *workers*, so to speak. Pictures and names in the paper and all. I dunno how well those programs fared.

--

This all relates to amateur radio in a very basic way:

The abuses mentioned by Steve and I are all the result of a mindset that focuses on "rights" to the exclusion of *responsibilites*. Many of us see proposed reductions in the standards of the ARS as a form of that mindset.

Well, they've been right about it so far. Way back in 2003 they said "at least
two years" which seemed incredible at the time. Many of us thought they'd just
dump Element 1 by MO&O (if that's the right acronym) in a few weeks/months.
There were even several petitions to that effect. But it's pretty clear that
FCC is going the whole NPRM route, and in no big hurry to do so.
>>
>> I hope it's true.
>
>I want the situation to stabilize. In a world where the testing
>requirements are in a state of flux - and it is a given that the testing
>regimin is likely to get easier, not more difficult - many people will
>take the path of least resistance and wait until requirements are
>dropped.

I think a few people will. Just as some people will wait until an item drops
below a certain price before they'll buy one, or replace the one they've got.

However I don't think there are large numbers of people waiting for Element 1
to go away before they get their amateur licenses.

>That is *if* they are dropped. But as I noted, there is always
>*someone* to say that the element one test is going to be eliminated
>"any day now"...

It's been a year and a half since WRC 2003 and there's no change in sight. NPRM
cycles are long enough that it's very reasonable to expect no action until
2006. So once again, ARRL news is right on the money.

Of course there are always a noisy few who will say they're going to get a ham license, but who never seem to get the proverbial round tuit. I recall one very regular poster here who told us, way back in January 2000, that he was going for Extra "right out of the box". He just didn't say *when*. Shall we continue to lower the standards of the ARS to accomodate such people? I say no.

>
> Is this appropriate?
>

I'm not a VE, so I don't know how much it actually costs to conduct a session.
But it seems to me that with the rising prices of everything, particularly
gasoline, it may be reasonable.

Consider that ~ 35 years ago, back when FCC charged for exams in the FCC
office, the fees for an amateur license test were as high as $9. How much does
$9 in 1970 equate to in 2005? I'd guess $35 to $45.

Of course the FCC examiners were paid and the VEs are volunteers. But the VE
sessions are usually much more convenient.

The folks are going to need a lot of help on this one. I hope that many commercial interests will provide transport of needed materials to the areas; I hope people will be allowed to volunteer who will not be chastised by their employers for it; I hope the world won't look upon the United States as the "savior" and forget that they, too, can help.

As to charitable organizations--best bet is probably Int'l. Red Cross. Unfortunately, they and other major organizations are probably fat at the top with loads of volunteers at the bottom--but at least they have the capability and resources to handle this. Don't forget you can contribute locally and seed the money to the Int'l. branch by specifically stating that.

Another classic "Hansism" where Hans opens his mouth and inserts
his foot. There are widely broadcasted warnings not to contribute
to many charities, because of their direct connection to Muslim
interests and their history of diverting donated money from the victims
to support the radical Muslim Jihad (that's global war on terrorism for
you Hans. We know you have trouble with big words.)

Barry, I think you're new to the group. As far as I can figure,
Lenover21 kind of speaks out against Morse qualified Hams, or at least
those who support Morse code testing every chance he gets. He has some
pretty strong feelings in that way. That is how we get Morse related
comments here in this thread. In the US of A, there is no Morse code
testing for access to Ham frequencies above 30 MHz, so this thread
doesn't have much to do with Morse code testing.

But that's Len, and we all like him anyhow (at least I do)

Certainly Lenover21 and William have said words to that effect.

> example is the exception that proves the rule.

I think Kim said it best about taking whatever you can along with you.
Here in mountianous Central PA there are places *in the middle of town*
where the signal simply goes away. If I had to stake my life on getting
through, I would use my HT in our area. And that is my point here.

> No, not me personally. I AM "offended" by the self-righteous hams
> who insist (and some demand) that the morse test MUST remain
> as if it is some kind of importance to "the service."

That isn't me though. If and when the requirement goes away, I'll go on
like before. Some Hams think *everything* is the death of Ham radio. I
think it is creeping cronyism, the ability of middle aged and up males
to become incredibly angry with small things, and to make giant leaps of

connectivity between things.

My whole point is that if you want to be a Ham with HF access at this
time, that is a hoop you have to jump through.

> This is the new

How very profound, "bb". I never engaged in sex as or with a sailor.

Perhaps you'll want to revise your minimalists posts to include complete thoughts and enough of a quote so that we'll have at least some idea of what you're talking about.

Here's a cut n' paste from the Christian Media website:

SHORT WAVE
NEW FREQ CHANGE! MON 8/2

7.385 WRMI / 4 - 9 PM Changes To 6.870!

17.495 WBCQ / 9-11 AM M-F

15.725 WRMI / 9 AM - 9 PM M-F

9.330 WBCQ / 6 - 8 PM M-F

7.490 WJIE / 24/7

All Times Pacific

http://www.christianmedianetwork.com/

Now that you've mentioned him, I haven't heard the familiar James Lloyd
psycho laugh interval signal in a while. I've assumed it was lost to bad
propagation, but I sure would like to have confirmation that he's still on
the air.

>
> I miss him and his chicken coop hens
> cackling in the background. He was a
> real hoot, almost as funny as the Profit!

That's true. But the only ones who could out run Brother Stair in the
entertainment value race are the Jerimiah 33-3 Ministries Guy and George W.
Gentry, but those guys are sprinters, not marathoners.

>
> I guess we could say that if RG Stair were
> born sometime in the 1940's and was a

I think of her as more of a conspiranoic like Alex Jones rather than an end
timer like Brother Stair. Either way, she's the go to gal for anyone who
needs to hear a Mr. Rogers like radio skit about the evil conspiracy which
wants to rule the world.

> Taxes were raised to keep the deficit from going even higher. At a time of high
> interest rates, a high deficit can cause a runaway situation because you need
> more and more money just to pay the interest on the loans.

You don't necessarily need high interest rates, Jim. They can suppress
the inflation for a little bit, but only a year or two.

I'm noticing inflation nipping at the edges of my purchases. Where I
get Breakfast at McD's they have raised the prices by 10 percent this
week. My XYL's flooring suppliers have announced a 20 percent hike

effective 1/1/2005.

People that think that we can support a virtually unlimited deficit
coupled with tax cuts *without* inflation are the same people that
thought that there was a new paradigm afoot in the stock market during
the late 90's.

If you continue to spend more than you make, you eventually go
bankrupt. It's that simple. Despite all we do, all the adjustments, all
all of it, we can not ignore a fundamental rule.

> And in 1979 we got another OPEC boycott and another doubling of gasoline
> prices.
>
> So don't blame Jimmy Carter without also blaming those who came before him.

Blaming Carter for high inflation is simply so incorrect. Here is
another case of words and actions differing. Here you have an honest and
honorable man who was president at a difficult time in American history,
when we struggled to pay back those Moonshot and War expenses, and yet
he is ridiculed as a weak and ineffective president.

So much for "Character counts" !!!

History will probably be much kinder to JC than so many of us are now.

> And the fact remains that married couples who both work pay *more* federal
> income taxes than if they weren't married. That "marriage penalty" was partly
> fixed by Carter and then unfixed by Reagan. If the Republicans are truly for
> "family values", why is the penalty still there? It amounts to serious money,
> not just a few dollars.

When actions and words differ, I rely on actions. Unfortunately, it
seems too many people rely on the words these days. Makes 'em very easy
to manipulate.

<snip>

Steve, does your mug shots include people who steal money from the
Social security program?

> And someone willing to play the game might not be that humiliated.

It won't work. In this day and age, there are people willing to
humiliate themselves to get on programs such as Jackass, The Swan,
Survivor, (pick a theme) Jerry Springer, or any of the other television
shows that allow idiots to get their visage on TV. There might be people
lined up to do this.

> I recall that in some places there were anti-prostitution efforts that focused
> on the *customers* rather than the *workers*, so to speak. Pictures and names
> in the paper and all. I dunno how well those programs fared.

This usually fails. Some of the people who frequent those prostitutes
have deeep pockets, and aren't in a position to be affected by public shame.

There was a so-called Christian group semi-locally who were taking
pictures of license plates of people parked at adult book stores (do
they actually sell any books?) That usually goes on until they get sued,
and of course invariably someone is caught that ends up being an
embarrassment to the fundies.

> This all relates to amateur radio in a very basic way:
>
> The abuses mentioned by Steve and I are all the result of a mindset that

Jim, that is a *major* stretch, almost as if I were to say that *any*
message here is on topic, as well as any reply I make because my primary
mode is PSK31, which involves typing, and all these messages are typed! 8^)

You and Steve will never change each others minds about this political
stuff. If nothing else, you two have brought out that neither party has
a lock on fiscal responsibility, ethics, honesty, big picture thinking
or any of the other qualities we (should) look for in our leaders.

Ahhhh, now I get it. Here we use "meter" as the spelling where you would
use "metres". Just like color vs. colour.

>> We lost 220-222 MHz. That isn't important unless all the 2m and 3/4m

> Do you have more repeaters than hams?

It can be a problem! In my investigations into near space ballooning, we
are pretty much prevented from using 2 meters for a band unless we go
for a simplex repeater. There are a LOT of 2 meter repeaters. Just about
everywhere we would be hitting a lot of repeaters when we keyed up from
100,000 feet. So we will probably use the 70 centimeter band for our
repeater.

I'm not sure if International Red Cross is any better than the American Red Cross or any of the other agencies I've listed, and I don't want to start a fight about it so in any case, for those who want to follow Steve's good advice, here is the contact information:

International Committee of the Red Cross
19 avenue de la Paix
CH 1202 Geneva
Switzerland
Phone ++ 41 (22) 734 60 01

What about "volunteer" doesn't the FCC understand?

And if they're worried about their gas money, I think they can claim 31 cents per mile on their federal income tax returns for travel incurred while volunteering.

You asked.

What I meant was that if interest rates are high, much of the money coming in as taxes goes right back out again to pay the interest on the debt. Those taxes don't fund any government programs at all, they simply make the loanholders richer and the taxpayers poorer.
>

Part of that is due to Florida, of all things. The destruction caused by the hurricanes has caused prices of most building materials to rise. I'm in the process of buying a new garden shed and some fencing, and the supplier has had to tack on a surcharge because of the increased prices of lumber.

> People that think that we can support a virtually unlimited deficit

Sort of. The old boom-bust cycle isn't a law of nature. But the fact that you eventually have to live within your means *is*.

> If you continue to spend more than you make, you eventually go
> bankrupt. It's that simple. Despite all we do, all the adjustments, all
> all of it, we can not ignore a fundamental rule.

It's as true as gravity.

One way that it comes out is inflation. Money becomes worth less over time, because it is being created without anything to back it. Or to put it another way, money production exceeds real production.

Oddly enough, inflation is ultimately the enemy of the rich and the would-be rich. That's because it eats up investment.

I remember a time when you could have a very nice middleclass life on $10,000/yr. Which meant that if someone could get about $200,000 in investments yielding 5%, they'd be set. Today you need five to ten times that amount for a comparable lifestyle. In many cases, people's ability to save and invest is outstripped by inflation.

So they get into the mindset of borrow, enjoy and spend *now*, rather than save for later.

Absolutely true. Don't forget the "Great Society" funding, too.
>
> So much for "Character counts" !!!
>
> History will probably be much kinder to JC than so many of us are now.

Consider the Middle East. Carter was able to get Israel and Egypt to sign the Camp David accords, which have held for more than a quarter century. An agreement between longtime enemies in a part of the world where an agreement that lasts a week is a big deal. And even though the agreement cost the Egyptian president his life, and cost Israel a lot of territory, it has held up. Nobody before or since was able to get a Middle East agreement like that.

But Carter is remembered by many for the Shah of Iran fiasco rather than for the Camp David accords. btw, the main reason Carter allowed the Shah to enter the USA (which event so angered the Iranians that they took over the embassy in Tehran) was that Henry Kissinger advised him to do it.

Agreed! But in some ways it's even simpler than that.

Consider the presidential elections since 1979...

In each case, did the candidate who demonstrated the most intelligence
win?

I say no - not in *any* case.

Tsk. Poor frustrated Avenging Angle.

I was transmitting RF on HF, VHF, UHF, and microwaves in the 1950s. Again in the 1960s, then in the 1970s (including LF and VLF), and in the 1980s and 1990s. Earlier this year (which includes the 2000s) I was talking on HF from a sailboat.

I've done it in the military, in civilian life, for the U.S. government and for private business (a little of which includes my partner-ship in a private business), and with local utilities...not to mention on land, in the air, and on water.

> Not a single second of "operating" time...Just another Uncle Sam Green
>radio mechanic.

"Logs" are only required by lumber companies.

The only non-amateur "logging" required is in radio broadcasting (which
I've been doing for WREX-TV, WMCW, WRRR) and (formerly) for
certain communications conducted by corporations (RCA EAS Division).
Those have been duly noted on the back of my First Class Radio-
Telephone (Commercial) Radio Operator License and signed off by
the Chief Engineers or responsible Staff Engineer...and witnessed by
an FCC Field Office when the License was up for renewal.

>> But, in 2004, U.S. radio amateurs MUST still pass a morse test

> Because Amateur Radio is NOT Military, Commercial, Maritime, Public
>Service or Broadcast. It's Amateur Radio. It's Basis and Purpose are
>completely different than any otehr radio service.

Finally the Avenging Angle has had a glimpse of reality!

[I've never been engaged in an "otehr" radio service, can't find it
in Title 47 C.F.R.]

Amateur radio is basically a HOBBY activity, engaged in for
personal pleasure and not for pecuniary compensation. As such it
is NOT any sort of "life saving" or "emergency" radio service.
It, like most any other human activity, CAN be used in emergencies
but the Basis and Purpose as outlined in Part 97.1 Definitions
does NOT establish itself as either an "emergency service" nor as
some kind of vital radio communications activity needed by the
nation. Really.

>>>Does my posting offend?
>>
>> No, not me personally.

>
> Angry, angry, angry little man.

Nope. You are lost in your own imagings again.

>Amounted to nothing important in
>life...is nearing the end of his and regrets having not been celebrated as
>the Radio Hero he perceives himself to be.

Tsk. More imaginings again.

"Radio Hero?!?" Never implied that. :-)

I'm just another human male who has accumulated a fairly large
experience in radio-electronics, spending an entire working career
in the electronics industry as well as enjoying a hobby of
electronics for a period longer than having to work at it for a living.
An ordinary human male lucky enough to be married to my
high school sweetheart and with a comfortable (though not great)
income, no longer having to get up and go to work 6 days a week
for any of that. No mortgage, no outstanding liens on property.

>> If that morse test is so absolutely "needed," then the definition of the
>> ARS should be changed in Part 97 to "Archaic Radiotelegraphy
>> Service" for the USA.
>
> The only thing "archaic" here, Lennie, is YOU and your petty, whining,
>demaning rants.

Tsk, tsk. Wipe your chin. The froth is running down it...

> You were a whining little putz all your life. You're a whining little
>putz now. And when you're FINALLY dead and gone, you'll not be long
>remembered because you were a whining little putz.

Now now, don't try any of that "USMC Charm School" dill instructor
stuff. :-) This is reality, not some boot camp for recruits. Try to
understand that.

Correspondents in this newsgroup have differing opinions. Like it or not, opinions (even your own) are just opinions, not Absolute Truth. That you don't like any opinions that disagree with yours is a very demonstrated fact in here...but that doesn't mean you can always conduct yourself as some kind of Keeper of the Covenant with an imaginary amateur god. Talking nasty (using words of Yiddish, not your language goyim) is not socially respectable.

The subject of this thread is the morse code test presently required for any amateur radio license class having below-30-MHz privileges. The retention or elimination of the morse code test will NOT affect any of the operating privileges of current licensees. It may affect the egos of those olde-tyme hammes but that is their problem. The morse code test existance IS an archaic regulation which has turned away many hobbyists in the past. There is NO viable "need" to keep that morse code test in the regulations. That is reality.

So...is there some secret U.S. amateur regulation restructuring
that has already removed the morse code test?!? [other than a
specific, individual medical waiver of it, possible years ago]

My commercial license let me transmit RF on a far wider range
of the EM spectrum than just the amateur bands, certainly those
few spectrum slices allocated on a primary basis to just amateurs.

Didn't even need any "license" to transmit on HF, on VHF, on UHF
and on microwaves 51+ years ago when in military service.

An amateur radio operator license is NOT a noble title indicating
a licensee is "superior" to all other human beings...except in the
personal imaginings of a few who are lost in a fantasyland.

<a lot of guru-type expostulation and exhortation on economics and socio-political behavior omitted...>

>This all relates to amateur radio in a very basic way:

Unfortunately, it does NOT. All it points out is that you are using this newsgroup as a general chat room to talk about ANY subject instead of focussing on amateur radio policy.

>The abuses mentioned by Steve and I are all the result of a mindset that >focuses on "rights" to the exclusion of *responsibilites*. Many of us see >proposed reductions in the standards of the ARS as a form of that mindset.

Many of "you" want to enforce your personal desires on everyone else and think "you" are some kind of Keepers of a Covenant (of some imagined god-inspired "service"). All because you met some test requirements long ago, established by other Keepers of an even older Covenant and are firm Believers in the Church of St. Hiram.

As usual, you olde-tymers are caught in the territorial imperative emotionalism of a personal activity and want to enforce your personal mindsets on all others. Not a good thing since the FCC is not chartered by law to be a reflection on "your" personal desires nor in the maintenance of a living museum of amateur radio antiquity.

Insofar as radio regulations go, the "ARS" does not stand for Archaic Radiotelegrphy Service. Removal of the morse test does NOT "dumb anything down" but rather makes the amateur hobby more open, freeing it from all the tight confines of an imagined "amateur profession" with all the rigid, inflexible standards and practices that date back to seven decades ago.

"You" don't own anything but your own radio equipment in amateur radio. "You" do not have any "power" to prevent non-amateurs from communicating with their government on federal laws and regulations. "You" olde-tymers have no claim over others on "rights" or anything else. Try to conduct yourself appropriately when faced with reality.

>Who said that?
>
>What *has* happened is that cell phones do much if not most of the 911-type
>reporting that we hams used to do.

Really? "Hams used to do the 911 communications?"

I don't think so. That's a fantasy brag far above the membership agitprop of the ARRL.

Hams did SOME emergency calling in the distant past, but it was rather minor even in the past half century compared to all the other forms of communications available to citizens.

>Particularly in metro areas.

Really? I live in a "metro area." Greater Los Angeles (counting the 82 other communities besides L.A. city) has a population of 10 million. There has been NO dependence on amateur radio for any emergency communications for decades, not prime, not secondary, not even tertiary level in decades...and that includes the huge harbor facilities of San Pedro - Long Beach and all the marinas up and down the immediate coast. USCG depends on the VHF radios of the maritime life here for life-saving efforts just as they do in other coastal and inland waterways.

>The above example is the exception that proves the rule.

Nothing is "proved" other than resourcefulness of human beings faced with any sort of emergency.

About three years ago a teenage girl heard a call for help on her FRS handie-talkie, an action acted upon that resulted in a half dozen mountain climbers being rescued quickly in the state of Washington. That was in the state newspapers with some exposure on the national press.

By your "exception logic," FRS radios are "vital to emergency communications." Tsk, and FRS isn't licensed radio, either!

You should really confine your fantasyland imaginings to your lulls between "Type 7" radio contacts...and remember that amateur radio is basically a HOBBY activity done for fun, not some heroic life-saving "service" to the nation.

Status quo MUST be held as long as possible...? :-)

Why?

>However I don't think there are large numbers of people waiting for Element 1
>to go away before they get their amateur licenses.

The only ones who've claimed "large numbers" is the ARRL in
their regular propaganda "news." :-)

Actually, in the hobby activities in the USA, amateur radio is NOT
very high on the list. That's reality, despite all the self-interest of
the very ardent ham fanatics.

>>That is *if* they are dropped. But as I noted, there is always
>>*someone* to say that the element one test is going to be eliminated
>>"any day now"...
>
>It's been a year and a half since WRC 2003 and there's no change in sight.
>NPRM
>cycles are long enough that it's very reasonable to expect no action until
>2006. So once again, ARRL news is right on the money.

If the ARRL says it, it MUST be true. :-)

Belief system is working well, we see...

>Of course there are always a noisy few who will say they're going to get a
>ham
>license, but who never seem to get the proverbial round tuit. I recall one
>very
>regular poster here who told us, way back in January 2000, that he was going
>for Extra "right out of the box". He just didn't say *when*. Shall we
>continue
>to lower the standards of the ARS to accomodate such people? I say no.

Of course not...morsemanship is the very HIGHEST attainable
goal in radio amateurism. All MUST aspire to be the best "radio
operator" circa 1930s era if they are amateurs. And with very
rigid, inflexible rules of behavior as if the hobby were a sort of
profession where all rules MUST be followed.

Removing the morse test is a 1930-standards "dumbing down."
Can't have that! Time is held in stasis in amateurism and all must
remain as it was when all the superextras took Their tests. It
has no validity in this new millennium.

After all, when the morse test is eliminated, all those superextras
won't have much to brag about, will they? :-)

Even an "F" student gets a few answers right.

How many versions of the tests did the FCC have at
any one time? The rules used to say "No retests
within 30 days" so that would mean that they changed
the versions every 30 days. Now, if they only had
two versions, one could wait 60 days and see the
exact same test they had before. I don't suppose
the examiners had kept track to see if anyone actually
did that. Or more likely they didn't worry about it.

Well Barry I guess I should come clean on this one ..... to tell you the truth I haven't had to was my car for the last 10 years. Every Thursday there are about 2 dozen guys that come over and cut my grass and was the windows. Also on alternate Tuesdays their wifes cook me dinner. Now this is ONLY for a no code pass. I have been personally treated to ski weekends, broadway shows and comps at Atlantic City among other things for Gerneal passes. Now for the EXTRA ....I used to get free airfare and rooms in Europe when the code speed was 20 WPM but alas now with 5 WPM I can only manage the Vegas - westcoast vacations. However I do have a Lincoln Town Car a DX fanatic bought for me. Barry you ought to get into this mode ... a guy can make a good living at it.

Hello, Phil and Barry

As a kind hearted soul who is willing to assist some folks having communications difficulties, I have asked a friend of mine in the U.K. for some assistance.

Here is his reply:
********* start of copied message**********
Hi James and All,

I will willingly help you with your project Jim, just send me what you want to say in your words and I will convert it to an English style of your choosing.

I can do you, the Queens English, London Cockney, London North, London South, not that I have ever been south of the river, Middle England, West Country or Welsh (real Welsh mind, not Canadian Welsh), LOL.
********* end copy*********

So, if Barry would be so kind to inform us as to what kind of colour should be applied to our conversation, I shall ask my friend, Bernie, in the U.K. to translate for us.

With all due regards from Rochester, NY
Jim AA2QA

> In the Garden of Eden.

Really?

In these parts, "date" used to mean "go out with, having a certain ulterior romantic motive as the hoped-for outcome". It did not mean any sort of committed relationship, nor necessarily anything happening in the Studebaker.

But somewhere in there the meaning got changed.....

--

Of course that may be a local thing. There are many local Phillyisms and even Delco (Delaware County) isms not well known outside this area.

For example, there's "skootch" which can be both a verb and a noun. Also "smack", (as in "don't be a smack"). It refers not to an illegal drug but to an annoying and immature person.

"Prune" means a date without the ulterior motive. Platonic, IOW.

"Downashore" refers to the Southern New Jersey coastal area.

Then there are "shoebies" and "two streeters". And of course sending people to 14th Street.

73 de Jim, N2EY
"YO ADRIENNE!"

(Adrian is a male name, Adrienne is female).

Were they candidates? (I guess they thought they were!)

I don't think Hillary was the smarter one. See below.

Of course you know the joke that ends with Hillary asking "why are you sitting in my chair?"

--

This part's for Steve:

While we may suspect that the less-intelligent candidate has won in every presidential election since 1979, Bill Clinton managed to *prove* it for us in his case. Even after other presidential hopefuls like Gary Hart had their careers ruined by fooling around on the job, ol' Slick Willy (SW) thought he could do it and get away with it. As if Watergate, Wilbur Mills, Fannie Fox and all the other examples had never happened, and he'd never get caught.

The funny thing is that even after the Gennifer Flowers incident, Hillary *believed* him. Now she may have gone to good schools and had a law career and all that, but if she can't tell that SW was playing the same hootchy-kootchy game again, she sure ain't the brightest bulb in the box.

You watch - Hillary will try for the presidency in 2008, and unless she's stopped early on, will ruin any chances for the Dems.

Great going, "bb". Your few words, posted to r.r.a.p., had no intended recipient mentioned. It'd be hard to live vicariously or otherwise through your posts. You simply don't provide enough information, though of late you've been throwing in plenty of """.

>Round and round....

Getting dizzy yet?

I have always believed that if I am to be the kind of Nurse that I want to
be, I must advocate for the patient, but I must also educate the patient as to
what is in their best interests (realizing, of course, that you can't make that
horse drink...) even when I am telling them something they may not want to
hear.

I am absolutely amazed at the numbers of people (even many "educated"
people) who will look you in the eye as you're trying to give them the
information they need to make the best decision, yet will start if off with
somethig like "Yeah, well, My Aunt Jenny said...". Of course Aunt Jenny's NOT
a health care person, but since what Aunt Jenny said IS what they want to hear,
the effort was just wasted...Of course Mr Nephew or Ms Neice will be back in
the ER in short order wondering why they aren't feeling any better.

>> Inappropriate ER usage dropped by 53% and collections improved by a
>>quantum leap because we weren't wasting time on what were charity cases. No

The 17.5% was a maximum for certain ranks, not an overall raise. BTW, you are a recipient of that raise.

It just might have been the 1st Peace Dividend; the US Government making peace with the anti-war, anti-draft protesters (J.F. Kerry) by withdrawing from Vietnam, ending the draft, and invoking a RIF.

Hello, Len

Wait for a patch? If you mean I have to hit 4 buttons on my HT to bring up the dial tone, then I guess I wait a few seconds for a patch :))

Seriously, when I was on Guam, a phone call to the states was $12.00 (in 1968) for the first 3 minutes and 4 bucks a minute thereafter. The hamshack worked just fine.

As you point out, the cellphones have replaced ham radio.

What did that sergent run up on his cell phone calling back home from Iraq? Was it $1,700 or $17,000? But, of course, this is very good as it is making a lot of money for the "right" folks LOL.

I believe there is a repeater in Iraq and can and has been used, but I'm not too sure about 3rd party agreements and stuff and absolutely don't want to run afoul of certain government agencies (of which the FCC wouldn't even make a blip on my list of which agencies and how much concern LOL).

I guess what sometimes is disappointing is the extreme views - either that amateur radio is the answer to everything and that amateur radio is the

answer to nothing and is antiquated. Neither view is correct, in my humble opinion.

Meanwhile, I'm getting ready for New Year's eve. Nope, not going anywhere. Too many drunks will be on the road.

Have a safe and happy New Year!

>the versions every 30 days.

Not so. There were 4 or 5 different versions of the same element, randomly given out so the person next to you would usually have a different version from the one that you had (most serious multiple-guess tests work that way too).

Thirty days was enough of a break in time that examinees who didn't know their stuff cold would forget what the questions and suggested answers were, and the exam rooms were not overloaded with applicants (except for Friday after Thanksgiving and during spring and winter breaks when the place resembled the Istanbul Bazzar...)

This of course was before Dick Bash. (ooo, did I open the can of worms again ??)

>I don't suppose
>the examiners had kept track to see if anyone actually
>did that. Or more likely they didn't worry about it.

All the examiners whom have known over the years were pretty laid back except for catching overt cheating. The engineers (supervisors) would also randomly stroll up and down the aisles usually to see what the latest "exam aids" were. <ggg>

WRONG: Volunteer (charitable) work only gets 14 cents per mile.

You couldn't even get that correct.

Which, assuming you're in a 28% tax bracket, only works out to a tax savings of
$.04 per mile. You better have a damned economical car or you're losing money
on that deal!

Since you opened the door, let's do some further comparisons of the ARS to other services:

* We purposely operate using as little power as possible (QRP), they don't
* We have antenna measuring contests with home-built antennas, they don't
* We conduct emergency comms when other services are down, they're down
* We don't have to operate on pre-assigned frequencies, they do
* We have on-the-air contests (lots of them), they can't
* We can vary our power from 0 to 2KW, they can't
* We exchange post cards after a QSO, they don't
* We're frequency-agile with a VFO, they aren't
* We have swapmeets ("ham fests"), they don't
* We can build our own equipment, they can't
* We operate for the fun of it, they don't
* We have radio club meetings, they don't
* We can ragchew for hours, they can't
* We can operate at will, they can't
* We go on DXpeditions, they don't
* We're licensed, you're not

No 73 for you, Jeff KH6O

>
> As usual, we are treated to yet another round of "Back in the
>Fifites..."

Tsk. Poor frustrated Avenging Angle.

I was transmitting RF on HF, VHF, UHF, and microwaves in the 1950s. Again in the 1960s, then in the 1970s (including LF and VLF), and in the 1980s and 1990s. Earlier this year (which includes the 2000s) I was talking on HF from a sailboat.

I've done it in the military, in civilian life, for the U.S. government and for private business (a little of which includes my partner-ship in a private business), and with local utilities...not to mention on land, in the air, and on water.

> Not a single second of "operating" time...Just another Uncle Sam Green
>radio mechanic.

"Logs" are only required by lumber companies.

The only non-amateur "logging" required is in radio broadcasting (which
I've been doing for WREX-TV, WMCW, WRRR) and (formerly) for
certain communications conducted by corporations (RCA EAS Division).
Those have been duly noted on the back of my First Class Radio-
Telephone (Commercial) Radio Operator License and signed off by
the Chief Engineers or responsible Staff Engineer...and witnessed by
an FCC Field Office when the License was up for renewal.

>> But, in 2004, U.S. radio amateurs MUST still pass a morse test

>
> Because Amateur Radio is NOT Military, Commercial, Maritime, Public
>Service or Broadcast. It's Amateur Radio. It's Basis and Purpose are
>completely different than any otehr radio service.

Finally the Avenging Angle has had a glimpse of reality!

[I've never been engaged in an "otehr" radio service, can't find it
in Title 47 C.F.R.]

Amateur radio is basically a HOBBY activity, engaged in for
personal pleasure and not for pecuniary compensation. As such it
is NOT any sort of "life saving" or "emergency" radio service.
It, like most any other human activity, CAN be used in emergencies
but the Basis and Purpose as outlined in Part 97.1 Definitions
does NOT establish itself as either an "emergency service" nor as
some kind of vital radio communications activity needed by the
nation. Really.

>>>Does my posting offend?
>>
>> No, not me personally.
>

>
> ANYthing from a Radio Amateur offends The Licenseless One. He can't
>stand being bested by anyone, ESPECIALLY "amateurs".

Tsk. A most angry (almost raging) Avenging Angle is frothing at
the mouth again, trying (but not succeding) in putting his imaginings
into a reality that won't accept such fantasy.

>> I AM "offended" by the self-righteous hams
>> who insist (and some demand) that the morse test MUST remain
>> as if it is some kind of importance to "the service." This is the new
>> millennium, not some olde-tyme raddio where the "operators" sit

>
> Ahhhhhh....but we ARE "Very Important". You just wish it were otherwise.

Sorry. Your "importance" is solely inside your own ego.

>Then you could sleep at night knowing that we'd been knocked down to your
>level!

Except for last night with its lightning and thunder rattling windows, I
sleep quite well. [southern California was undergoing a rainstorm,
complete with rare lightning discharges]

Tsk. You place yourself on an imaginary pedestal and proceed to
knock yourself down with extremely one-sided imaginary thoughts
plus a great deal of personal insults tossed at all those who do not
believe as you do.

>> Amateur radio is a HOBBY activity. Always was, and probably always
>> will be since the rest of the world can jolly well get on with life
without
>> all those amateur hobbyists to Save The Planet from whatever.
>
> Angry, angry, angry little man.

Nope. You are lost in your own imagings again.

>Amounted to nothing important in
>life...is nearing the end of his and regrets having not been celebrated as
>the Radio Hero he perceives himself to be.

Tsk. More imaginings again.

"Radio Hero?!?" Never implied that. :-)

I'm just another human male who has accumulated a fairly large
experience in radio-electronics, spending an entire working career
in the electronics industry as well as enjoying a hobby of
electronics for a period longer than having to work at it for a living.
An ordinary human male lucky enough to be married to my
high school sweetheart and with a comfortable (though not great)
income, no longer having to get up and go to work 6 days a week
for any of that. No mortgage, no outstanding liens on property.

>> If that morse test is so absolutely "needed," then the definition of the
>> ARS should be changed in Part 97 to "Archaic Radiotelegraphy
>> Service" for the USA.
>
> The only thing "archaic" here, Lennie, is YOU and your petty, whining,
>demaning rants.

Tsk, tsk. Wipe your chin. The froth is running down it...

> You were a whining little putz all your life. You're a whining little
>putz now. And when you're FINALLY dead and gone, you'll not be long
>remembered because you were a whining little putz.

Now now, don't try any of that "USMC Charm School" dill instructor
stuff. :-) This is reality, not some boot camp for recruits. Try to
understand that.

Correspondents in this newsgroup have differing opinions. Like it or not, opinions (even your own) are just opinions, not Absolute Truth. That you don't like any opinions that disagree with yours is a very demonstrated fact in here...but that doesn't mean you can always conduct yourself as some kind of Keeper of the Covenant with an imaginary amateur god. Talking nasty (using words of Yiddish, not your language goyim) is not socially respectable.

The subject of this thread is the morse code test presently required for any amateur radio license class having below-30-MHz privileges. The retention or elimination of the morse code test will NOT affect any of the operating privileges of current licensees. It may affect the egos of those olde-tyme hammes but that is their problem. The morse code test existance IS an archaic regulation which has turned away many hobbyists in the past. There is NO viable "need" to keep that morse code test in the regulations. That is reality.

So...is there some secret U.S. amateur regulation restructuring
that has already removed the morse code test?!? [other than a
specific, individual medical waiver of it, possible years ago]

My commercial license let me transmit RF on a far wider range
of the EM spectrum than just the amateur bands, certainly those
few spectrum slices allocated on a primary basis to just amateurs.

Didn't even need any "license" to transmit on HF, on VHF, on UHF
and on microwaves 51+ years ago when in military service.

An amateur radio operator license is NOT a noble title indicating
a licensee is "superior" to all other human beings...except in the
personal imaginings of a few who are lost in a fantasyland.

>
>Who said that?
>
>What *has* happened is that cell phones do much if not most of the 911-type
>reporting that we hams used to do.

Really? "Hams used to do the 911 communications?"

I don't think so. That's a fantasy brag far above the membership agitprop of the ARRL.

Hams did SOME emergency calling in the distant past, but it was rather minor even in the past half century compared to all the other forms of communications available to citizens.

>Particularly in metro areas.

Really? I live in a "metro area." Greater Los Angeles (counting the 82 other communities besides L.A. city) has a population of 10 million. There has been NO dependence on amateur radio for any emergency communications for decades, not prime, not secondary, not even tertiary level in decades...and that includes the huge harbor facilities of San Pedro - Long Beach and all the marinas up and down the immediate coast. USCG depends on the VHF radios of the maritime life here for life-saving efforts just as they do in other coastal and inland waterways.

>The above example is the exception that proves the rule.

Nothing is "proved" other than resourcefulness of human beings faced with any sort of emergency.

About three years ago a teenage girl heard a call for help on her FRS handie-talkie, an action acted upon that resulted in a half dozen mountain climbers being rescued quickly in the state of Washington. That was in the state newspapers with some exposure on the national press.

By your "exception logic," FRS radios are "vital to emergency communications." Tsk, and FRS isn't licensed radio, either!

You should really confine your fantasyland imaginings to your lulls between "Type 7" radio contacts...and remember that amateur radio is basically a HOBBY activity done for fun, not some heroic life-saving "service" to the nation.

<all that learned talk of economics, socio-political whatsit out...>

>This all relates to amateur radio in a very basic way:

Unfortunately, it does NOT. All it points out is that you are using this newsgroup as a general chat room to talk about ANY subject instead of focussing on amateur radio policy.

>The abuses mentioned by Steve and I are all the result of a mindset that >focuses on "rights" to the exclusion of *responsibilites*. Many of us see >proposed reductions in the standards of the ARS as a form of that mindset.

Many of "you" want to enforce your personal desires on everyone else and think "you" are some kind of Keepers of a Covenant (of some imagined god-inspired "service"). All because you met some test requirements long ago, established by other Keepers of an even older Covenant and are firm Believers in the Church of St. Hiram.

As usual, you olde-tymers are caught in the territorial imperative emotionalism of a personal activity and want to enforce your personal mindsets on all others. Not a good thing since the FCC is not chartered by law to be a reflection on "your" personal desires nor in the maintenance of a living museum of amateur radio antiquity.

Insofar as radio regulations go, the "ARS" does not stand for Archaic Radiotelegrphy Service. Removal of the morse test does NOT "dumb anything down" but rather makes the amateur hobby more open, freeing it from all the tight confines of an imagined "amateur profession" with all the rigid, inflexible standards and practices that date back to seven decades ago.

"You" don't own anything but your own radio equipment in amateur radio. "You" do not have any "power" to prevent non-amateurs from communicating with their government on federal laws and regulations. "You" olde-tymers have no claim over others on "rights" or anything else. Try to conduct yourself appropriately when faced with reality.

Status quo MUST be held as long as possible...? :-)

Why?

>However I don't think there are large numbers of people waiting for Element 1
>to go away before they get their amateur licenses.

The only ones who've claimed "large numbers" is the ARRL in
their regular propaganda "news." :-)

Actually, in the hobby activities in the USA, amateur radio is NOT
very high on the list. That's reality, despite all the self-interest of
the very ardent ham fanatics.

>>That is *if* they are dropped. But as I noted, there is always
>>*someone* to say that the element one test is going to be eliminated
>>"any day now"...
>
>It's been a year and a half since WRC 2003 and there's no change in sight.
>NPRM

>2006. So once again, ARRL news is right on the money.

If the ARRL says it, it MUST be true. :-)

Belief system is working well, we see...

>Of course there are always a noisy few who will say they're going to get a
>ham
>license, but who never seem to get the proverbial round tuit. I recall one
>very
>regular poster here who told us, way back in January 2000, that he was going
>for Extra "right out of the box". He just didn't say *when*. Shall we
>continue
>to lower the standards of the ARS to accomodate such people? I say no.

Of course not...morsemanship is the very HIGHEST attainable
goal in radio amateurism. All MUST aspire to be the best "radio
operator" circa 1930s era if they are amateurs. And with very
rigid, inflexible rules of behavior as if the hobby were a sort of
profession where all rules MUST be followed.

Removing the morse test is a 1930-standards "dumbing down."
Can't have that! Time is held in stasis in amateurism and all must
remain as it was when all the superextras took Their tests. It
has no validity in this new millennium.

After all, when the morse test is eliminated, all those superextras
won't have much to brag about, will they? :-)

Seems Time Magazine has a beef with Amateur Radio. This week's issue (December 27) has an article on "blogs" on page 109. In the article the following sentence will surely grab the attention of Ham Radio operators and stamp collectors - "Before this year, blogs were a curiosity, a cult phenomenon, a faintly embarrassing hobby on the order of HAM RADIO and stamp collecting." Letters to the editor can be sent to letters@time.com.

Let 'em have it, Folks!

Steve Robeson K4YZ wrote:

> Let 'em have it, Folks!

My response:

Sir,

Page 109 of the December 27th issue of "TIME" made the statement that "blogs" "...were a faintly embarrassing hobby on the order of Ham Radio and stamp collecting".

As you read this, Amateur (Ham) Radio operators are providing critical disaster relief communications in the Indian Ocean in the wake of the disasterous tsunami waves that wiped out tens-of-thousands of lives.

Amateur Radio remains one of this nation's critical disaster relief assets. It is a critical tool for FEMA, The Red Cross, The Salvation Army, and countless state and local governments. Amateur Radio operators put in thousands of manhours in the wake of the Septermber 11th attacks, helping to fill in crucial communications gaps in New York City.

Amateur Radio has been lauded in the Federal Register on numerous occassions for contributions to the Department of State as it has often been the only link between disaster-struck outposts and the United States.

The Armed Forces, under the auspcies of the Military Affiliate Radio System, employs thousands of Amateur Radio volunteers to provide domestic and deployed health and welfare resources for our military personnel.

The United States Coast Guard routinely depends on Amateurs to provide crucial links between Search And Rescue facilities and ships in distress on the high seas.

Amateur Radio even plays a part in the space program as it is an intergral part of the International Space Station. Thousands of students around the world have been able to communicate with the crews of the ISS through a program called ARISS: Amateur Radio on the International Space Station.

And, oh yes..we manage to have fun along the way!

An immediate apology is not only due, it's expected.

Respectfully yours,

Steven J Robeson, LPN

money
on that deal!
"""

Now that's the spirit of Volunteerism! Maybe the FCC will let the
American Red Cross handle amateur testing. They allow more on mileage.
Hi!

We need to get the government back into governing/regulating and out of
charity work. They suck at it.

And that's a plain, simple fact. Doesn't mean ham radio plays no role at all,
just that in many places and situations, a cell phone will make a 911 call that
used to be made by a ham with a handheld.

> I think Kim said it best about taking whatever you can along with you.

Of course!

But how many operational radios does Kim have in her car?

>Here in mountianous Central PA there are places *in the middle of town*
>where the signal simply goes away. If I had to stake my life on getting
>through, I would use my HT in our area. And that is my point here.

Agreed! But a lot of that isn't about the mountains - it's about the customer density and how fast they are building up the cell networks.

Remember when the shuttle burned up on reentry, and volunteers went out in search of shuttle pieces? Turned out that ham radio was better suited to the search parties' comm needs than cell phones were.

Misquote, Len. Jim wrote "reporting". In that he is correct. Since so
many (most?) people have a cell phone, it stands to reason that the
initial report is more likely to be made by a person using a cell phone.

> I don't think so. That's a fantasy brag far above the membership
> agitprop of the ARRL.

'Cept it was a misquote.

If I want to dial 911 on my HT, I simply hit the 9 button followed by
the two 1 buttons. Puts me right in. Only modification is that I have to
identify myself as using the phone patch, elsewise the 911 operator
thinks I'm calling from the repeater site! 8^)

It's roughly comparable to other hobby activities like
amateur astronomy, model railroading, model airplanes, and such.
Model railroaders and amateur astronomers, as well as
ham, are concerned about low numbers of younger people
getting into their activities. And these other activities
don't need a license.

Most of the rules are sensible enough. Even that one about
"no pecuniary interest". That rule exists to protect our
ham bands from being taken over by business people who
happen to have amateur licenses. We don't want taxi companies
clogging 2 meters.

Some rules are a bit strange in the sense that it doesn't
take more skill to operate on 14.165 SSB than at 14.323 SSb.
The FCC did it because it's very easy to determine your
carrier frequency from a remote location. It's a lot
harder for them to figure out how much power you are
running unless they pay you a visit.

Emergency comms is listed as one of several reasons the FCC
does ham radio licenses and allocates the bandwidth for us.
No all hams will have working equipment in a regional
disaster, but some will. And ham radio doesn't require
infrastructure (like cell phones do) to work. Power?
A car that survived will provide 12V power, which most
rigs are designed to run off of. And you also need hams
outside the disaster area to talk to.

Mel, don't compare the ARS with those federal criminals who call them-
selves "freebanders." Those lawbreakers don't even give a second thought
to operating on the HF aeronautical frequencies, intentionally
interfering with transoceanic aircraft comms.

Certainly you don't condone such actions, right?

No 73 for you, either.

Dear Time Magazine:

Re: Page 109 of the December 27th issue of "TIME" made the statement that "blogs" "...were a faintly embarrassing hobby on the order of Ham Radio and stamp collecting."

The shallow person who wrote that should learn something about the subjects they are writing about. I would suggest that whoever was responsible for that statement should be given a research-surfing assignment to find out what "Ham Radio" is all about before they spout off.

I am always dishartened by the likes of statements found in the Times
article regarding an individuals hobby and/or interests. Sadly, too many
folks subscribe to a common thought process that unless it is golf, tennis
or some other main-stream thing pursued by many, then folks
that do things like amateur radio, stamp collecting, antique car
restoration,
model railroading, etc.are viewed as kooks.

I don't push my interests on anyone, but I do get steamed when folks
denigrate interests they don't share.

Cheers,
Bill K2UNK

I thought that party had the market on morals cornered. Morally, you do what is right, even if it is political suicide.

And frankly, I don't think raising taxes is always going to do you in. At the federal level, perhaps taxes have been cut for some, but my state and local taxes have risen to where I am paying much more than before. Ever have your mortgage escrow deduction go up several times in one year?

Well, we were fighting things and going places when we were building our manufacturing capabilities, so while I believe those examples you cited were a drain of money, I do not believe that the money saved would have gone into manufacturing infrastructure. It certainly would not have in this day and age.

Investors (in the broad sense) today do not have much of a sense of anything beyond the next quarter. They do not care if closing a plant down here and moving it offshore has a bad effect on the nation, as they can make more money.

Ask one about the idea of building new factories and hiring American workers and making less money than if they were to do it the other way. You'll be laughed at.

It is only the money.

And before people say "Well DUH!" and think I'm an idiot, lets look at what elimination of our infrastructure will do to us.

Unless there are not going to be any more wars, there will come a time when we will *need* that infrastructure and need it badly. At that point, our only chance will be to try to build a new infrastructure and build it damm quickly. Think about what will happen if most of our imports are shut off.

At least some investors were able to make some extra profit.

I still say that investors need to show a little morality too.

No doubt lumber is involved, but she deals in carpeting, tile and concrete board mostly. This is no surcharge, it is permanent price increase

It's gross national product. Any country has only so much. If they
print so much money that there is more money than GNP, then the money
automatically adjusts to the GNP. Sounds oversimplified, but it works.

And deficit spending is just that. We've avoided runaway inflation so
far, but as I noted, it has begun.

> Oddly enough, inflation is ultimately the enemy of the rich and the

I think that the way people get into these hobbies is changing. Whereas so many Hams I know now have been hams for about a gazillion years, I may be part of the new paradigm. I got my first license when I was 45 years old. I got into amateur astronomy when I was 40. Amateur radio takes some more outlay to get into than it used to (yeah, I suppose a young technician could lay out 75 bucks for a really cheap HT, but getting on a repeater isn't my idea of a really fun hobby. GEtting on HF is. And Astronomy has a double whammy in that most young people can't do much observing in their back yards with the terrible state of light pollution. Most of the time, I pack up my scope and drive to one of three spots. The closest is an hour away, and the other two are 2 and 3.5 hours away respectively. Not many young'uns will be able to do that kind of thing.

So I think Ham radio is simply changing its face more than going away.

Hello, Bill

You must remember that golf is important. It is popular with the upper
echelons of corporations. It is there you learn to shave strokes off you
score. These lessons can be applied in corporate America. Corporations
such as Enron and others ;)

Best regards from Rochester, NY
Jim

Hello, Len

That commercial license wasn't a particularly big deal, except that you were expected to memorize the "band plan", as it were, for VHF television. I had to laugh, no problem with the video or audio carrier nor the allotted 6 MHz per channel space. First question, I think, was "what is the frequency of the video carrier of channel 6 television in the United States?". Well, I guessed they couldn't all be that bad, so I flipped a couple of pages, put my finger down, and examined the question by my finger. "What is the color burst frequency?". Ah, simple. 3.58 MHz .... oops, all of the 4 answers started with 3.579 .....

So, I had to take it a second time and this time I simply memorized the splits and took a good hard look at how tightly various frequencies were specified. Then it was easy.

The second class ticket was a joke. 45 ohms resistance with 45 ohms inductive reactance. What is the phase angle?
a) voltage leads current by 90 degrees
b) current leads voltage by 90 degrees
c) voltage leads current by 45 degrees
d) current leads voltage by 45 degrees

Not exactly IEEE stuff.

The commercial telegraph license and radar endorsement were also not very difficult. Such brain-strainers as "why do you avoid long horizontal sections of waveguide".

A commercial license is not a noble title indicating a licensee is "superior" to all other human beings (amateurs included) LOL

Best regards from Rochester, NY

NTSC color subcarrier is exactly 3.579545454545454545454545....
MHz. :-)

Frankly speaking, I don't give a damn about that FCC field office test
I took in Chicago in March, 1956. It DID allow me to work at some
broadcast stations and earn a bit of money. I don't remember that
four-part test for a 1st 'Phone as being exclusively about broadcasting.
Maybe it changed later. Irrelevant.

A whole lot of changes have taken place in radio and electronics in
the last almost 49 years.

>So, I had to take it a second time and this time I simply memorized the
>splits and took a good hard look at how tightly various frequencies were
>specified. Then it was easy.

I took mine just once. Everything. My "Q&A" book was a borrowed
Regulations set then printed up in loose-leaf form. All I did was
memorize what seemed to be important regulations. The theory I'd
already learned from the military experience, high-power HF trans-
mitters plus VHF, UHF, microwave radio relay. No real problem.

>Not exactly IEEE stuff.

It was never intended to be such...any more than the amateur
written test is some kind of academic accomplishment.

>The commercial telegraph license and radar endorsement were also not very
>difficult. Such brain-strainers as "why do you avoid long horizontal
>sections of waveguide".

Why would you? :-)

>A commercial license is not a noble title indicating a licensee is
>"superior" to all other human beings (amateurs included) LOL

I've never stated that nor implied it was. However, a lot of hams
go on and on, terribly full of themselves, on implying that Their
accomplishment is academic PhD level stuff. :-) [ptui...]

Since 1958 I've been working in the microwaves, topping out at
the top of Ka Band (25 GHz) with only a brief time with some
2mm wavelength stuff where the waveguide had to be coin silver
electro-deposited on a polished copper mandrel (due to RF
surface conduction being too high a resistance with ordinary
silver plated guide...too much loss). I think of that lil-bitty guide
stuff as my "first SMT" exposure... :-)

A couple good reasons why amateur operations aren't widespread
at microwaves, particularly above X Band (greater than 12 GHz)
are Co$t of guide, flanges, measuring equipment, and RF sources;
there's no "magical" round-the-world bounce off the ionosphere as
with HF; so few amateurs know what they're doing at those very
short wavelengths (nearly all the present-day record setters have
commercial/military microwave experience).

One big plus at microwaves is that antenna gain can be terrific
due to beam-forming. Very little power is needed. Sure, there's
no "skip" at those frequencies, it's all line-of-sight, but eventually
there's going to be humans out there, far away. HF techniques
won't be good for interplanetary QSOs. :-)

That was fun when we went to our Big 50th high school reunion
of the Class of 1951. There was a four-decade no-contact period
between high school graduation and later. I would tell you more
but that is impossible in this particular private chat room
supposedly about amateur radio policy matters.

>I'm catching up fast - in the meantime, though, I'm a bit jealous :)

Don't be. All anyone needs to do is hang around the planet for
a while, plan in advance, and luck out... :-)

I think the idea is that the govt. knows they can't stop them from using illegal drugs, but the govt. can help stop the spread of disease by dirty needles.

>What it really does is save the
>junkie some money.

Very little, actually, because the junkie probably wasn't going to spend the money on clean needles anyway.
>
>>Does that really reduce the public burden of illegal drug abuse? I don't

Perhaps they're seeing one result of the Law of Unexpected Consequences. Could be that the availability of free clean needles in one place causes those interested to cluster there - which may be the real goal.

--

Remember Cecil, W5DXP/W6RCA? His take on the problem was that all "recreational" drugs should be legalized for adults. But if someone was caught providing them to minors, or caused problems while under the influence, the penalties would be much higher than today. IOW, if you want to get high, go ahead, but if you cause something bad to happen, don't try to use the drugs as an excuse.

OK, fine - but let's take that a step farther....

The consensus of opinion among all the MD's I've talked to says the following as a general plan-of-care:

1) Do not use illegal drugs of any kind

2) Do not use tobacco of any kind

3) Get your weight down to at least where the charts say "average"

4) Eat a healthy diet

5) Use seatbelts, helmets, eye/hearing protection and all other protective devices
where appropriate

How many people do all 5 consistently? How much public and private money is spent because so many people don't?

Here is one for ya Jim:

People who engage in risky behavior, such as rock climbing, bungee jumping, contact sports, mountain climbing, skateboarding, and other dangerous activity are doing so with knowledge of their potential injury/death. Why should society have to foot the bill when one of these idiots gets injured and can no longer support themselves. They made a presumably sober decision to do this.

note that this is a little tongue in cheek, but I do have a bit of a moral issue with this.

Baaaaaaaaaaaaaaaaaaaa.................
HA HA HA HA HA HA HA HA !!!

Hey have you been to any hamfests lately? (look around) :)
Been listening to 14.313 of late? (KJI from Indiana
is back on in the afternoon again, stirrin up things in the
truly unique way that only the 'kind jewish indian' can!)
How about 75 meters at night?

Hint: 14.313 is "re-starting again" folks!

I can name a few other freq's but U know them already.

"..faintly embarassing" they say? BOY OH BOY DID THEY
EVER GET THAT NAIL NAILED IN STRAIGHT AN
TIGHT INO THE WALL JOIST ! I don't admit to anyone
that I have a ham license, even some family.

As for stamp collecting, never been to one of those
shows, but if those stamp guys are as bung-holeo-retentive
as are the guys I've seen at train shows, I can understand 100%.

Now with all that said, I got me a Zip-Zap for X-mas.
Now leave me be whilst I torment the cat... ;)

"A professional politician is a professionally dishonorable man.

Hello, Len

Well, I never did have any Q&A manuals. I also never studied for any of the exams I took, including Novice, General, Amateur Extra, 2nd phone, and 2nd telegraph. I was simply up on the material (other than the band plans, which I learned through exposure as a Novice. Didn't help a bit when I retested in 93; I was quite wrong on at least where 40 meters was). The only study I did do was when I did fail the 1st phone and realized that I needed to know *exactly* what the numbers were to be. I must admit that the CW was a bit shaky in 1993 when I simply retested for everything through extra, however; I hadn't copied CW since 1969 (excluding the fact that I couldn't help myself when the Moose Cud was sent during the movie "Fantastic Voyage" back when ;)

I didn't mean to imply a slam against the commercial license; I did serve in 4 AM radio stations, 2 FM stations, and 2 television stations. Two stints as a disk jockey, all as an "engineer" (LOL), and one as chief engineer (5,000 watt am/fm station). Never forget the first job when I tore off the teletype from the A-P. Went to do the news (running late; didn't read everything. Crossed out some I wouldn't use) and the stupid thing took a hit and went into figures for about two sentences. Fortunately, serving for 4 years as a radioman in the Navy (much of it with teletype) allowed me to simply read it. Impressed the heck out of the guy breaking me in. Of course, I had to go clean my drawers out in the W.C. right after that :))

What is the logic behind your answer?

> As you seem to believe, character does count.
>
> So, Michael, please name one liberal (or "democrat") organization that
> promotes character in boys and yound men?

I know lots of Democrats that support the Boy Scouts, and lots of
independents. You take what SOME people who align themselves with the
Democrats do and apply that to the whole.

That is a losing game, as there are segments of Republicans that are
similarly fringy.

> I wish you the very best of luck on that one, and I do hope that you
> succeed.

So it is okay to be corrupt as long as you are a Republican. Good to
see where exactly you are coming from.
